Combination of Standard Model and beyond Standard model Higgs searches at CDF

Friday 23 July 2010 16:57 (20 minutes)

A combination of searches for Standard Model and beyond Standard Model Higgs boson production at CDF using a data sample up to 6.0 fb^{-1} of integrated luminosity is performed. For Standard Model searches we determine combined upper 95% C.L. limits on the ratio of the Higgs boson cross section times the branching ratio to its Standard Model prediction for Higgs boson masses between 100 and 200 GeV/c^2 .
