## Prospects for CP violation measurements with charmless hadronic B meson decays at LHCb gamma measurements

*Friday 23 July 2010 15:00 (11 minutes)*

Studies of two- and tree-body charmless hadronic decays of B mesons have high sensitivity to possible contributions from New Physics. Precision measurements involving these decays will be performed at LHCb, notably those of CP-violating asymmetries. These measurements benefit from a trigger system which is very efficient for hadronic final states and excellent particle identification capabilities. The full programme will be reviewed and first studies with 2010 data will be presented.

**Author:** LHCb, speaker's bureau (Institute for Theoretical and Experimental Physics (ITEP))

**Presenter:** DE BEDIAGA HICKMAN, Ignacio (Centro Bras. de Pesquisas Físicas (CBPF))

**Session Classification:** 06 - CP violation, CKM and Rare Decays

**Track Classification:** 06 - CP violation, CKM and Rare Decays
