Vision Report: Mzumbe University Participants

We are planning to do the following:

1. Dissemination of the knowledge, skills and experiences we have acquired in the CERN School training to librarians & IT staff at Mzumbe University through in-house training
2. Improve our Collection with OA resources that we learned.
   We have realized that there are so many resources available as OA for our scholars. We will make sure that we do our best to market the resources and encourage our researches to publish in OA gold or green.
3. World Digital Library: Communicating with UNESCO with an intention of adding Tanzania Local Information Content in the World Digital Library
4. Providing feedback to the Tanzania Ministry of Education and Vocational Training on what we learnt from the CERN School training such as the technology for OA, LMS, Tools for Big Data analytics (OPEN Refine), Digital library tools and Other information management tools that we have learned.
5. Implementing Elsevier DSpace API .
   From the presentation form Elsevier we noticed that there is potential benefits of integrating our Repository with Elsevier API so that we can reduce struggle of chasing contents. And if this will be successfully we can be sure that our repository becomes one of the best tool in showcasing our institution to the rest of the world.
6. Maintain the network we have at CERN.
