## Collectivity and MPI

*Thursday, 13 December 2018 18:00 (20 minutes)*

We develop a MPI based theory of ridge phenomena in  $\sqrt{s}$  MPI, the origin of collectivity comes out to be quantum interference of different MPIs. We show that in this approach we obtain a picture of ridge phenomena in pp collisions compatible both qualitatively and quantitatively with experimental data.

the talk is based on:

Collectivity from interference
