

Recent developments in Kaon physics

Wednesday 17 April 2019 11:00 (25 minutes)

I review rare kaon decays in the LHC era: we discuss interplay with B-anomalies and possible New Physics in direct CP violation in $K \rightarrow \pi \nu \bar{\nu}$; 2π : very rare kaon decays like $K \rightarrow \pi \nu \bar{\nu}$; $\pi \nu \bar{\nu}$ are very important to this purpose We discuss also the decays $K \rightarrow \mu \bar{\mu}$ due to the LHCb measurement
