

Flavor Phenomenology of the QCD Axion

Thursday 18 April 2019 09:50 (25 minutes)

I will discuss theoretical and phenomenological aspects of flavor-violating couplings of the QCD axion. Such couplings arise whenever SM fermions carry flavor non-universal Peccei-Quinn charges, and allow to look for the QCD axions also with high-precision flavor experiments, complementarily to usual searches with halo- and helioscopes.
