# FADC Readout Electronics

<b>Num. of Channels</b>	<b>2</b>
<b>Sampling Rate</b>	<b>1 GSPS</b>
<b>Resolution</b>	<b>14-Bit</b>
<b>ENOB</b>	<b>~9.8 (@10MHz)</b>
<b>Readout Module</b>	<b>XC7Z020 CLG400</b>

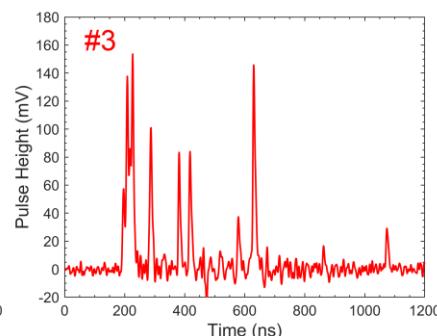

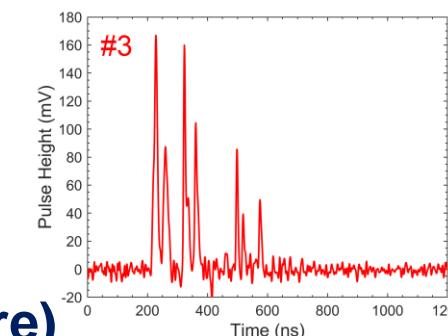

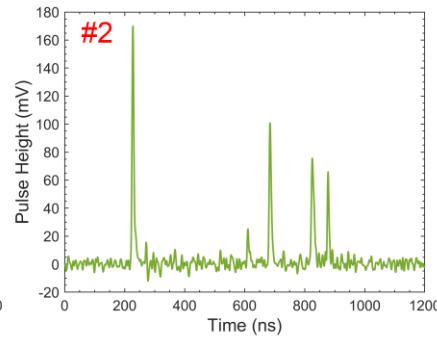

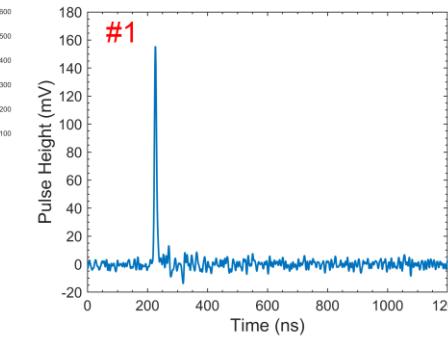

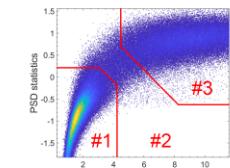

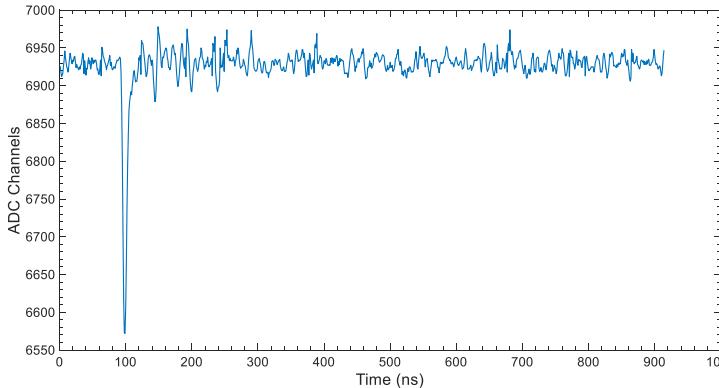

# Discrimination Results

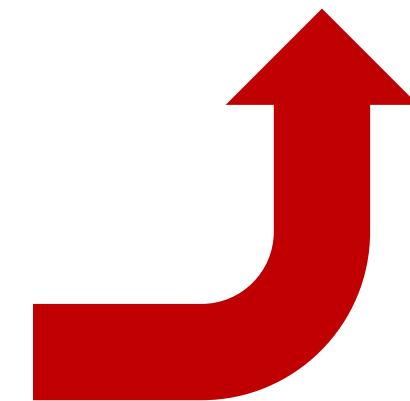

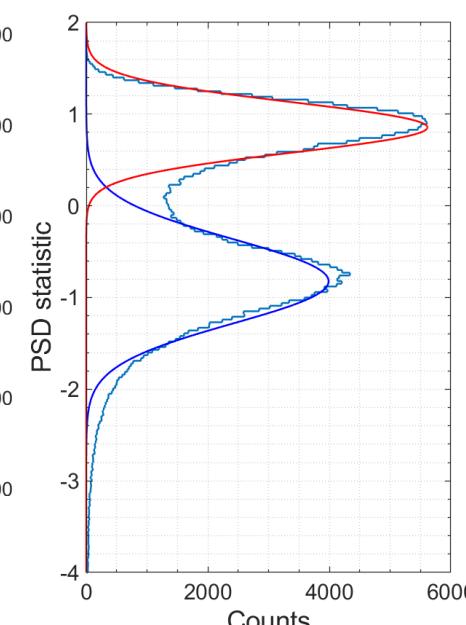

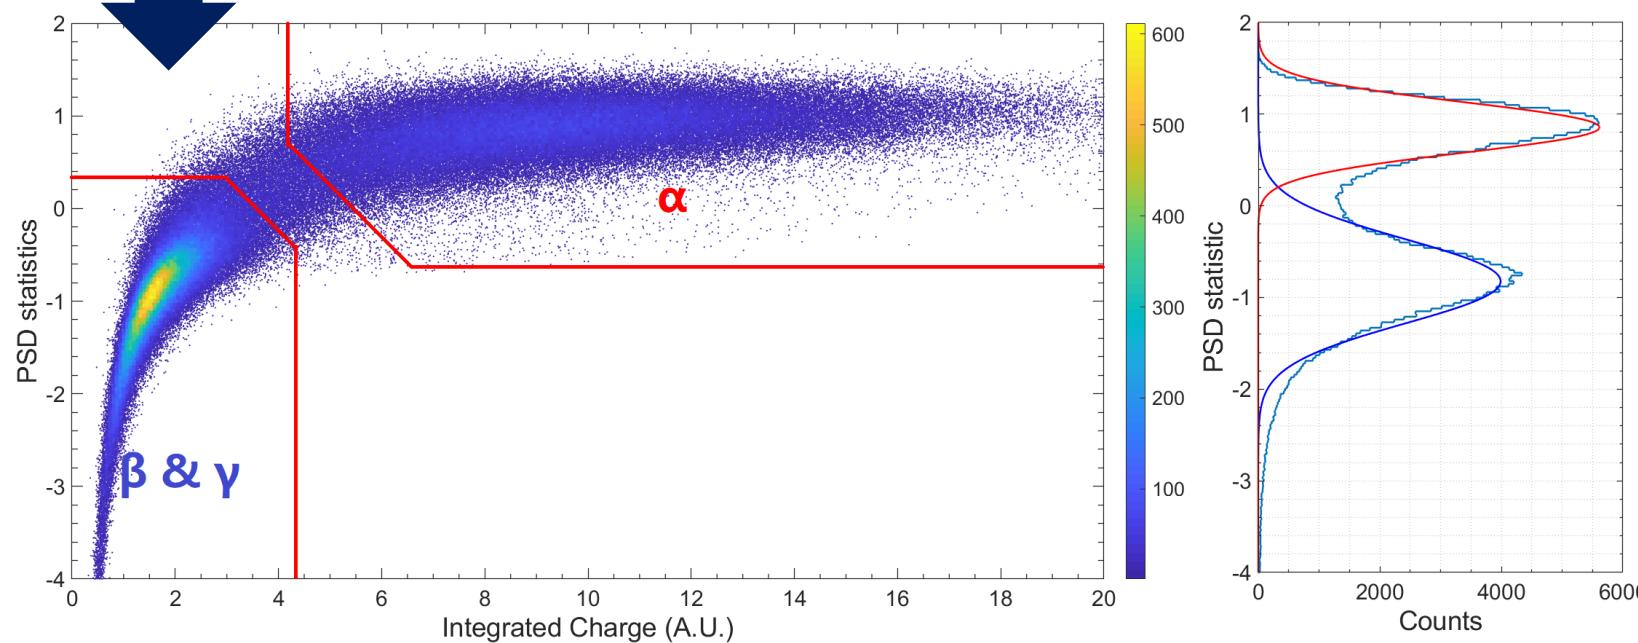

Typical  $\alpha$  signal

Typical  $\gamma/\beta$  signal

Preliminary discrimination results (Based on least-square)

Data from Am-241 experiment

# Conclusions

- Design and validate a dual channel FADC readout system for the tap water  $\alpha/\beta$  dose real-time monitoring system.
- The FADC readout system can provide both high sampling (1 GSPS) and optimum ENOB (9.7 Bits at 10 MHz).
- The system is based on a ZYNQ SoC module (ZynqBee2), which provides both high data throughput and excellent flexibility.
