

UNIVERSITY OF TWENTE.

Contribution ID: 35

Type: **not specified**

S’Cool Lab: group C and D

In a student-friendly environment, the participants will construct their own particle detector: a cloud chamber! The techniques and materials used to build the detector are amazingly simple and the participants will be flabbergasted by the results they obtain in this relatively short time. A wonderful experience which is always very much appreciated by the students!

Session Classification: Workshops
