

XV HXSWG General Assembly

Concluding remarks

The HXSWG Steering Committee

- We thank CERN and LPCC for the local and financial support
- Many thanks to all the participants and especially to the WG conveners for their talks and for leading the discussions
- Novelty for this edition: 5 parallel discussion sessions where specific topics could be discussed in more detail
- The feedback is positive and we plan to have such sessions also in the next meeting
- HL-HE WG2 report towards completion with important contribution from HXSWG community

Plans

After almost 10 years from its foundation the HXSWG should continue to be the open forum where theoretical results and tools relevant to Higgs physics can be scrutinised and discussed in order to produce consensus and eventually the recommendations to be adopted by ATLAS and CMS

- There is consensus that HH activities are getting more and more important and should receive more space in the future
- No plans for a YR5 for the moment !
- Results/recommendations should be documented through internal notes/official reports (all details on our twiki page)
 - reviewed by WG conveners & SC
 - can be cited by exp. collaborations
 - can be submitted to the arXiv

Mark your calendar !

- Proposed dates for next General Assembly meeting:

~~October 2-4 2019~~

October 16-18 2019

- Please let us know if you see major problems with these dates

- Please let us know your feedback on any issue related to the HXSWG !
