

L2 Tau Trigger Report

A.Florez, M.Bachtis

November 12 2009

Samples

- I am using the following data samples:

- **ZTT** :

tteff_octoberX_Ztautau_Summer09_MC_31X_V3_v1.root

It has 251786 entries

- **Wmunu** :

tteffAnalysis_Wmunu_Summer09_MC_31X_V3_v1_GEN_SIM_RE
CO_Skim_run2.root

It has 646918 entries

Efficiency Definition

The Reconstruction efficiency (L2RecoEff) is measured using:

Numerator =

$$\text{PFTauIso}==1 \ \&\& \ \text{PFTauEt} > 15 \ \&\& \ \text{abs}(\text{PFTauEta}) < 2.5 \ \&\& \ (\text{PFTauProng}==1 \ || \ \text{PFTauProng}==3) \ \&\& \ (\text{hasMatchedL1TauJet} \ \&\& \ \text{L1JetEt} > 30 \ || \ \text{hasMatchedL1CenJet} \ \&\& \ \text{L1JetEt} > 60) \ \&\& \ \text{L2JetEt} > 15$$

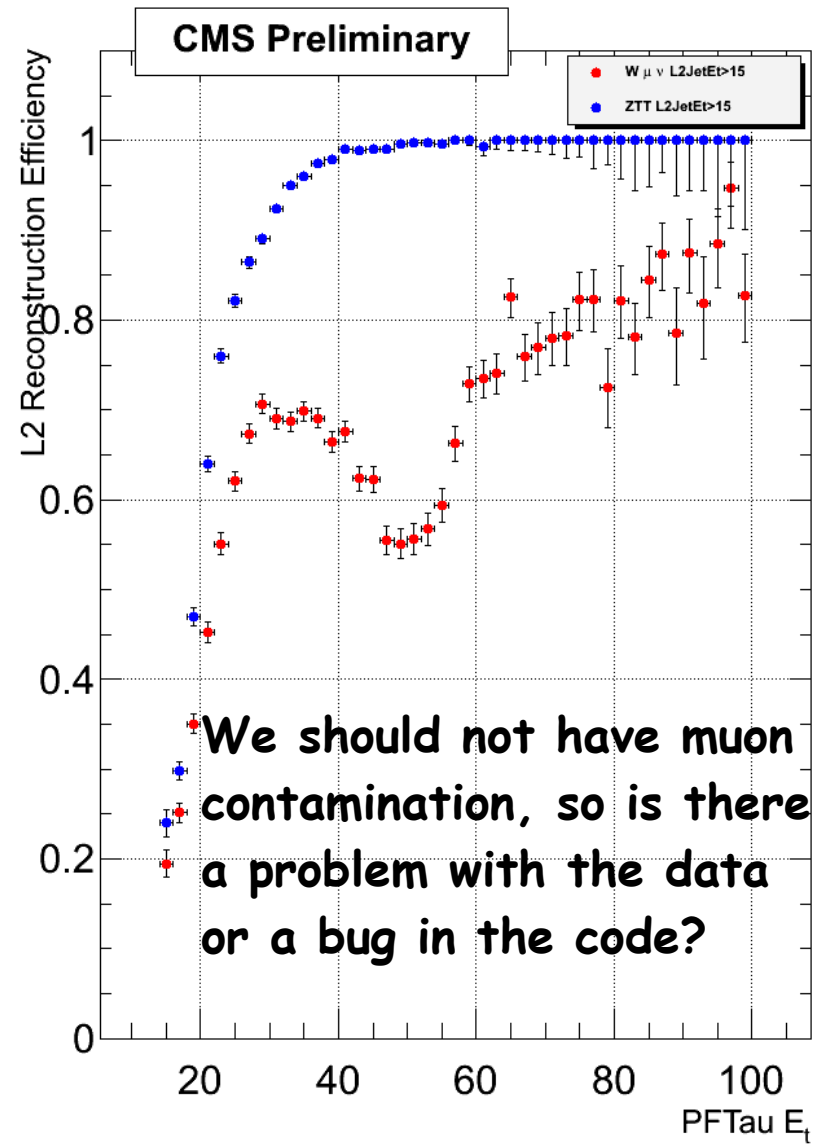

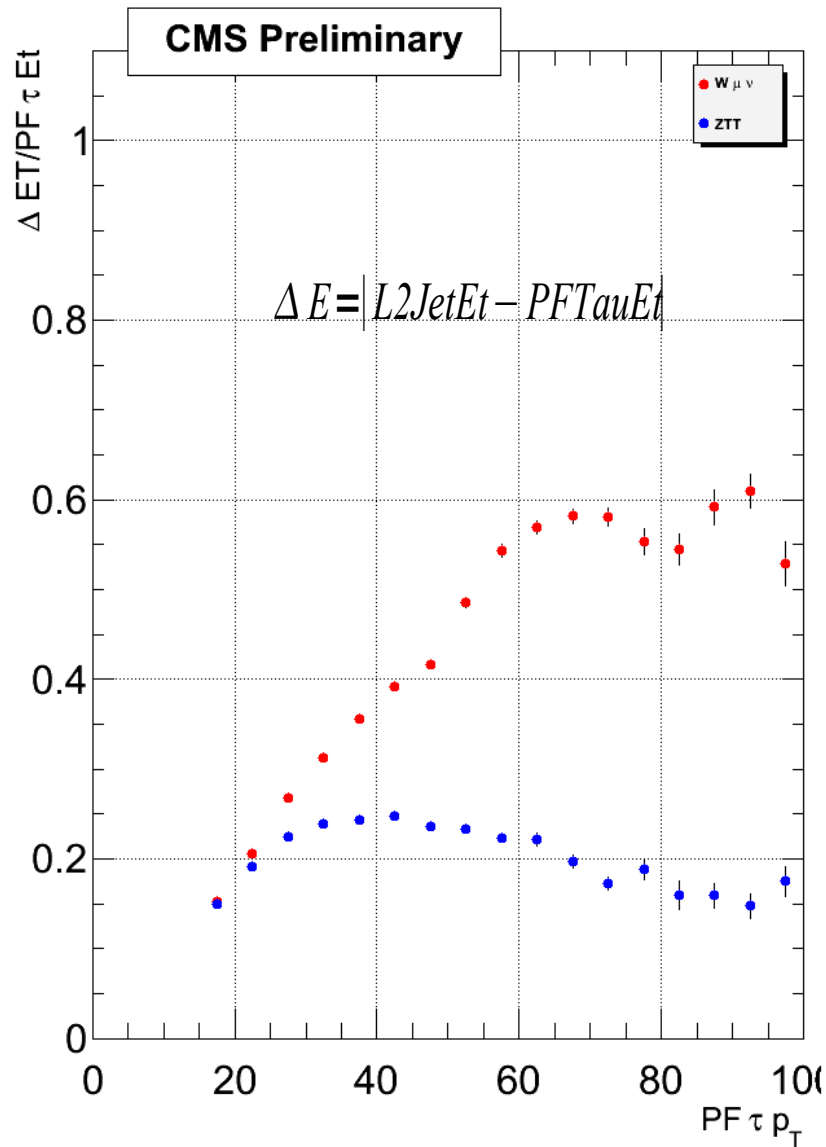

Denominator =

$$\text{PFTauIso}==1 \ \&\& \ \text{PFTauEt} > 15 \ \&\& \ \text{abs}(\text{PFTauEta}) < 2.5 \ \&\& \ (\text{PFTauProng}==1 \ || \ \text{PFTauProng}==3) \ \&\& \ (\text{hasMatchedL1TauJet} \ \&\& \ \text{L1JetEt} > 30 \ || \ \text{hasMatchedL1CenJet} \ \&\& \ \text{L1JetEt} > 60)$$

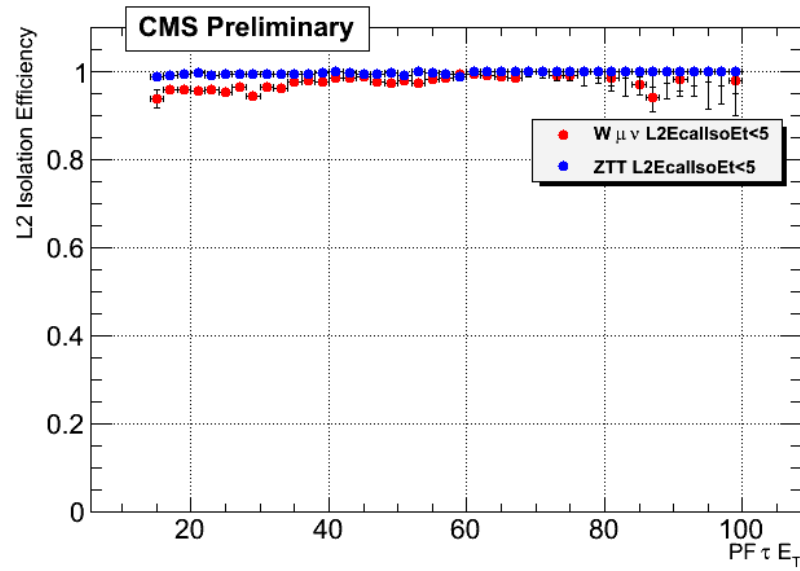

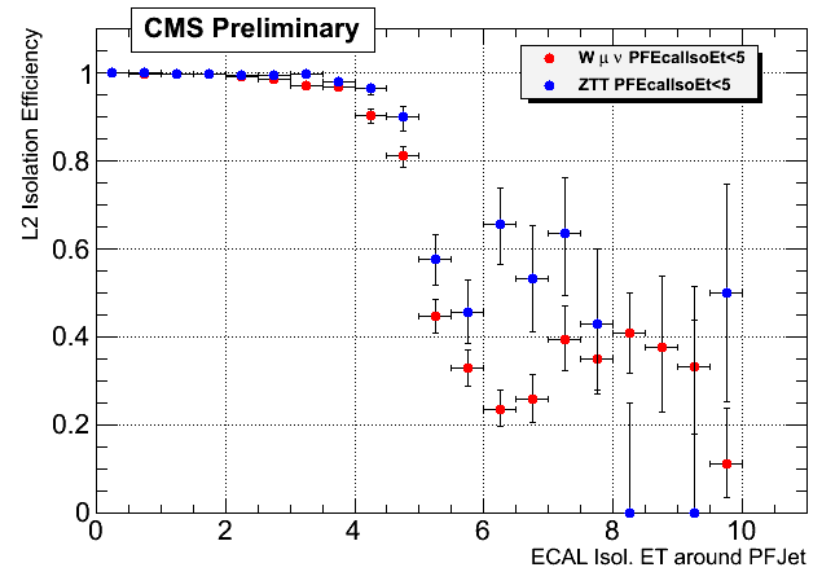

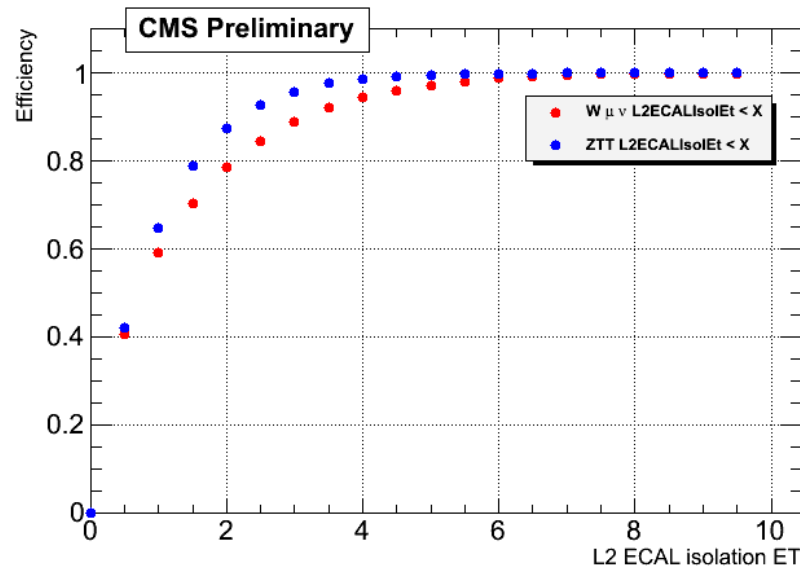

The L2 Isolation efficiency is:

$$\text{L2IsoEff} = \text{L2RecoEff} \times \text{L2JetEt} > 15$$

L2 Reconstruction

L2 Isolation

L2 Isolation efficiency looks fine
