

## **Study on temperature dependent EBSD measurements**

*Thursday 8 November 2018 14:10 (10 minutes)*

We started EBSD measurements, which can be observed while changing temperature of Nb samples in a chamber. We expect measurements on grain orientation, stress and dislocation can give us important information to understand pinning center and flux expulsion

**Presenter:** Dr UMEMORI, Kensei (KEK)

**Session Classification:** Flux expulsion efficiency
