

BSM Higgs results from ATLAS

Monday, 20 May 2019 16:20 (30 minutes)

Searches for Higgs bosons in different extensions of the Standard Model (SM) are presented. These include models with additional scalar singlets, doublets, or triplets, and generic searches for models with couplings modified with respect to the SM or for non-SM Higgs boson decay channels. Results are based on data collected by the ATLAS in 2015 and 2016 at the LHC.

Presenter: SU, Dong (SLAC National Accelerator Laboratory (US))

Session Classification: Electroweak, Top and Higgs Physics

Track Classification: Electroweak, Top and Higgs Physics
