

IR fixed point pattern of couplings in the MSSM+1VF

Wednesday 22 May 2019 17:20 (15 minutes)

I will discuss an intriguing observation that the values of all the couplings in the standard model except those related to first two generations can be understood from the IR fixed point structure of renormalization group equations in the minimal supersymmetric model extended by one complete vectorlike family with the scale of new physics in a multi-TeV range.
