27th International Conference on Supersymmetry and Unification of Fundamental Interactions (SUSY2019)

Contribution ID: 229 Type: Oral

Is SUSY hiding from us?

Thursday 23 May 2019 16:20 (25 minutes)

Experiments at the LHC have not yet seen any direct signs of superpartners.

Many authors have suggested mechanisms that reduce the SUSY reach of the LHC from its canonical expectation. After a lightning review of these, I will reexamine the fine-tuning arguments that led to these canonical expectations and argue that the non-appearance of superpartners may not be at odds with SUSY naturalness. I will conclude with an outlook for natural SUSY at the proposed luminosity and energy upgrades of the LHC.

Author: Prof. TATA, Xerxes (U. of Hawaii)

Presenter: Prof. TATA, Xerxes (U. of Hawaii)

Session Classification: Supersymmetry: Models, Phenomenology and Experimental Results

Track Classification: Supersymmetry: Models, Phenomenology and Experimental Results
