## Cross-sections of Light Nuclei in the Glauber-Gribov representation

*Wednesday, 24 April 2019 11:40 (30 minutes)*

The Glauber-Gribov approach (corrections for both elastic and inelastic nucleon screening) is considered for the description of light nucleus-nucleus cross-sections. It was found that electromagnetic nucleus radii are result in better description of measurements. The calculations are compared with experimental data for the reaction cross-sections
