The image shows a Google search interface. On the left is the Google logo. To its right is a search bar containing the text "Who am I". A magnifying glass icon is on the right side of the search bar. Below the search bar is a horizontal menu with the following items: "Tous" (underlined), "Images", "Vidéos", "Maps", "Actualités", "Plus", "Paramètres", and "Outils". Below the menu, the text "Environ 6 730 000 000 résultats (0,61 secondes)" is displayed.

Who am I ?

The Geant val project

- Was originally created for the simplified calorimeter test.
- Need to organize Geant4 test results regression testing.
- Development of a tool that can provide :
 - Visual comparison
 - Statistical tests

Geant val V1

- **Features**

- Automated statistical comparison of one test between two versions of Geant4.
- Menu to pick some test parameters and display the corresponding data.
- User defined layouts to display organised plots on one page.
- It works ! (Important !)

- **Technology**

- Client: AngularJS
- Server: NodeJS + Express
- Database: PostgreSQL

test37 ▾

- filter menu entries
- validation mode -- χ^2 test
- ROOT plots JSROOT plots

Geant val V1

- **Features**

- Automated statistical comparison of one test between two versions of Geant4.
- Menu to pick some test parameters and display the corresponding data.
- User defined layouts to display organised plots on one page.
- It works ! (Important !)

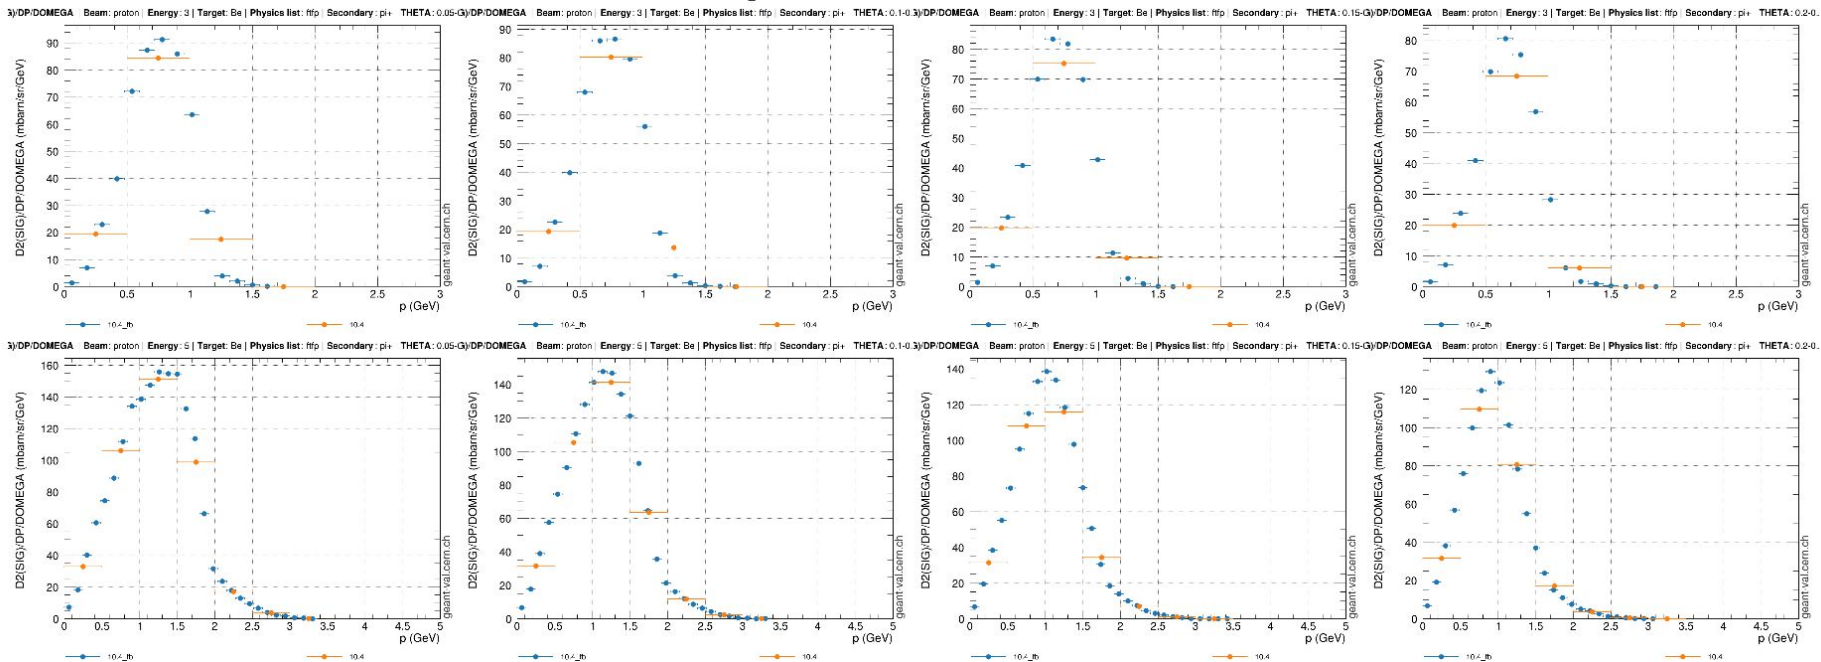

- **Technology**

- Client: AngularJS
- Server: NodeJS + Express
- Database: PostgreSQL

User layouts

$$\text{proton} + \text{Be} \rightarrow \pi^+ + X$$

Geant val V1

- **Features**

- Automated statistical comparison of one test between two versions of Geant4.
- Menu to pick some test parameters and display the corresponding data.
- User defined layouts to display organised plots on one page.
- It works ! (Important !)

- **Technology**

- Client: AngularJS
- Server: NodeJS + Express
- Database: PostgreSQL

Why developing a new version ? (It takes time !!)

- AngularJS is not developed anymore. The long time support will end in 2021.
- AngularJS has big performance issues. (Displaying a lot of plots is a heavy task)
- The backend was originally developed for the simplified calorimeter test :
 - The parameter list is hardcoded in the database schema.
 - Workarounds are sometimes needed to implement other tests.
 - Developing new features in the client is hard because the data structure wasn't built to handle different tests.

Design choices for Geant val V2

- **Data structure** : No assumption on the parameters the tests are using
 - No hard coded parameters.
 - Easy way to add new parameters for new tests.

- **New client features**
 - User account interface to manage tests and data.
 - Template generator to avoid writing xml templates manually (with real time preview)

- **Technology**
 - Angular 2+ (Today: Angular 6)
 - Node + Loopback (Saves a lot of time on basic API implementation)

Technology - Loopback

- Node framework for REST API creation
- Avoids having to create basic expected REST API features
 - Prebuilt user management
 - Auto-generated REST endpoints

Technology - Angular

- Front-end javascript framework (concurrents : React, Vue)
- Allows to create reusable components (page parts)
 - Easier unit testing
 - Encapsulated styling and behavior
- Uses typescript
 - Alternative to javascript that uses types.
 - Better static checking
 - Forces the developer to write better code.
 - Is transpiled to javascript to be used in the browser.
- **It's not AngularJS !**

Template generator

- Allows users to create their own layouts to compare data.
- As easy to use as possible, but still flexible.
- Works better with structured data.

Template generator

- Display all plots
- Secondary particle = pi+
- Secondary particle = pi-

Template generator - next features

- Possibility to select experimental data to compare your test with (and maybe with similar tests).
- 'Save', 'Export' and 'Load' buttons to save your templates to build them only once.

Other front-end features not implemented yet :

- Statistical comparison of plots. Could use a menu similar to the template generator.
- A “Free template” generator to build more complex templates.
 - The user doesn't need to create regular rows, columns.
 - The template creation will take more time (needs a working 'save' feature)
