

Particle Colliders - Accelerating Innovation

Contribution ID: 1

Type: **not specified**

Welcome

Friday, 22 March 2019 10:30 (10 minutes)

Particle accelerators have numerous applications across many fields including fundamental research, medicine, electronics, environment and energy. As the limits of performance are reached new methods for particle acceleration and beam optimisation are needed. This requires technology breakthroughs that can then also benefit many other science and society applications.

This talk will present the motivation and context for this international Symposium.

Presenter: Prof. WELSCH, Carsten Peter (Cockcroft Institute / University of Liverpool)
