

My name is Zuzana Moravcová and I am from Slovakia, but currently living in Czech Republic where I study at Faculty of Nuclear Sciences and Physical Engineering of Czech Technical University in Prague. My field is experimental nuclear and particle physics, I just finished my first year of master with D mesons analysis on STAR experiment (Brookhaven National Laboratory).

During the CERN Summer School, I joined the ALICE TOF team where I am working on cosmics analysis. Once I am back in Prague, I have a year of master left after which I am planning to start a PhD.

Being a summer student was an amazing opportunity. First of all, I could have worked and lived in an international team which was a new experience for me and I really enjoyed it. Working in CERN was also very stimulating, because you realize daily that you are working with the brightest minds in the world. Last but not least, the location (mountains and lake) is absolutely amazing.
