

My name is Pieter Braat and I'm a Dutch student from Amsterdam, who just finished his bachelor's degree in Physics and Astronomy at the University of Amsterdam. This summer I'm working with the LHCb group, and my research focuses on CEP $J/\psi \rightarrow ee$ events in order to better understand the electron reconstruction of the LHCb detector.

After this summer I'll start my master's degree in Amsterdam as well, specialised in gravitational and (astro)-particle physics. What I liked most about my stay here, is meeting new people from all across the globe, and getting in touch with people from cultures I had never met before.
