

Name	Dan Bosworth
Country	UK
University	University of Exeter
Study	Masters degree in Physics
Work at CERN	I've been working in the CMS GEM (Gas Electron Multiplier) detector production lab. Here, the team fabricates detectors and performs quality control tests to ensure they are functioning properly. My work focuses on studying the long-term effects of radiation on the functioning of the detectors.
Plans after CERN	I'll go back to university to finish my Masters! Then I plan on taking a gap-year before starting a PhD. I'm not sure which subject I would like to research in, but it will probably be a theoretical project.
What I enjoyed most	The food. The beautiful surroundings. The many amazing people I've met from around the world and all the new things I've been able to try since being here.
