

NLO Corrections to Heavy Flavour Distributions in Polarized Deep-Inelastic Scattering

Felix Hekhorn and Marco Stratmann

Institute for Theoretical Physics, University of Tübingen

April, 2019

Torino, Italy

[for a wide introduction see *Phys.Rev. D98 (2018) no.1, 014018* or *PoS DIS2018 (2018) 155*]

1 Introduction

2 Distributions

3 Neutral Current Contributions

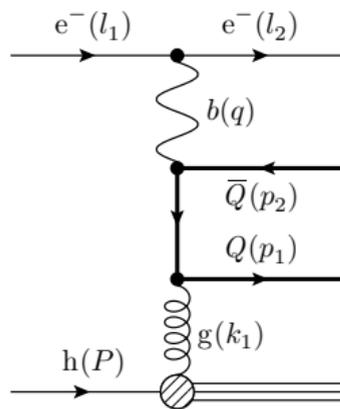

4 Outlook

- Heavy Quarks (HQ): $c(m_c = 1.5 \text{ GeV})$, $b(m_b = 4.75 \text{ GeV})$, $t(m_t = 175 \text{ GeV})$
- unpolarized case HERA@DESY: at small $x \sim 30\%$ charm contributions
[Laenen,Riemersma,Smith,van Neerven]
- EIC will reach region with HQ relevant to structure functions

- Heavy Quarks (HQ): $c(m_c = 1.5 \text{ GeV})$, $b(m_b = 4.75 \text{ GeV})$, $t(m_t = 175 \text{ GeV})$
- unpolarized case HERA@DESY: at small $x \sim 30\%$ charm contributions
[Laenen,Riemersma,Smith,van Neerven]
- EIC will reach region with HQ relevant to structure functions
- measure Δg as dominated by photon-gluon fusion (PGF)
- first full NLO computation of polarized process [Blümlein,Falcioni,De Freitas]
[Buza,Matiounine,Smith,van Neerven] [Bojak,Stratmann] [Vogelsang]

- Heavy Quarks (HQ): $c(m_c = 1.5 \text{ GeV})$, $b(m_b = 4.75 \text{ GeV})$, $t(m_t = 175 \text{ GeV})$
- unpolarized case HERA@DESY: at small $x \sim 30\%$ charm contributions
[Laenen,Riemersma,Smith,van Neerven]
- EIC will reach region with HQ relevant to structure functions
- measure Δg as dominated by photon-gluon fusion (PGF)
- first full NLO computation of polarized process [Blümlein,Falcioni,De Freitas]
[Buza,Matiounine,Smith,van Neerven] [Bojak,Stratmann] [Vogelsang]
- need improved charm tagging
- no hadronization here

$$e^-(l_1) + h(P) \rightarrow e^-(l_2) + \bar{Q}(p_2) + X[Q]$$

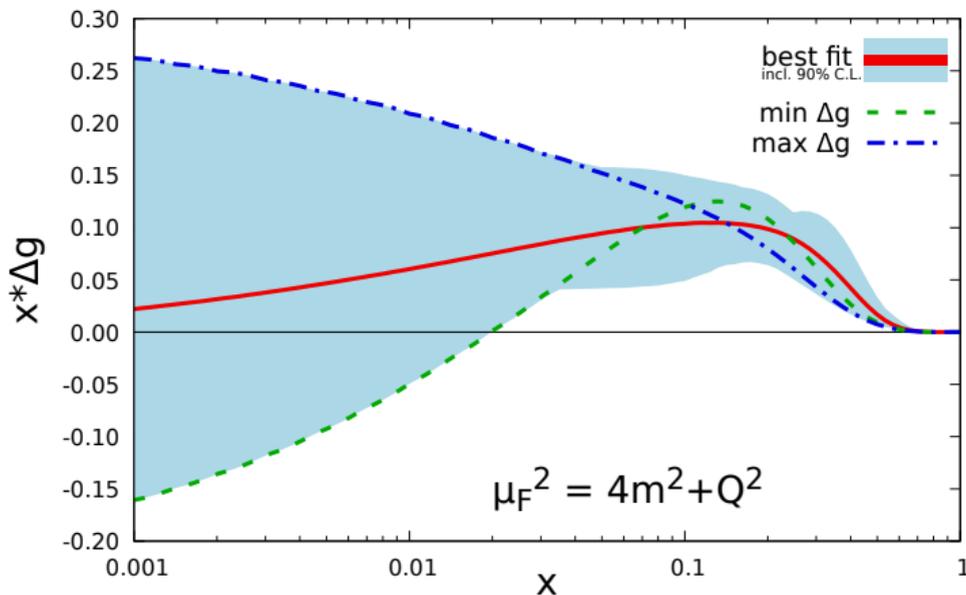

- $x = \frac{Q^2}{2q \cdot P}$ and $Q^2 = -q^2 = -(l_1 - l_2)^2$
- massless lepton/hadron $l_1^2 = 0 = P^2$
- parity conserving
 - unpolarized: F_1, F_2
 - polarized: g_1
- parity violating
 - unpolarized: F_3
 - polarized: g_4, g_5
- use cms of b^*h with $\vec{P} \sim \hat{z}$

- use factorization theorem:
- compute partonic matrix elements ($\gamma_5 \rightarrow$ variant of Larin-scheme [Larin]
[Moch, Vermaseren, Vogt])

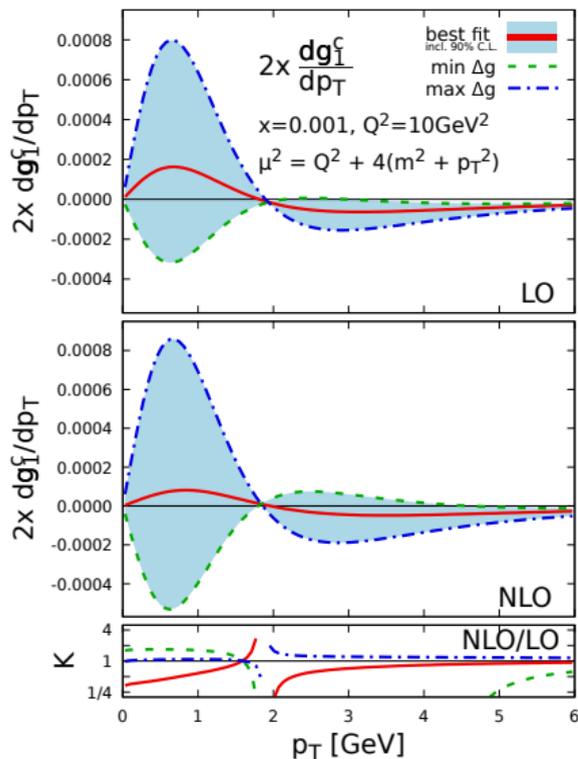

- use factorization theorem:
- compute partonic matrix elements ($\gamma_5 \rightarrow$ variant of Larin-scheme [Larin]
[Moch,Vermaseren,Vogt])
- compute phase space
 - phase space slicing (Δ) [Laenen,Riemersma,Smith,van Neerven]
 \rightarrow inclusive distributions: $\rho_{T,\bar{Q}}, \mathcal{Y}_{\bar{Q}}$
 - plus distributions (ρ, ω) [Harris,Smith] \rightarrow Monte Carlo Event Generator
 \rightarrow any distribution

- use factorization theorem:
- compute partonic matrix elements ($\gamma_5 \rightarrow$ variant of Larin-scheme [Larin]
[Moch,Vermaseren,Vogt])
- compute phase space
 - phase space slicing (Δ) [Laenen,Riemersma,Smith,van Neerven]
 \rightarrow inclusive distributions: $\rho_{T,\bar{Q}}, \mathcal{Y}_{\bar{Q}}$
 - plus distributions (ρ, ω) [Harris,Smith] \rightarrow Monte Carlo Event Generator
 \rightarrow any distribution
- structure function = $\int \text{PDF} \otimes \text{ME} d\text{PS}$

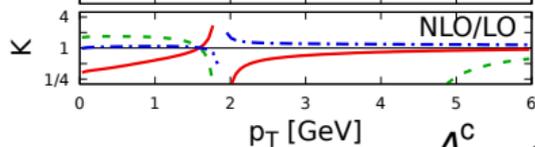

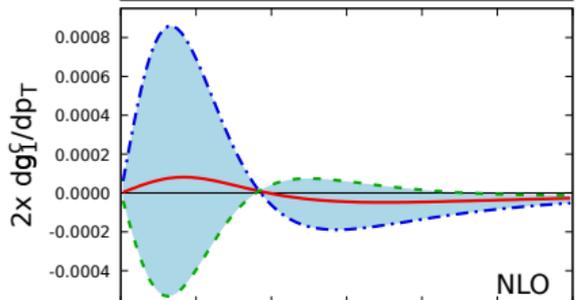

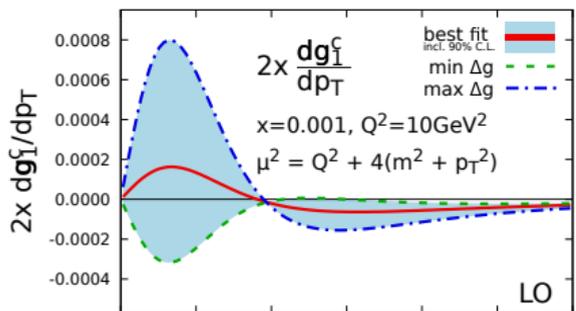

- use \bar{c} -quark and DSSV2014_[de Florian,Sassot,Stratmann,Vogelsang]

Distributions - Transverse Momentum (I)

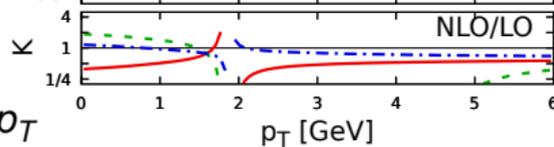

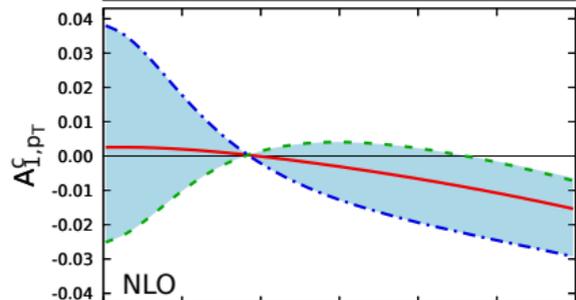

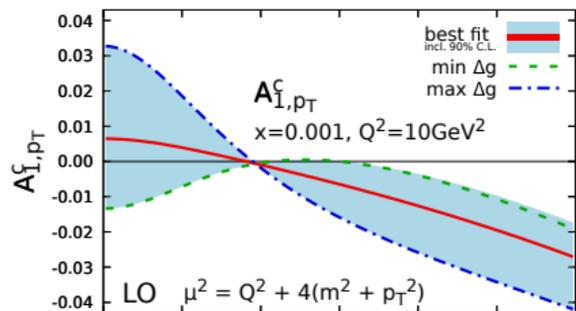

Distributions - Transverse Momentum (I)

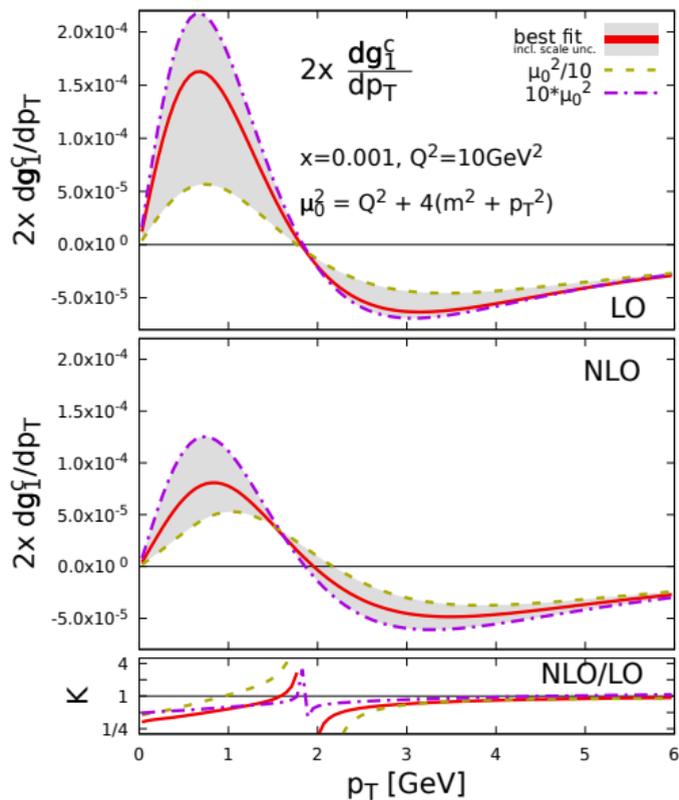

$$A_{1,p_T}^c = \frac{dg_1^c/dp_T}{dF_1^c/dp_T}$$

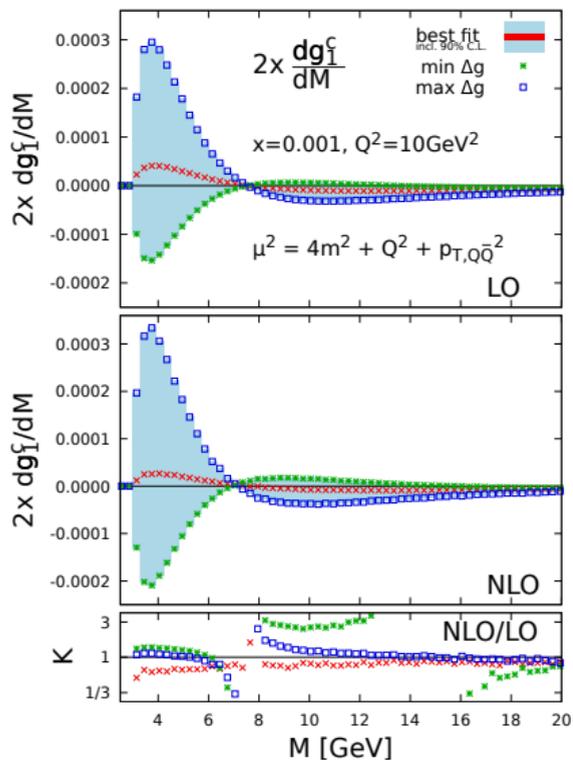

→

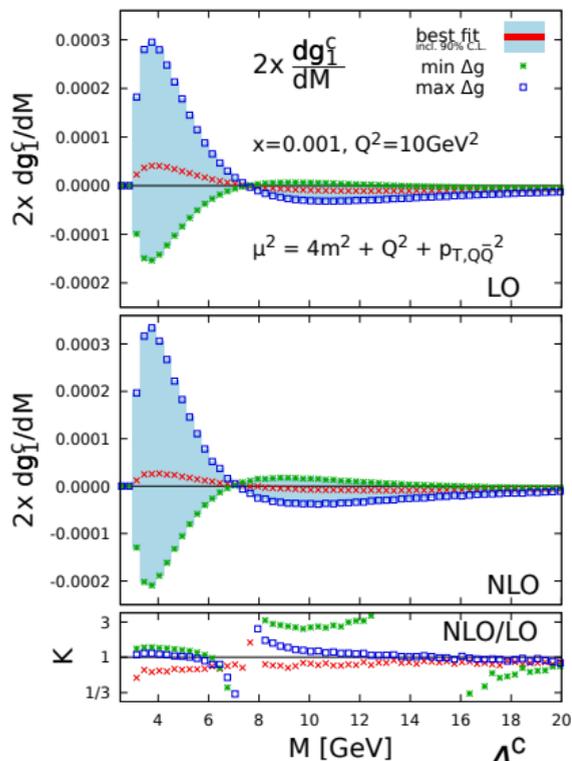

Distributions - Transverse Momentum (II)

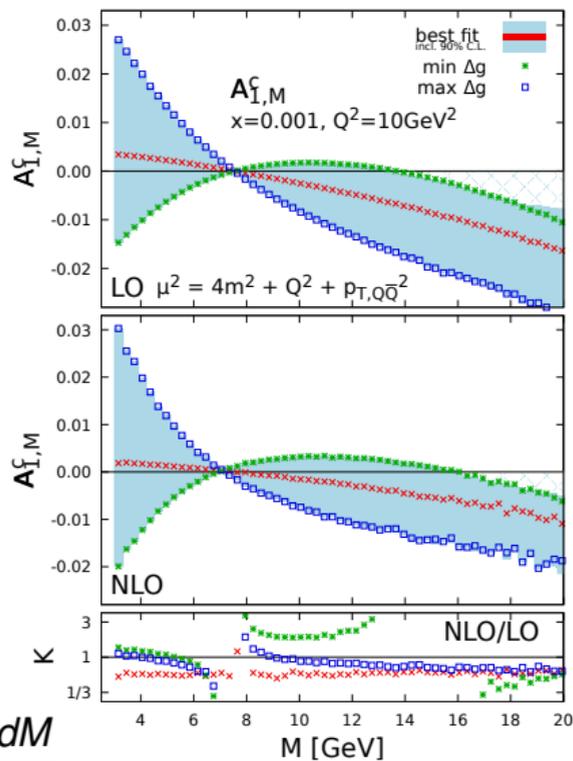

Distributions - Pair Mass

Distributions - Pair Mass

→

$$A_{1,M}^C = \frac{dg_1^C/dM}{dF_1^C/dM}$$

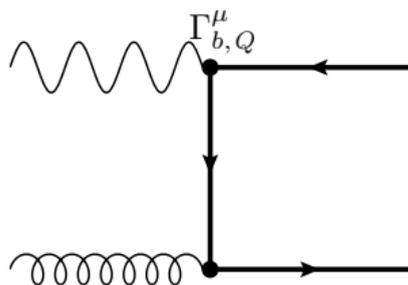

Neutral Current - Full Neutral Current DIS

define coupling of vector boson $b(q)$ to fermion f : $-ie\Gamma_{b,f}^\mu$ with

$$\Gamma_{b,f}^\mu = g_{b,f}^V \Gamma_V^\mu + g_{b,f}^A \Gamma_A^\mu = g_{b,f}^V \gamma^\mu + g_{b,f}^A \gamma^\mu \gamma^5, \quad b \in \{\gamma, Z\}, f \in \{\ell, q, Q\}$$

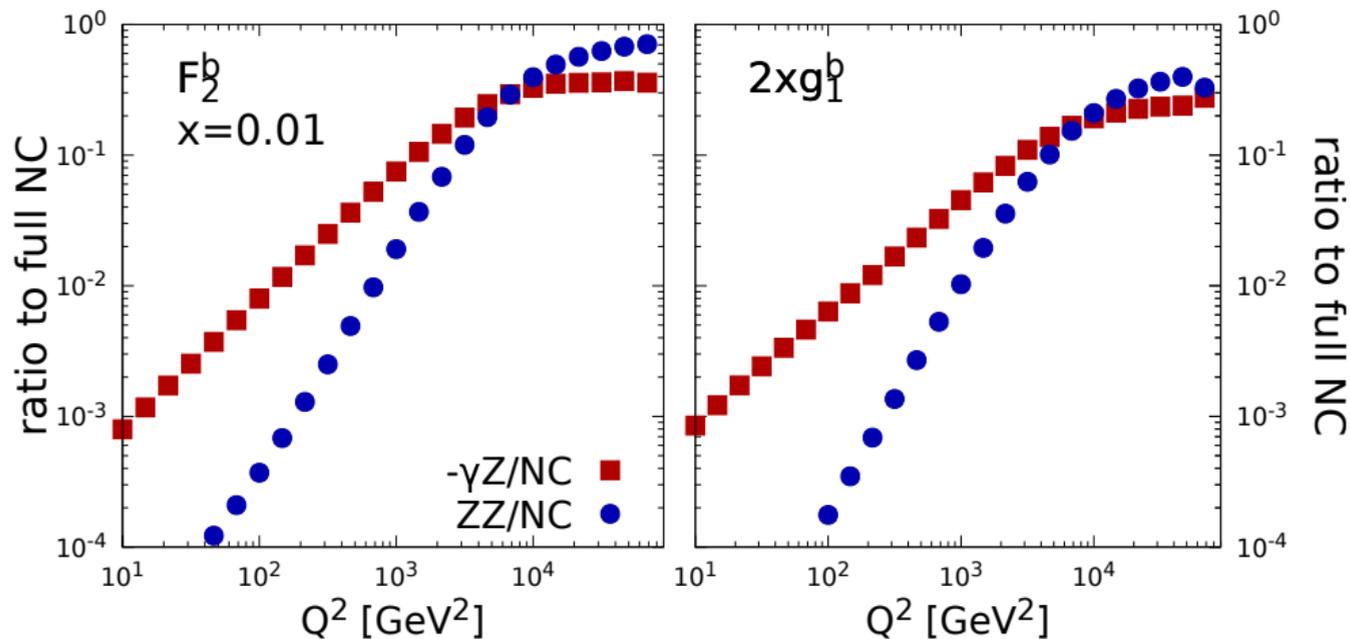

decompose partonic coefficient functions by vector/axial-vector currents:

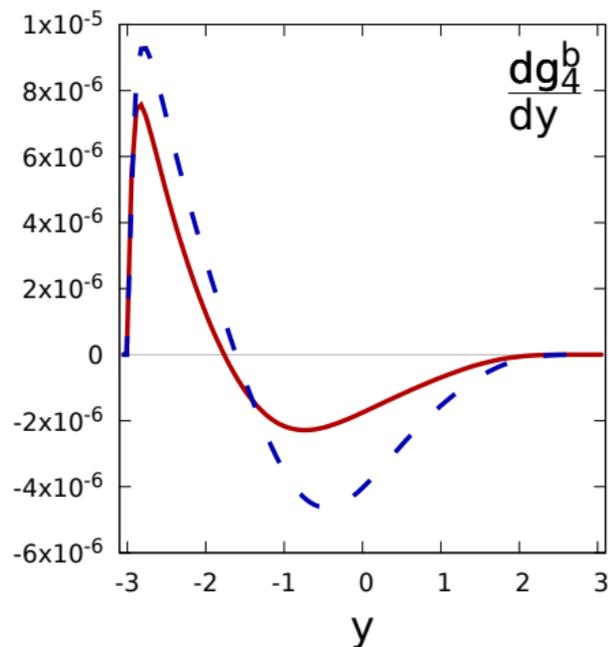

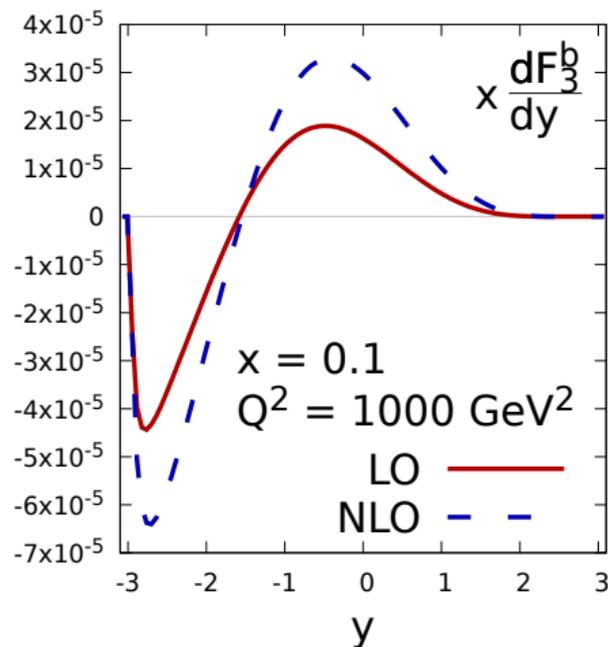

$$\begin{aligned} & B_{F_1}^{VV}, B_{F_2}^{VV}, B_{g_1}^{VV} \\ & B_{F_3}^{VA}, B_{g_4}^{VA}, B_{g_5}^{VA} \\ & B_{F_1}^{AA}, B_{F_2}^{AA}, B_{g_1}^{AA} \end{aligned}$$

now: change to \bar{b} -quark and use NNPDF sets [NNPDF Collaboration]

Neutral Current - Fully Inclusive Structure Functions

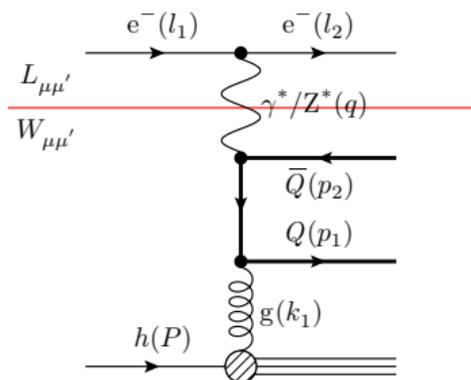

Neutral Current - Distributions

- add (physical) cuts
- move to leptonic reference frame
- add fragmentation, e.g. $\bar{c} \rightarrow D$
- join extensions $\rightarrow \frac{dg_1^{NC}}{dp_T}$

- add (physical) cuts
- move to leptonic reference frame
- add fragmentation, e.g. $\bar{c} \rightarrow D$
- join extensions $\rightarrow \frac{dg_1^{NC}}{dp_T}$

Thank you for your attention!

Deep Inelastic Scattering:

$$e^-(l_1) + h(P) \rightarrow e^-(l_2) + \bar{Q}(p_2) + X[Q]$$

$$d\sigma \sim L^{\mu\mu'} W_{\mu\mu'} \text{ with } \hat{P}_\mu = P_\mu - \frac{P \cdot q}{q^2} q_\mu$$

$$W_{\mu\mu'} = \left(-g_{\mu\mu'} + \frac{q_\mu q_{\mu'}}{q^2} \right) F_1 + \frac{\hat{P}_\mu \hat{P}_{\mu'}}{P \cdot q} F_2 - i \varepsilon_{\mu\mu'\alpha\beta} \frac{q^\alpha P^\beta}{2P \cdot q} F_3$$

$$+ i \varepsilon_{\mu\mu'\alpha\beta} \frac{q^\alpha S^\beta}{P \cdot q} g_1 + \frac{S \cdot q}{P \cdot q} \left[\frac{\hat{P}_\mu \hat{P}_{\mu'}}{P \cdot q} g_4 + \left(-g_{\mu\mu'} + \frac{q_\mu q_{\mu'}}{q^2} \right) g_5 \right]$$

[PDG]

$$\{\gamma_5, \gamma_\mu\} = 0$$

$$\gamma_5 = \frac{i}{4!} \varepsilon_{\mu\nu\rho\sigma} \gamma^\mu \gamma^\nu \gamma^\rho \gamma^\sigma$$

t'Hooft-Veltman-Breitenlohner-Maison:

$$\{\gamma_5, \gamma_\mu\} = 0$$

$$\mu = 0, 1, 2, 3$$

$$[\gamma_5, \gamma_\mu] = 0$$

otherwise

Larin:

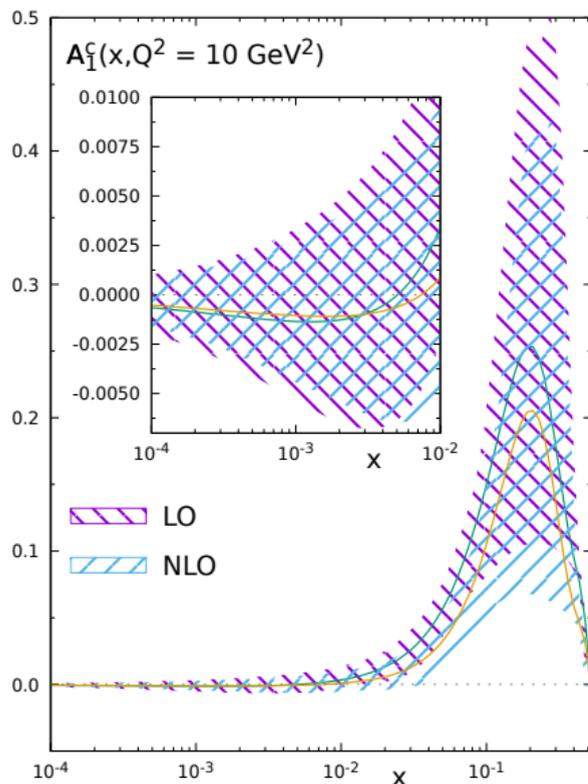

$$\gamma_\mu \gamma_5 = \frac{i}{6} \varepsilon_{\mu\nu\rho\sigma} \gamma^\nu \gamma^\rho \gamma^\sigma$$

$$\varepsilon_{\mu\nu\rho\sigma} \varepsilon^{\alpha\beta\gamma\delta} = \begin{vmatrix} \delta^\alpha_\mu & \dots \\ \vdots & \ddots \end{vmatrix} = f(D)$$

Moch, Vermaseren, Vogt:

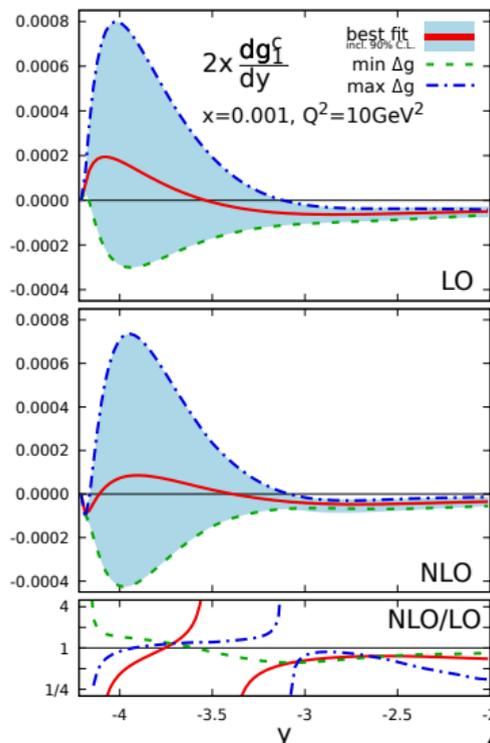

$$\text{tr} [\gamma_{\nu_1} \cdots \gamma_\mu \gamma_5] := \mathbf{g}, \varepsilon, \dots$$

Backup - Fully Inclusive Asymmetry

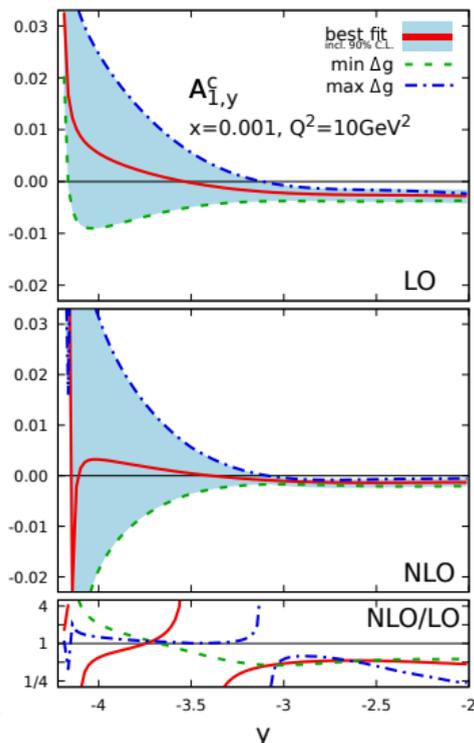

- $A_1^c(x, Q^2) = \frac{g_1^c(x, Q^2)}{F_1^c(x, Q^2)}$
- error bands are only due to DSSV uncertainties (no correlations!)
- sign unconstrained
- need measurement of $\mathcal{O}(10^{-3})$
- $\text{NLO} \approx \text{LO}$

Backup - Distributions - Rapidity

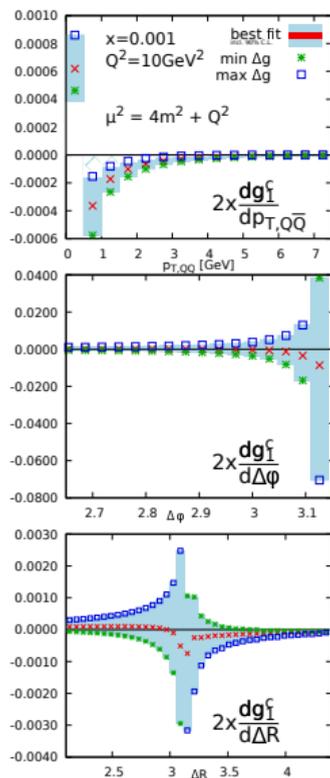

→

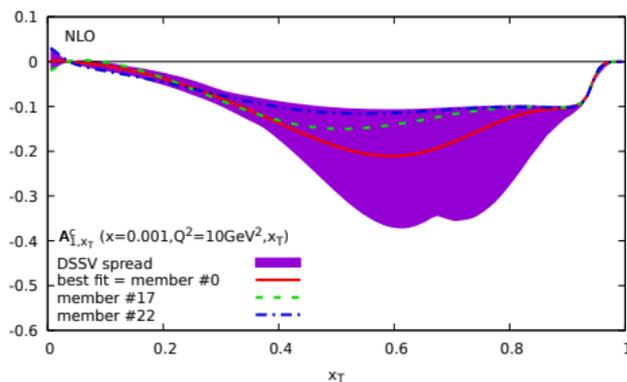

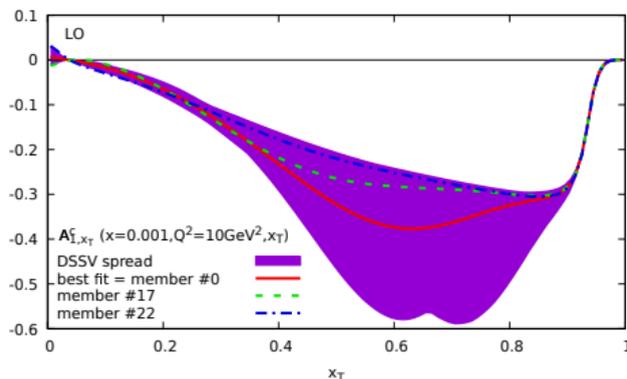

$$A_{1,y}^c = \frac{dg_1^c/dy}{dF_1^c/dy}$$

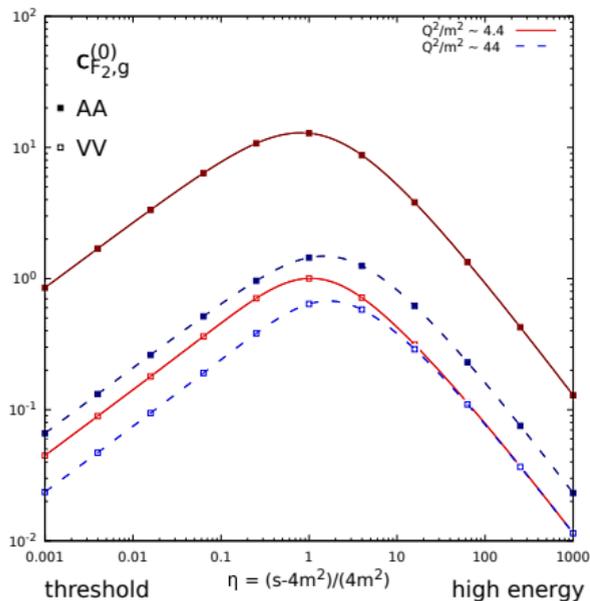

Backup - Distributions - Transverse Momentum Fraction

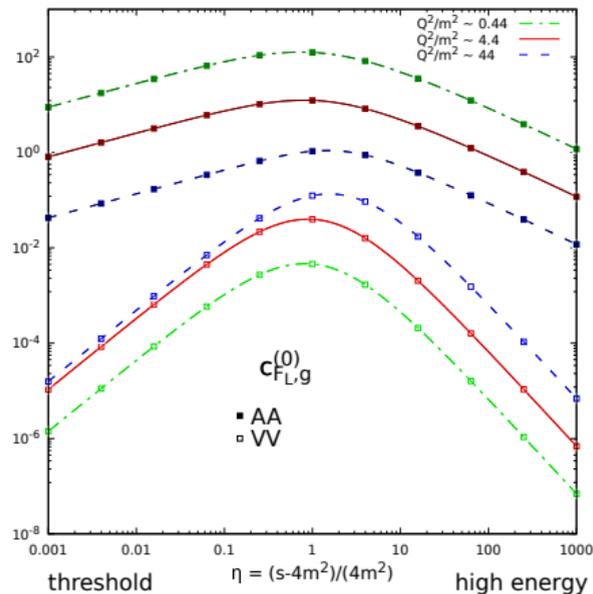

Backup - NC Partonic Gluon Channel

$$F_2^{\text{NC}} \sim \left(\frac{Q^2}{M_Z^2 + Q^2} \right)^2 F_2^Z$$

$$F_L = F_2 - 2xF_1$$

$$\lim_{Q^2 \rightarrow 0} C_{F_2,AA,g}^{(0)} \sim \frac{m^2}{Q^2}$$

$$\lim_{Q^2 \rightarrow 0} C_{F_L,AA,g}^{(0)} \sim \frac{m^2}{Q^2}, \text{ but } \lim_{Q^2 \rightarrow 0} C_{F_L,VV,g}^{(0)} \sim \frac{Q^2}{m^2}$$
