## The CERN Cloud Infrastructure: 5 years in 15 minutes

*Wednesday 1 May 2019 12:45 (20 minutes)*

In 2012, at CERN we started the deployment of our private Cloud Infrastructure using OpenStack. Since then we have moved from a few hundred cores to a multi-cell deployment spread between two data centres. After 6 years deploying and managing OpenStack at scale, we now look back and discuss the challenges of building a massive scale infrastructure from 0 to +300K cores. With this talk we will navigate through the history, architecture, tools and technical decisions behind the CERN Cloud Infrastructure.

**Author:** ABAD, Daniel (CERN)

**Presenter:** ABAD, Daniel (CERN)

**Session Classification:** Byte-sized talks from CERN engineers - Main Auditorium
