

Powering Tests & Magnet Training

This presentation seeks to address a number of topics and answer various questions posed by the program committee. Specifically the topics discussed in this presentation are:

- Concise overview of the hardware recommissioning campaign of December 2018 (HWC Dec 2018).
- Evolution of the efficiency of powering tests during run 2
- Requalification of circuits after interventions
- A general discussion on magnet training
- The magnet training campaign of December 2018 and its implications for possible future operation at 7 TeV
- Expected reliability for operating at energies beyond 6.5 TeV
