

Machine Configuration (20' + 10')

Thursday, 31 January 2019 16:00 (30 minutes)

- Run 2 machine configuration (focus on beta*, crossing angle and collimation settings)
- Aperture measurements, influence on beta start, levelling options and collimation settings
- Evolution of the collimation configuration during Run2 and justification
- Impact on performance
- Lessons learned

Presenter: BRUCE, Roderik (CERN)

Session Classification: Session 4: Beam performance during run 2
