## The Machine Learning Landscape of Top Taggers(15'+5')

*Tuesday, July 23, 2019 3:30 PM (20 minutes)*

Based on the established task of identifying boosted, hadronically decaying top quarks, we compare a wide range of modern machine learning approaches. We find that they are extremely powerful and great fun.

**Primary authors:** KASIECZKA, Gregor (Hamburg University (DE)); PLEHN, Tilman; BUTTER, Anja; CRANMER, Kyle Stuart (New York University (US)); DEBNATH, Dipsikha (University of Florida); FAIRBAIRN, Malcolm (Physics, King's College London); FEDORKO, Wojtek (University of British Columbia); GAY, Colin Warren (University of British Columbia (CA)); GOUSKOS, Loukas (CERN); KOMISKE, Patrick (Massachusetts Institute of Technology); LEISS, Simon; LISTER, Alison (University of British Columbia (CA)); MACALUSO, Sebastian (New York University); METODIEV, Eric (Massachusetts Institute of Technology); MOORE, Liam Ronald (Universite Catholique de Louvain (UCL) (BE)); NACHMAN, Ben (Lawrence Berkeley National Lab. (US)); NORDSTROM, Karl (LPTHE Paris); PEARKES, Jannicke Andree (SLAC National Accelerator Laboratory (US)); QU, Huilin (Univ. of California Santa Barbara (US)); RATH, Yannik Alexander (RWTH Aachen University (DE)); RIEGER, Marcel (RWTH Aachen University (DE)); SHIH, David (Rutgers University); THOMPSON, Jennifer (ITP Heidelberg); VARMA, Sreedevi

**Presenter:** MACALUSO, Sebastian (New York University)

**Session Classification:** Session: Machine Learning
