ATLAS results on Higgs boson couplings

Saturday, August 24, 2019 9:30 AM (30 minutes)

After the discovery of the Higgs boson in summer 2012, the understanding of its properties has been a high priority of the ATLAS physics program. The couplings of the Higgs boson to other SM particles as well as to itself are measured or constrained in a variety of single and double Higgs boson production processes and decay channels. A selection of these analysis is presented in this talk, as well as the most recent combination results of both single and double Higgs boson measurements.

Primary authors: TANAKA, Reisaburo (Centre National de la Recherche Scientifique (FR)); ON BEHALF OF THE ATLAS COLLABORATION

Presenter: TANAKA, Reisaburo (Centre National de la Recherche Scientifique (FR))

Session Classification: Workshop on Higgs Physics
