

CERN: A GATEWAY TO SCIENCE, TECHNOLOGY AND INNOVATION

Giovanni Anelli, Fabiola Gianotti, Manfred
Krammer, Archana Sharma, Emmanuel
Tsesmelis and Charlotte Lindberg Warakaulle

June 20th 2017

South Asian High Energy Physics
Instrumentation Workshop on Detector
Technology and Applications
Kathmandu University

*CERN
CH1211
Geneva, Switzerland*

CERN

- International leadership in particle physics research
- Leading Edge Engineering & Technological partnerships with Industry, Knowledge Transfer
- Highly Skilled in Specialized Competencies
- World Wide Collaboration Network Management
- Well established Education & Outreach

What is the world made of?
What holds the world together?
Where did we come from?

Time Machine

History of the Universe

Primary physics targets

- Origin of mass .. Nature of Dark Matter .. Understanding space time
- Matter versus antimatter .. Primordial plasma .. Higgs Boson .. SUSY₄.. CP Violation

CMS Experiment at the LHC, CERN
Data recorded: 2012-May-13 20:08:14.621490 GMT
Run/Event: 194108 / 564224000

C. Rubbia

E.G. Segrè

Nobel Prize 1988

S. van der Meer
Nobel Prize 1994

L.M. Lederman M. Schwartz J. Steinberger

O. Chamberlain
Nobel Prize 1959

- 1927: cloud chamber (C.T.R. Wilson)
- 1948: advanced cloud chamber (P.M.S. Blackett)
- 1950: nuclear emulsion (C.F. Powell)
- 1954: coincidence method (W. Bothe)
- 1958: Cherenkov effect (P.A. Cherenkov)
- 1960: bubble chamber (D.A. Glaser)
- 1992: multiwire proportional chamber (G. Charpak)
- 2009: CCD sensor (W.S. Boyle, G.E. Smith)

The legacy of nobel prizes in HEP instrumentation and experimentation continues

ATLAS and CMS

–INSTRUMENTATION at the Leading Edge

Each detector is like a 100 megapixel camera which takes 40 million pictures per second. The largest and most complex scientific instruments ever built.

Let's look inside the Giant CMS Detector

The Layers of CMS: Tracker

Finely segmented silicon sensors (strips and pixels) enable charged particles to be tracked and their momenta to be measured. They also reveal the positions at which long-lived unstable particles decay.

The Layers of CMS: ECAL

Nearly 80 000 crystals of lead tungstate (PbWO_4) are used to measure precisely the energies of electrons and photons. A 'preshower' detector, based on silicon sensors, helps particle identification in the endcaps.

The Layers of CMS: HCAL

Layers of dense material (brass or steel) interleaved with plastic scintillators or quartz fibres allow the determination of the energy of hadrons, that is, particles such as protons, neutrons, pions and kaons.

Underground Experiment Cavern (2003-4)

Spectacular Operations – “The Launch”

CMS Underground and

in “open” configuration

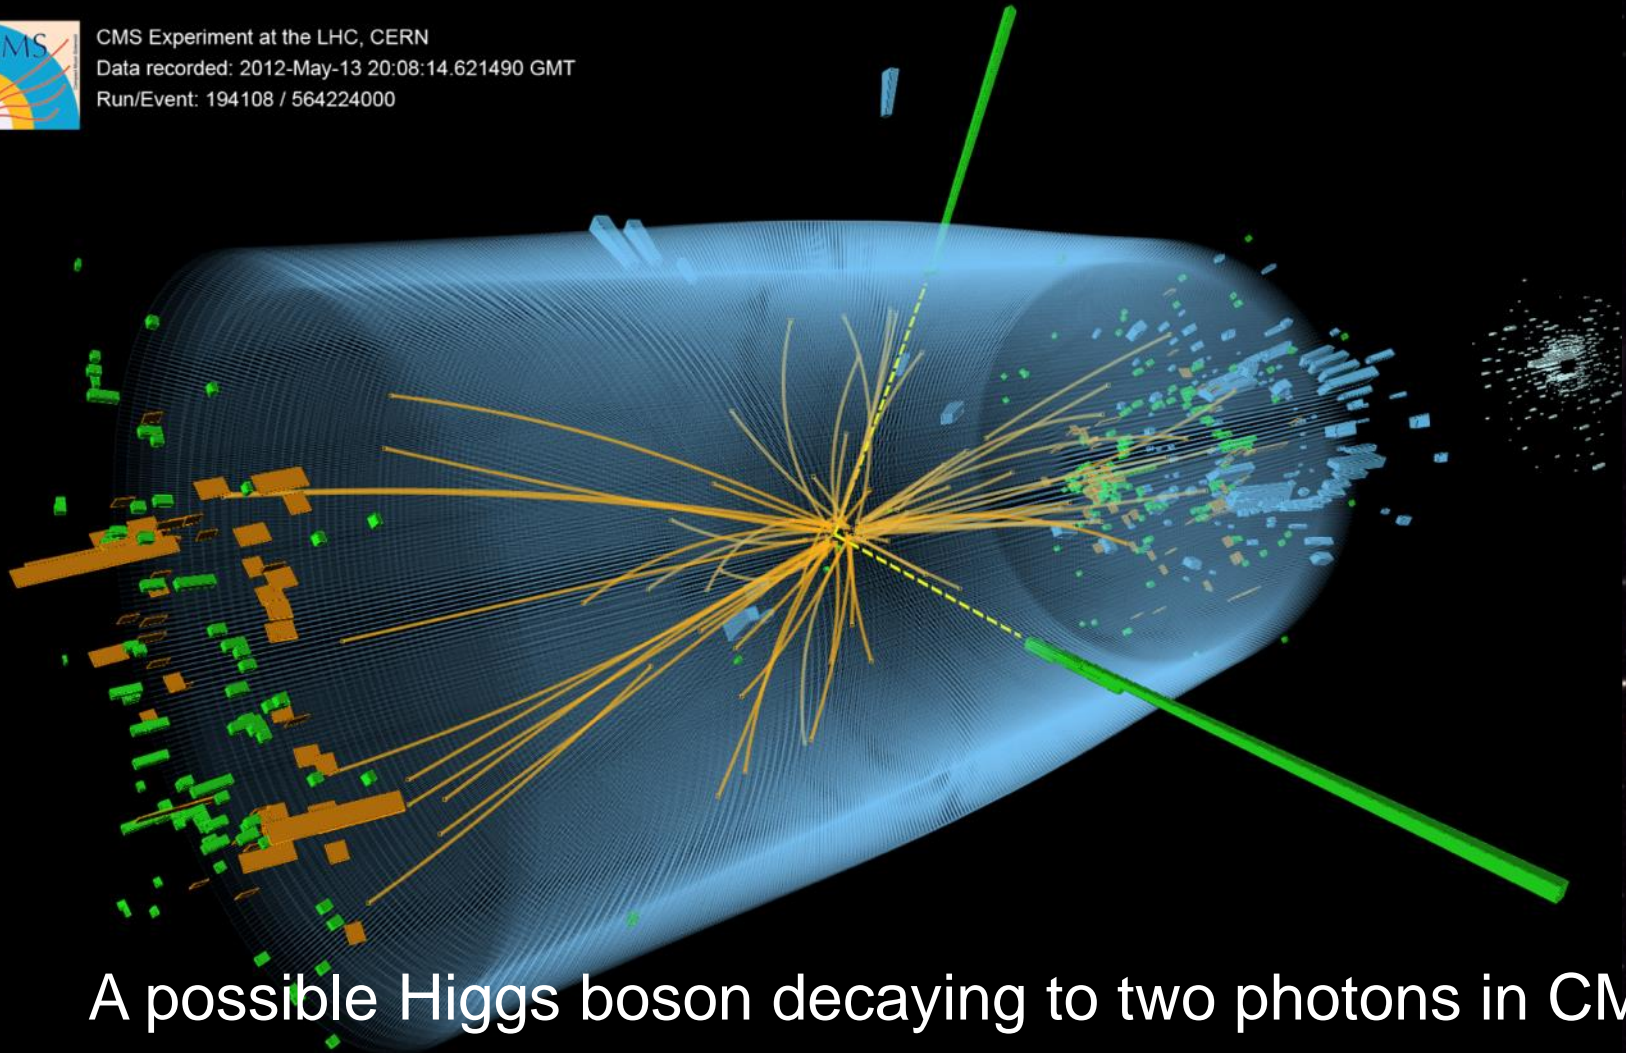

CMS Underground and “closed”

CMS takes “snapshots” of the collisions made by the LHC

HOW TO GET TO PUBLICATIONS ...

FROM PHYSICS TO RAW DATA – SIMULATIONS

Basic physics

**Fragmentation,
Decay**

**Interaction with
detector material**
Multiple scattering,
interactions

**Detector
response**
Noise, pile-up,
cross-talk,
inefficiency,
ambiguity,
resolution,
response
function,
alignment

```
2037 2446 1733 1699
4003 3611 952 1328
2132 1870 2093 3271
4732 1102 2491 3216
2421 1211 2319 2133
3451 1942 1121 3429
3742 1288 2343 7142
```

Raw data
Read-out
addresses,
ADC, TDC
values,
Bit patterns

- Really recorded raw data for ATLAS/CMS ~400 MB/s
- mainly electronics numbers
 - e.g. number of detector element where ADC (Analog-to-Digital converter) saw signal with x counts...

FROM PHYSICS TO RAW DATA – SIMULATIONS & ANALYSIS !

```

How to make therapy less harmful to patients ?

PRESS RELEASE

STOCKHOLM, SEPTEMBER 10, 2015

RAYSEARCH, CERN AND INFN SIGN LICENSE AGREEMENT IN THE FIELD OF ION BEAM THERAPY

CERN, INFN and RaySearch Laboratories AB (publ) have signed a long-term license agreement allowing RaySearch to utilize the FLUKA Monte Carlo code in its research and development in the field of ion beam therapy.

Bio Informatics

Education, Training

WEATHER GRID SYSTEM

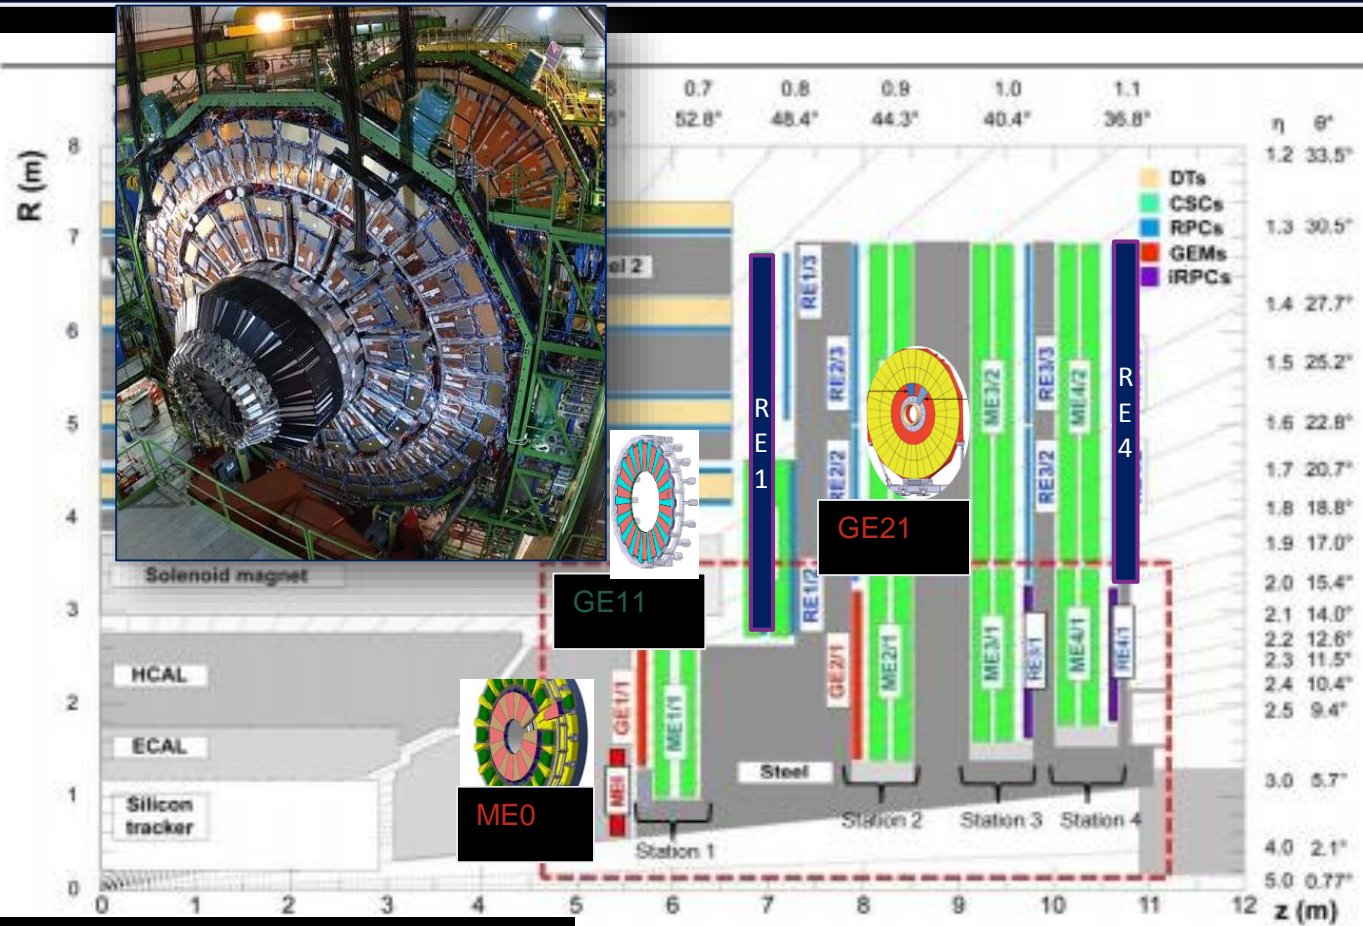

Distributed computing allows remotely located PCs work on small sections of huge amounts of data. Money and human lives can and are being saved using accurate weather forecasting.

HOW TO START ?

EXAMPLE: Forward Muon Upgrade : GEM to be installed in 2020

Project Manager – A. Sharma

EXAMPLE CMS GEM UPGRADE

- CERN technology 
- Licensed to India & Pakistan
- Collaboration conceived in 2009 with
~ 10 Institutions
- 2016 ~ 40 Institutions 200 Collaborators

~ 50 % Non Member States

- Some Lack of local expertise 
- Overcome by “conduit”
 - Holding specialized schools on detector, electronics, DAQ, s/w, f/w
 - Sharing Competence, training
 - 20 Workshops Organised over 6 years

- Co-supervision of PhDs 
- Production sites in Korea, India, Pakistan

Member State Countries Participating

Italy
Germany
Finland
Belgium
Hungary
Bulgaria

NMS / AM Countries Participating / Interested

Korea
India
Pakistan
China
Egypt
Colombia
USA

Malaysia
Thailand
Iran
Qatar
Kuwait
Lithuania

Student Interns & Teachers Over 500 students from all over the world

CASE FOR CERN-SOUTH ASIA CONSORTIUM FOR R&D IN DETECTORS, TECHNOLOGY AND APPLICATIONS (1)

PROPOSAL

**Participate in Designing and Building of an
experimental detector system for Physics
Goals... to answer questions about the Universe**

- Doctoral Students, Post Doc's, Teachers, Faculty & students
Installation, Commissioning, Operations and maintenance
Coordinated by CERN with organised partnership

CASE FOR CERN-SOUTH ASIA CONSORTIUM FOR R&D IN DETECTORS, TECHNOLOGY AND APPLICATIONS (2)

- Engage with on-going program which is just starting
- Physics harvest from Test Beam Studies and Simulations
- Teacher & student trainings
- R&D on Technologies
- Knowledge Exchange (KT) Opportunities
- Excellent opportunity of outreach and education

Search for Hidden Particles

An Example !

- SHiP looks for "Hidden Sector (HS)", which very weakly interacts with the SM-sector.
- HS models can accommodate ν -mixing, Dark Matter and could explain Baryon Asymmetry in the Universe.
- Typically HS production branching ratios of $O(10^{-10})$ and long lived $c\tau O(\text{km})$

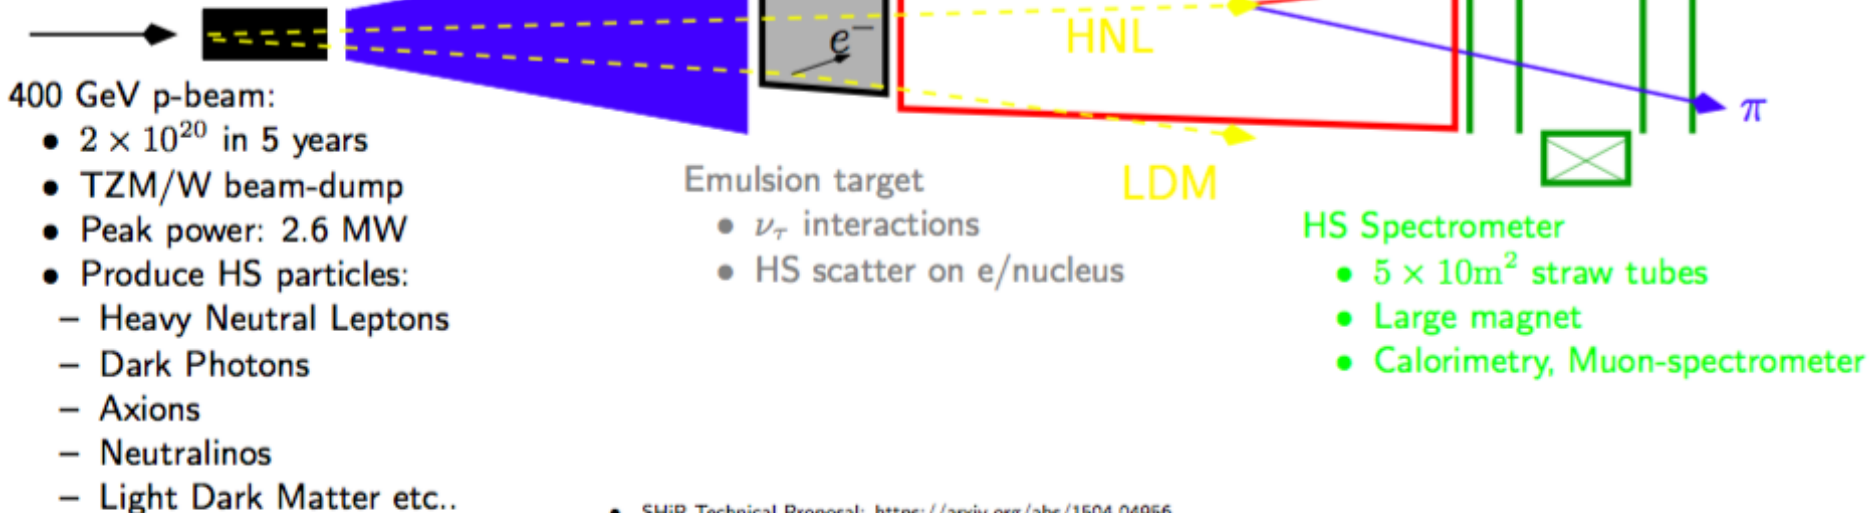

Principle of SHiP strategy to produce/detect HS particles:

Magnetic μ -shield ($10^{11} \mu/s$):

- ~ 30 m long, 1500 ton Fe
- Warm 1.8 T magnets

Vacuum decay-vessel

- "nothing" in, but HS-decay products out.
- Vacuum: otherwise $10^5 \nu$ -interactions.

- SHiP Technical Proposal: <https://arxiv.org/abs/1504.04956>
- SHiP Physics Paper: <https://arxiv.org/abs/1504.04855>, Reports on Progress in Physics, Volume 79, Number 12

Some SHiP Detector Technologies

SHiP collaboration: <http://ship.web.cern.ch/ship/>

Beam Delivery:

- Extraction and beam delivery from SPS, low loss Septum-magnet, Target Region

Magnets:

- Magnetic μ -shield (30 m long, 1500 tons)
- Large aperture spectrometer magnet: $5 \times 10 \text{ m}^2$, 0.15 T peak-field.

Tracking:

- Interleave emulsion with "time-stamping" detectors: GEM, or Scintillating fibres: $20\text{-}30 \text{ m}^2$
- RPCs for muon-spectrometers several 100 m^2
- Straw tubes in vacuum.

Calorimetry:

- Pointing ECAL
- Hadronic Calorimeter, merged with muon-spectrometer?

SHiP timeline:

2018: Comprehensive Design Reports for european Startegy Meeting

2020: SHiP is approved

2026: SHiP commissioning and first physics data taking.

OUTLOOK: CERN KNOWLEDGE EXCHANGE

- CERN-South Asia Consortium
- Develop project proposal plan as white paper (Panel Discussion Tomorrow)
- Encourage high levels of engagement between academia, universities and R&D Institutions
- Translation and application of research into innovation and KT – build pathways
- Train students and teachers in this whole process which underpins all the above
- We take data ! Discover ! Something ! Win prizes !

The background is a dark blue gradient with a subtle pattern of white stars. Overlaid on this are several faint, light blue technical diagrams. These include circular gauges with numerical scales (0, 90, 100, 110, 120, 130, 140, 150, 160, 170, 180, 190, 200, 210) and arrows, as well as concentric circles and dashed lines, suggesting a technical or scientific theme.

Thank you for your attention !!

*The woods are lovely, dark, and deep, But I have promises to keep,
And miles to go before I sleep, And miles to go before I sleep.*

Robert Frost
