Rootless containers with Podman and fuse-overlayfs

Tuesday, June 4, 2019 5:00 PM (45 minutes)

During my talk, I will show how it is possible to run OCI containers with Podman without requiring root privileges on the host.

In the second part of the talk, I'll focus on how we use fuse-overlayfs to replace the kernel overlay file system implementation, and the fuse-overlayfs built-in shifts-like capabilities.

About the Speaker

Giuseppe is a Principal Software Engineer at Red Hat. He is part of the Container Runtime Team, where he mainly works on Podman, Buildah, CRI-O.

Presenter: SCRIVANO, Giuseppe (Red Hat)

Session Classification: Technology Outlook
