CMS status and its future

Monday 28 January 2019 09:30 (40 minutes)

CMS has just finished an exceptional year of data taking, and began a two-year long shutdown for the upgrade of the detector and of the LHC accelerator. The talk will present a short status summary, and the outlook of the present upgrade that will bring us to “Run 3” and of the much more challenging upgrade for the High-Luminosity LHC phase that will follow.

Presenter: CARLIN, Roberto (Universita e INFN, Padova (IT))
