Open Bibliographic Data

Thursday 10 June 2010 16:30 (30 minutes)

End of January CERN Library published all bibliographic book data under Public Domain Dedication License and CC0 [1]. The presentation should highlight the reasons for this step and the chosen license. Already this step even if the data was published in MARCXML, an not very broad used format in the web, created some interest in the semantic web community. The second part of the presentation should show was happened since than and how this step helps to go the road to linked open data.
