

Shedding new light on Gamma-Ray Bursts with polarization data

Contribution ID: 29

Type: **not specified**

How do we make polarization analysis open?

Thursday, 29 November 2018 16:15 (1 hour)

With the increase in available polarization data it becomes possible to make this data public and allow any interested party to perform analysis on it. This requires simple, transparent thoroughly tested public tools as well as data in easy to use formats.

We aim to discuss here what people from the theory and analysis community would like to do with public polarization data and how we can best provide such tools.

Presenter: KOLE, Merlin Reynaard (Universite de Geneve (CH))

Session Classification: Novel Analysis methods
