

PARTNERSHIP FOR ADVANCED COMPUTING IN EUROPE

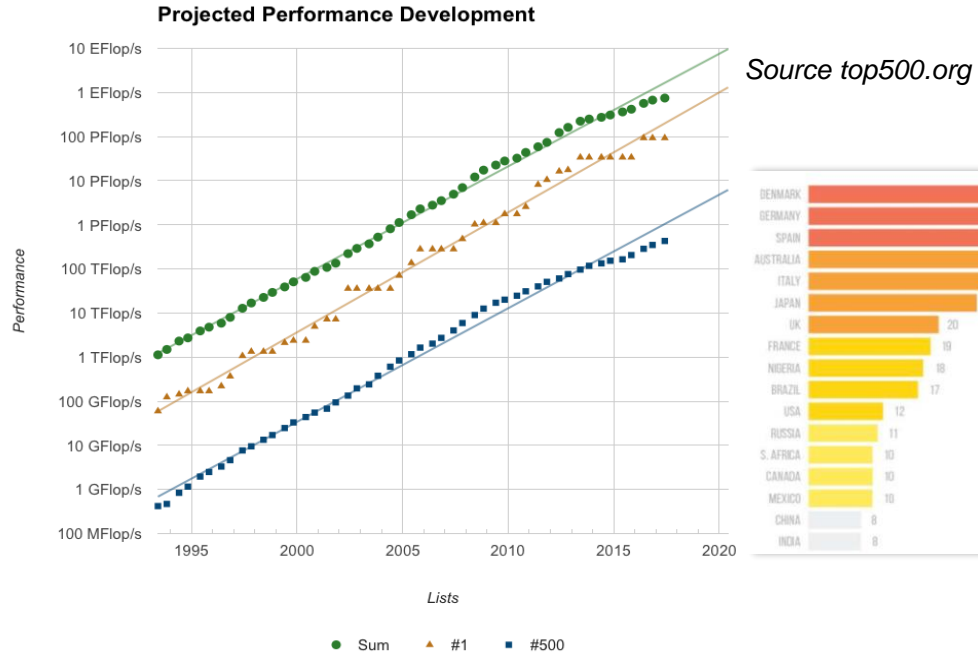

Overview of PRACE HLST services

Stéphane Requena

Member of the Board of Directors | PRACE aisbl

The context: the road to Exascale

- ▶ Expected in
 - ▶ 2019/20 for China
 - ▶ 2021/22 for US and Japan
 - ▶ 2022/2023 in Europe (EuroHPC)
- ▶ BUT: No more focus on peak performance
- ▶ Systems 50 to 100x faster than 2017 ones on **real apps**

Strong constraints on energy : 20 to 30MW

- Free flops but moving data will cost
- Strong impact on HW/SW : dense architectures, deep memory hierarchies, more //, resiliency....

Strong impact on apps / programmability !
Support to users !

The context : Convergence between HPC, Big Data and AI

► Explosion of computational data

Cosmology
DEUS project
150 PB raw data

Reservoir modeling
of gigamodels 350 TB/run

HiFi turbulent
DNS combustion
S3D : 1PB / 30mn

Climate CMIP exercises

Status CMIP5 data archive:

- 1.8 PB for 59000 data sets stored in 4.3 Mio Files in 23 ESGF data nodes
- CMIP5 data is about 50 times CMIP3

Extrapolation to CMIP6:

- CMIP6 has a more complex experiment structure than CMIP5.
- Expectations: more models, finer spatial resolution and larger ensembles
- Factor of 20: 36 PB in 86 Mio Files
- Factor of 50: 90 PB in 215 Mio Files

► And instrumental data

LOFAR/SKA
4 EB/yr raw

COPERNICUS/SWOT
4 PB/d raw

LSST/EUCLID
20 PB/night raw

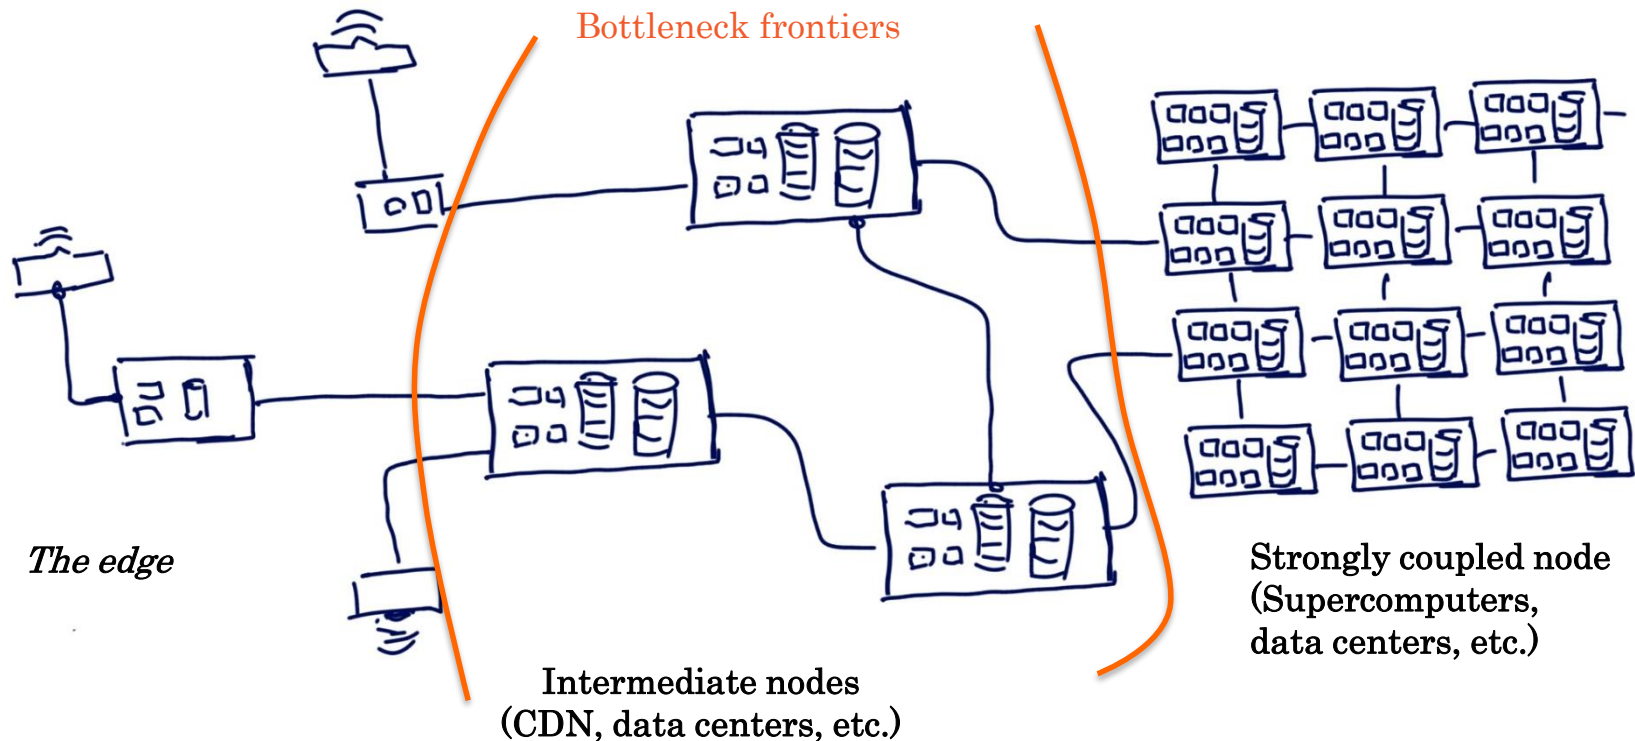

Network of
seismic sensors
100 TB/yr

Internet & IoT

The context : Convergence between HPC, Big Data and AI

Complex workflow and data logistic to map onto the set of systems

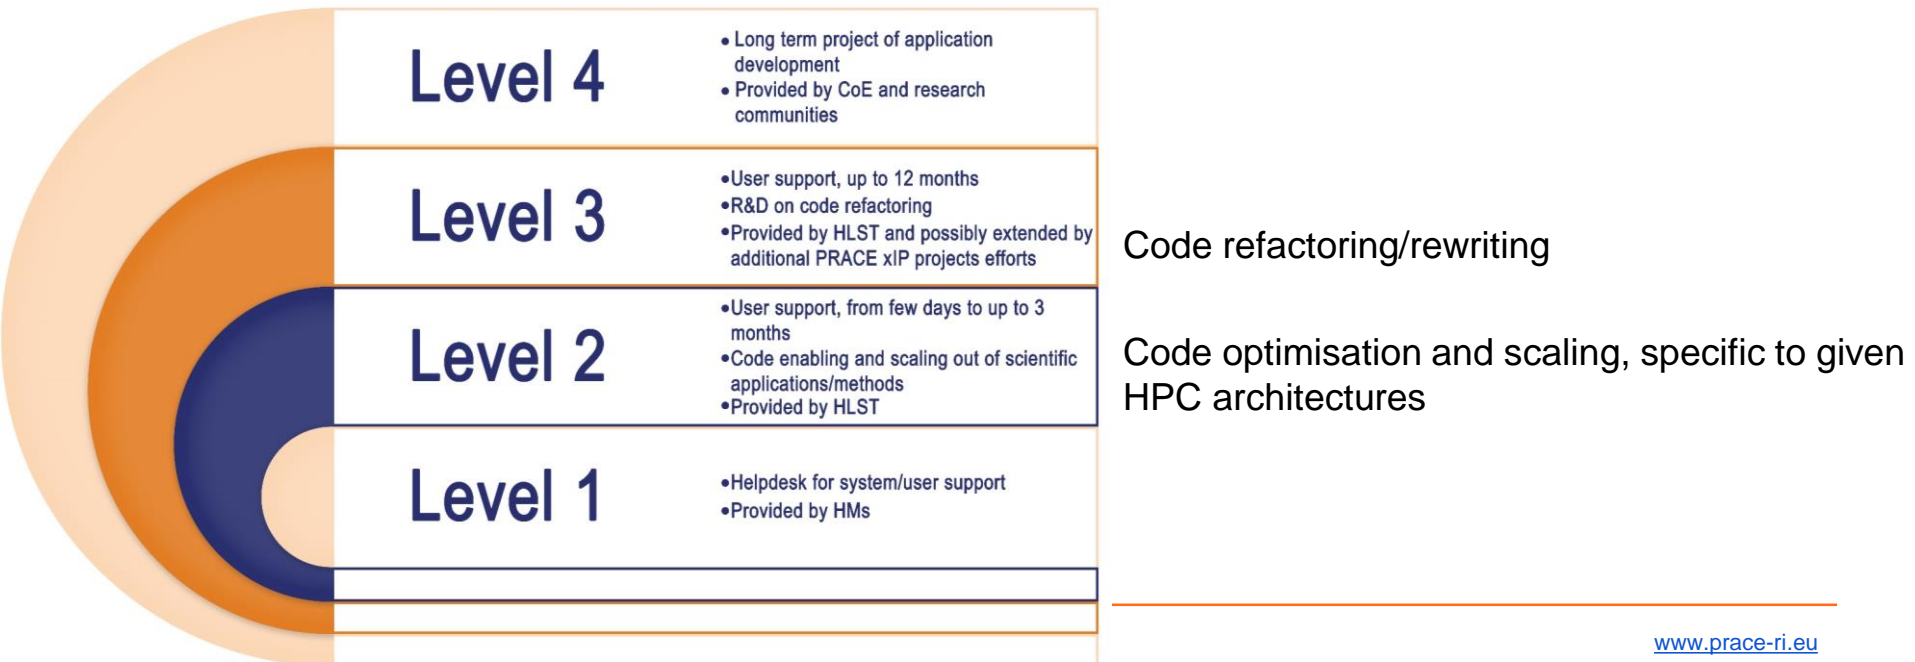

- ▶ Challenges: cohabitation of SW stacks, containers, security, smart resource managers, elastic/interactive access, end to end workflows, edge computing (at the source), ...
- ▶ Development of **new services, co design** and **user support**

Introducing PRACE HLST | High Level Support Teams

- PRACE2 firmied in 2016
 - Increased contribution of HPC cycles from 5 HM (DE, FR, IT, SP and CH)
 - Funding by the other PRACE partners of **5 HLST** located close to HM sites
 - *Representing 25 FTE people working for user support level 2 and 3 operations*

Level 4	• Long term project of application development • Provided by CoE and research communities
Level 3	• User support up to 12 months • R&D on code refactoring • Provided by HLST and possibly extended by additional PRACE 6IP projects efforts
Level 2	• User support from the days up to 3 months • Code debugging and building out of scientific applications/tech • Provided by HLST
Level 1	• Helpdesk for system/user support • Provided by sites

Introducing PRACE HLST | High Level Support Teams

- On going extension of the HLST level 3 with additional resources from PRACE partners
 - In the field of the PRACE-6IP projects and beyond
 - Specific and new activity (WP8) coordinated by CSCS
- Toward a **fully distributed European wide level 3 taskforce**
- Selection process of the proposals to be supported by HLST
 - For HLST level 2 : on the fly directly from the PRACE proposals running on Tier-0 centers (using either preparatory access or project access)
 - For HLST level 3 :
 - After each call for proposal and upon proposal of the PRACE Access Committee (*independent experts committee in charge of the scientific ranking of projects asking for PRACE resources each call*)
→ target = proposals technically rejected but with good scientific ranking
 - Specific call for proposal organised by PRACE-6IP WP8

PRACE | HLST as one of the core services

Towards End-Users	Access	Support	Towards PRACE Partners
