Test Beam Setup

300x300 mm² hybrid

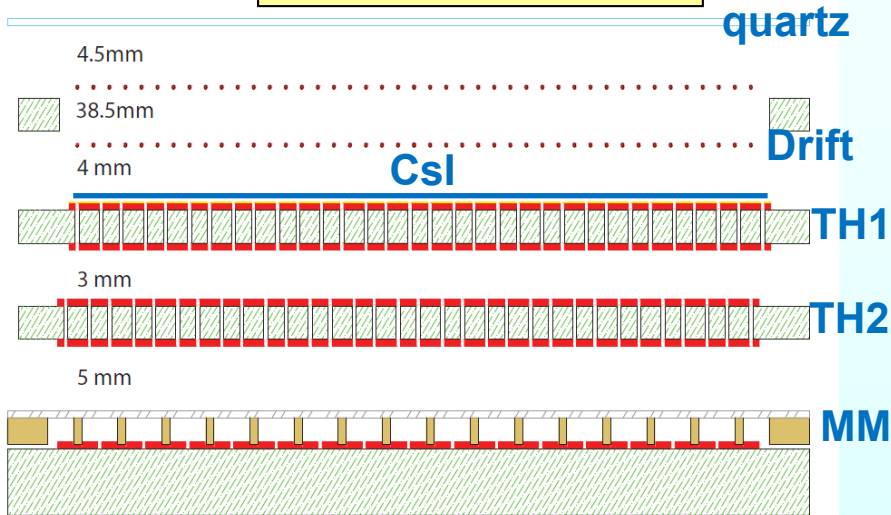

hybrid THGEM+Micromegas PD

Hybrid PD scheme

Active area = 300x300 mm² azionale di Fisica Nucleare

12 mm X 12 mm pads

THGEM parameters:
 Thickness = 0.4 mm
 Hole diameter = 0.4 mm
 Pitch = 0.4 mm
 No rim

Standard Bulk Micromegas produced at CERN

Capacitive coupling → APV25 → SRS

35 micron Cu
 6 sectors
 Drilling by ELTOS
 Polishing in Trieste
 Au coating at CERN

Timeline

Support structure and services installation: Oct. 16-17

Alignment and gas distribution: Oct. 18

Trigger preparation (parasitic): Oct. 19-22

Fused silica radiators mounting: Oct. 22

Photon Detectors installation: Oct. 23

Trigger setting: Oct. 24-25

Tuning and calibration with analog readout: Oct. 25-27

SRS problems (fixed by Eraldo) Oct. 28

Data taking with Ar/CH₄ 50/50 Oct. 28-30

Gas changed to pure CH₄: Oct. 30 → No beam until end of test beam period

Extra time in parasitic mode for data taking with pure CH₄:

CH₄ data with Minipad detector: Nov. 1 – 3

CH₄ data with 300 x 300: Nov. 4-5

Dismounting of the setup: Nov. 7

Data

Analogue readout scans:

- THGEM1, THGEM2 and MM Voltage bias, Drift scans

SRS readout data:

- latency scan
- drift scans (for different THGEM1 ΔV)
- Voltage bias scans (for THGEM1, THGEM2 and MM)
- Light interceptor scans
- Long runs in nominal conditions with interceptor open and closed

Data for both Ar/CH₄ 50/50 and pure CH₄.

Data for both Minipad and 300 x 300.

Most of the data are still to be analyzed.

APV Signals

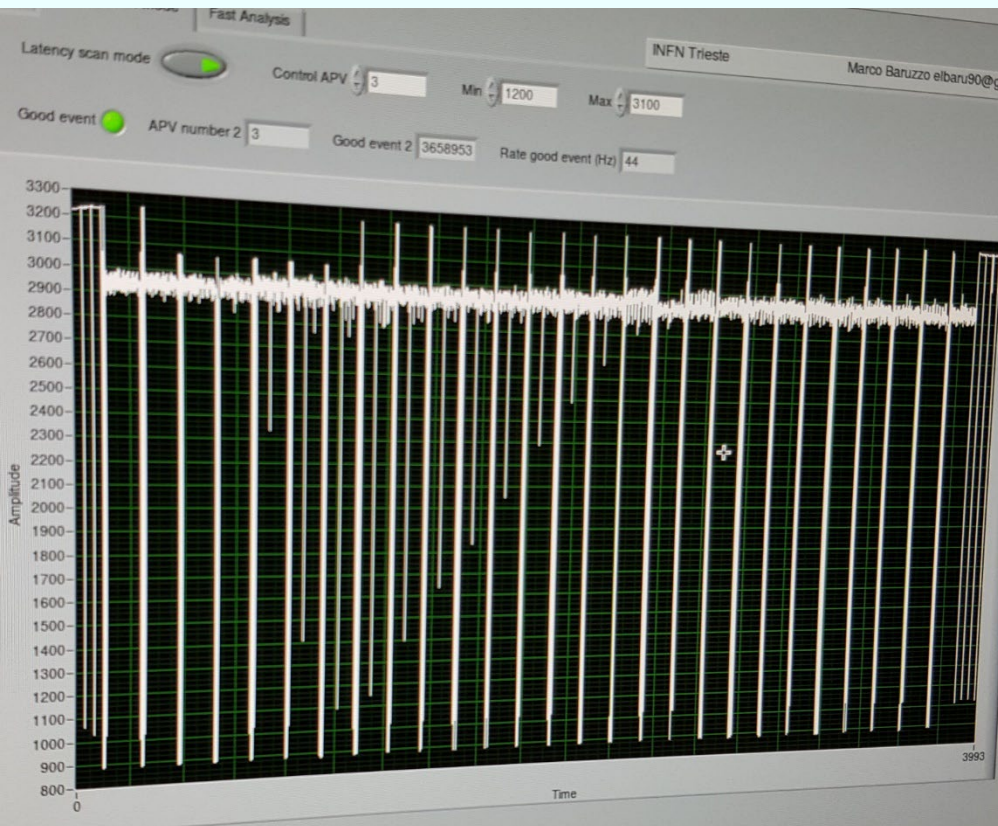

Istituto Nazionale di Fisica Nucleare

Typical gain: ~ 30 k

Typical acquisition rate: ~ 300 events/spill

Latency scan

Piled up rings

Conclusions

New modular Hybrid THGEM + MM PD with minipads (3 mm x 3 mm) tested with beam for the first time.

Stable response (~30k gain), almost no APV setting loss.

Photon rings (piled up events) clearly seen

Prototype “validated” at first order.

Comparison between Ar/CH₄ 50/50 and pure CH₄ in beam for the first time

Frequent APV setting loss for large gain with 300 x 300 Hybrid PD

Big thanks to Yorgos and Nikos
and enormous thanks to Eraldo
