Accelerators in Spain

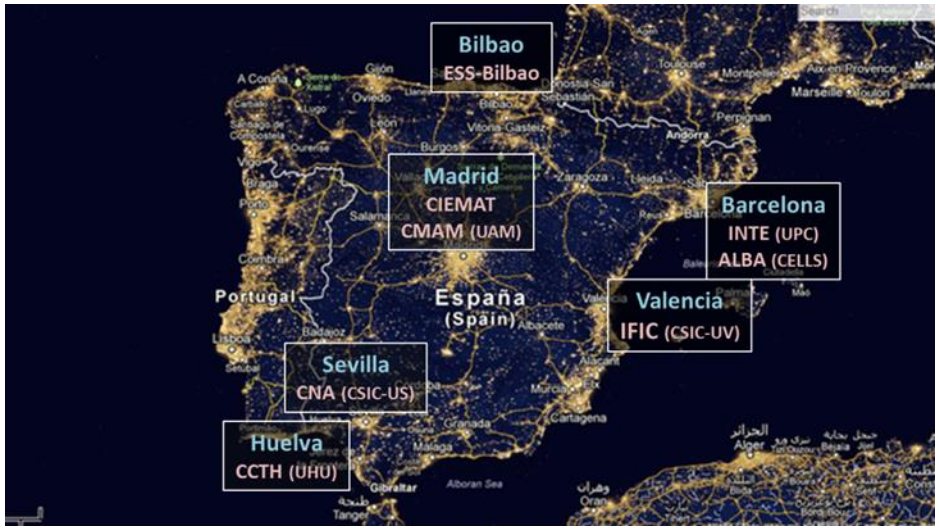
Francis Perez
ALBA Accelerator's Head

on behalf of

CONECTA: **Spanish Coordination on Accelerator's Science and Technology**

CONECTA

Spanish Accelerator Facilities and Groups



- ALBA - 3rd Generation Light Source - Barcelona
- CNA - Centro Nacional de Aceleradores – US - Sevilla
- CMAM - Centro de Microanálisis de Materiales – UAM - Madrid
- CIEMAT Accelerator Group - Madrid
- IFIC Accelerator Group - CSIC-UV - Valencia
- INTE - Institute of Energy Technologies – UPC - Barcelona
- ESS Bilbao - Bilbao
- CCTH - Centro Científico Tecnológico Huelva – UHU - Huelva

CONECTA

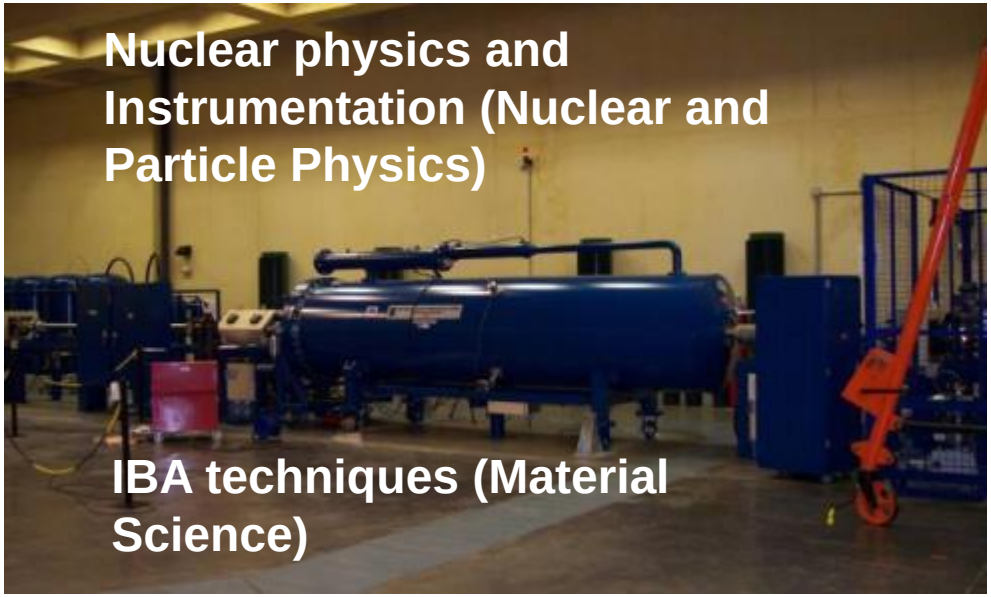
Coordination of the activities of the Accelerator community in Spain

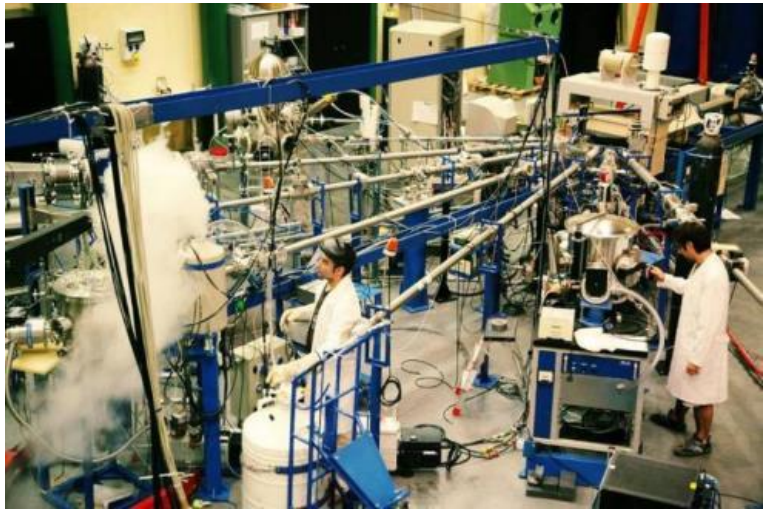
SCOPE

- Contribute to the **implementation of R&D Plans**
- Provide technical consultancy
- Provide support to **education and training**
- Help to coordinate the rationalization of the available resources
- Help to consolidate and recognize professional careers
- Serve as consultant to the industry, in coordination with official bodies
- Provide knowledge and support to the Spanish participation in **international collaborations**
- Gather the needs on accelerator technologies on different scientific fields

Parque Tecnológico Cartuja'93, Avda.Thomas Alva Edison nº 7, E-41092 – Sevilla. Spain
Phone: +34.95.4460553, Fax: +34.95.4460145 cna@us.es
Joaquin Gomez - CNA

3MV Tandem accelerator





Cyclotron
18 MeV (p), 9 MeV (d)

Irradiation (Space technology

Radiopharmaceutical production (Molecular Imaging)

CENTRO DE MICRO-ANÁLISIS DE MATERIALES

Belonging to UAM
Located in the Cantoblanco Campus
In operation since March 2003
11 M€ of technological investment

CMAM Research Fields
Archaeometry
Biophysics
Energy Related Materials
Ion-Solid Interactions
Nuclear Physics
Photonics

Open facility with competitive access

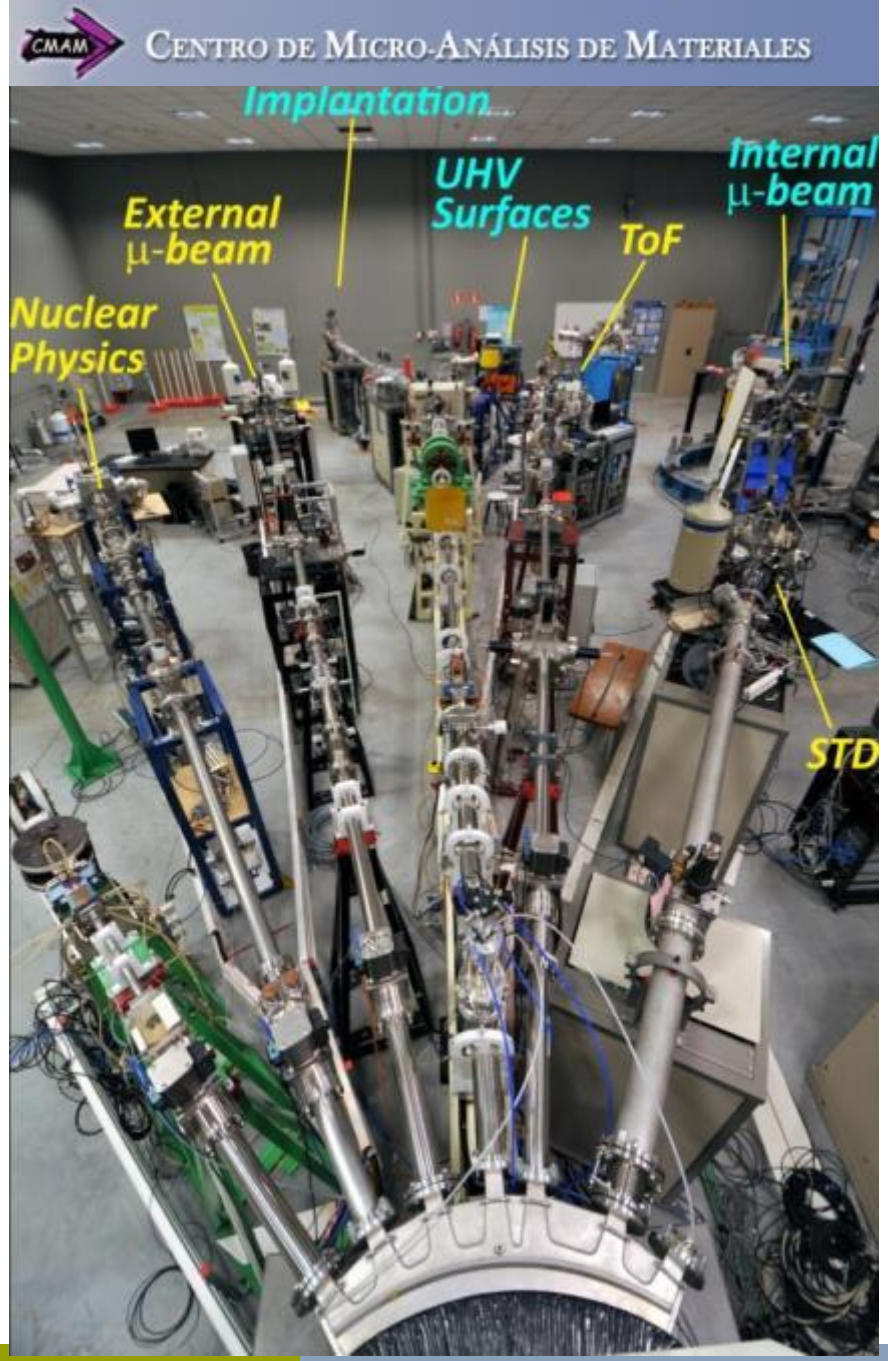
Beamtime periods and deadlines 2018:

Period 00	Period 02	Period 04	Period 06	Period 08	Period 10	Period 12
08 January - 16 February	19 February - 06 April	09 April - 18 May	21 May - 06 July	09 July - 21 September	24 September - 02 November	05 November - 21 December
deadline 5 Dic. 17	deadline 17 Jan. 18	deadline 7 Mar. 18	deadline 25 Apr. 18	deadline 30 May. 18	deadline 4 Jul. 18	deadline 26 Sep. 18

Accelerator & Beamlines

Tandem accelerator, 5MV, **HVEE.**
The first, High Current, Tandetron Accelerator using the Coaxial Cockcroft-Walton power supply system to reach 5MV.

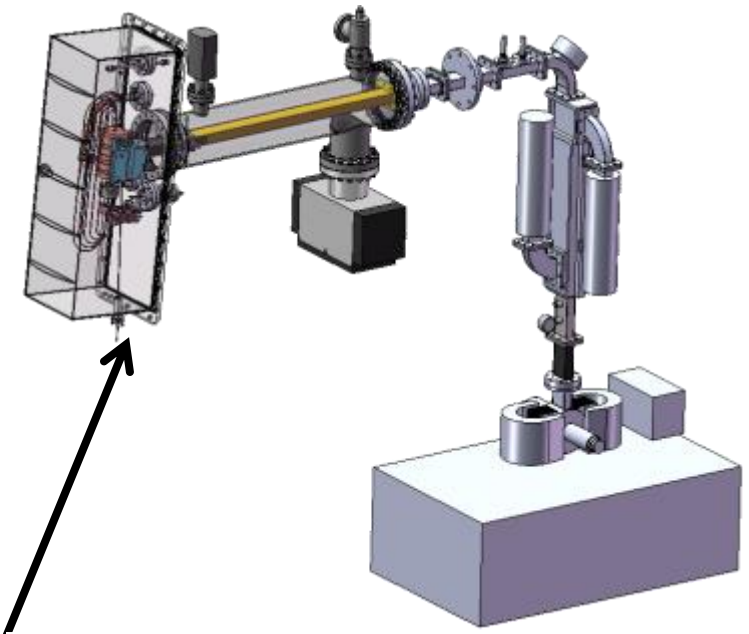
Experimental stations.
Four beamlines with seven experimental stations, including two micro-beams.)



Institut de Tècniques Energètiques inte
UNIVERSITAT POLITÈCNICA DE CATALUNYA

Microtron project at the INTE-UPC

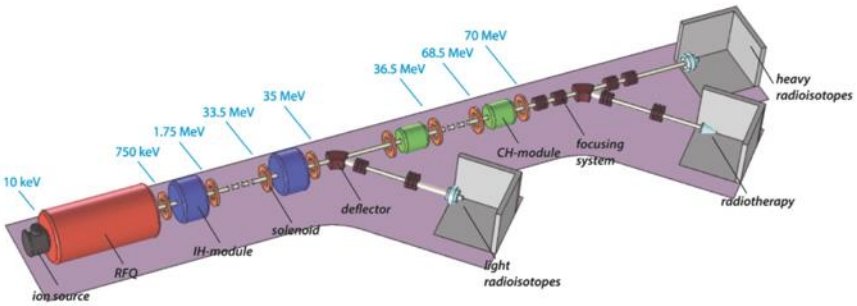
- Design and construction of an electron accelerator with beam recirculation of the **race-track microtron (RTM**) type.
- Quite **compact machine**: the accelerator head dimensions are 60 x 20 x 12 cm approximately.
- Experiments on **material irradiation** with electron beam, **industrial radiography**, **cargo inspection**



Main characteristics	
Beam energies	6, 8, 10, 12 MeV
Energy gain per turn	2 MeV
Injection energy	25 keV
Operating frequency	5712 MHz
Pulse duration	3 μs
Pulse repetition frequency	1 – 200 Hz
Pulse beam corrent	5 mA

3D image of the interior of the accelerator head / vacuum chamber

- **Permanent magnets (NdFeB) in-vacuum**
- **Energy switch by change of the extraction orbit**
- **On-axis E-gun with off-axis cathode**



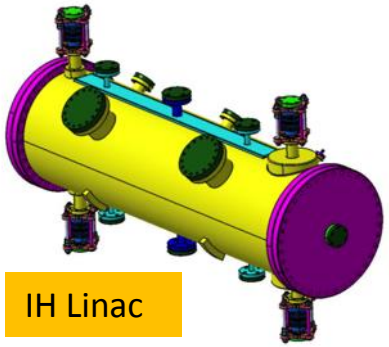
ICH15 – Facility layout

Proyecto ICH15 (CDTI, ITC-20151186)

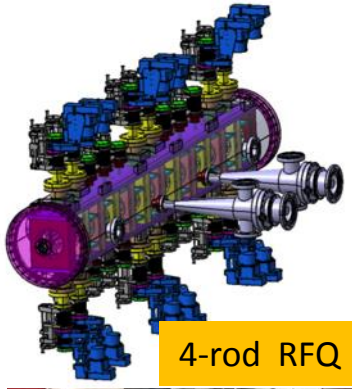
Design of a 70 MeV IH+CH CW **proton linac for radioisotope production and therapy** (uveal tumour). Freq.= 200 MHz.

I= 5 mA , E= 30 MeV & 70 MeV production beam lines

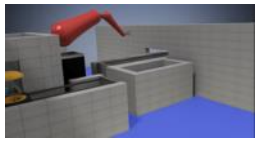
I = 1 uA, E= 70 MeV radiotherapy beam line

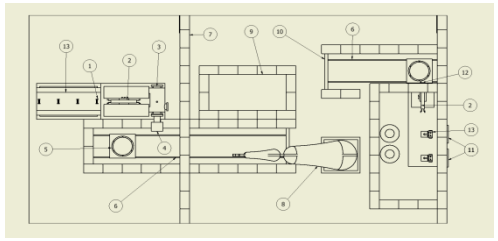


IH Linac

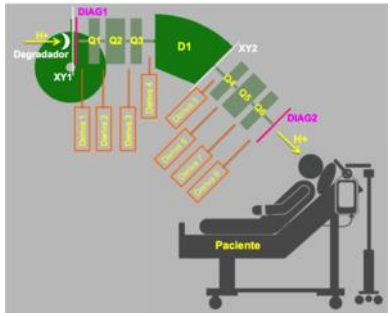


4-rod RFQ





30 & 70 MeV radioisotope production



70 MeV radiotherapy

RFQ & IH prototypes being tested at CCTH – Huelva

Accelerator R&D, IFIC

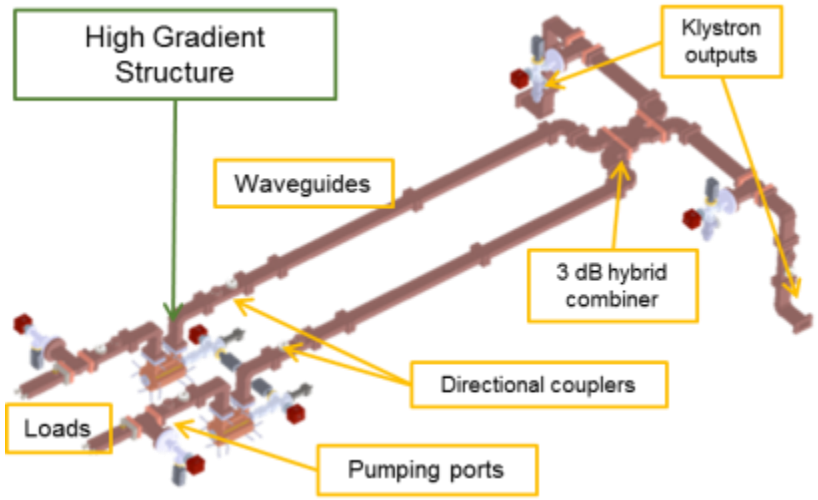
http://gap.ific.uv.es/

Daniel Esperante

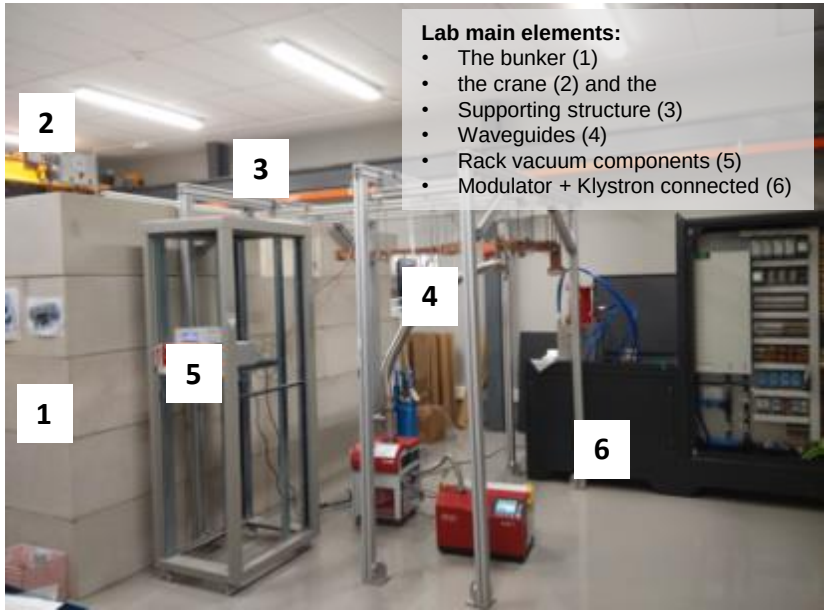
COLLABORATIONS

- **ERDF funds** to construct HG-RF laboratory and purchase equipment.
- **Marie Curie – IF (H2020) :** D. Esperante, grant to develop the system and upgrade it.
- **Marie Curie – ITN-OMA (H2020)** : A. Vnuchenko. Optimization of Medical Accelerators.
- **CompactLight-XLS INFRADEV (H2020):** Use of high-gradient for “Free Electron Laser” facilities
- **New CLIC-KE contract:** Val HG-RF lab power upgrade, commissioning, first operations and XBOXs support.

High-Gradient RF laboratory



High-power S-Band (3 GHz)



Aim: High-gradient research topics at 3 GHz => RF testing, breakdown studies and dependencies, structures RF conditioning, studies of High-Power performance, Surface field emission, development of alternative diagnostics and analysis techniquesDesign and development of RF components and technology

Prospects for Val HG-RF facility:

- R&D High-gradient accelerators for hadrontherapy applications:
  - Testing and conditioning of HG cavities and high-gradient phenomena studies
  - Design and development of HG cavities for hadrontherapy linacs
  - High-energy proton imaging in hadron-therapy
- Other applications: Very High Energy Electron (VHEE) linacs for radiotherapy, cargo-scanning, FELs, compton sources…

Accelerator R&D activities: CIEMAT

Luis García-Tabarés - CIEMAT

The Electrical Engineering Division at CIEMAT

STRUCTURE

ELECTRIC ENGINEERING DIVISION (33 people)

- ACCELERATOR TECHNOLOGY UNIT (16 people)
- ELECTROMECHANICAL TECHNOLOGY UNIT (9 people)
- POWER SYSTEMS UNIT (6 people)

FACILITIES

Main Offices

Energy & Superconductivity

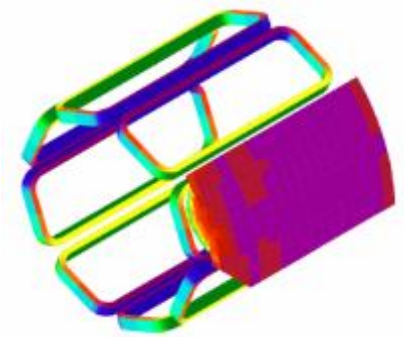
Assembly Hall

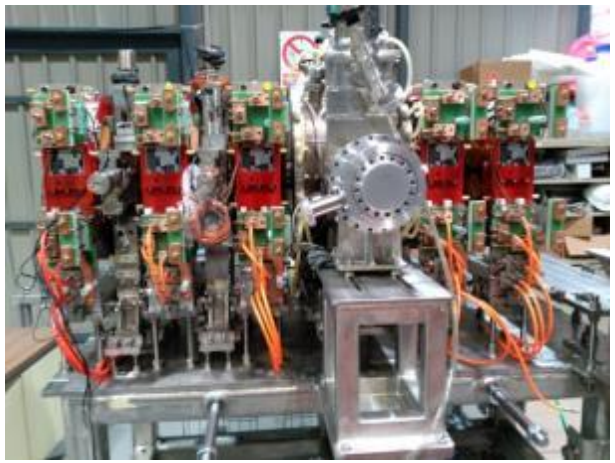
Electrical Engineering Division: Areas, Projects and Collaborations

ACCELERATORS	POWER SYSTEMS
Large Facilities ↓	**Storage ↓**
E-XFEL	SH2
FAIR	
LHC Hi-Lumi (CERN)	
CTF3/CLIC (CERN)	
FCC (CERN) & EuroCirCol	
ILC	
IFMIF	**Generation ↓**
TIARA	UNDIGEN+
Small Accelerators ↓	SEA-TITAN
AMIT CYCLOTRON	

Accelerator Technology Unit: Activities & Capabilities

- **Calculations**: Electromagnetic, thermal and mechanical analysis and beam dynamics simulations.
- **Engineering design:** 3-D modeling, fabrication techniques, drawings.
- **Prototyping**: Fabrication and assembly of magnets, RF structures and other accelerator components, including complete compact accelerators.
- **Testing**: Two vertical cryostats, one cryocooler and low power RF measurements.

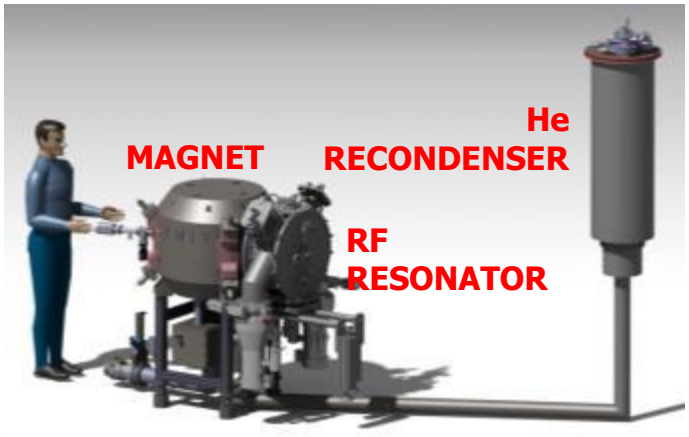




Accelerator R&D activities: CIEMAT

THE AMIT PROJECT:
A Compact Superconducting Cyclotron for Radioisotope Production

GENERAL	
Cyclotron Type	Classical
Energy	>8.5 MeV
Current	>10 μA
MAGNET	
Type	Low Tc Superconductor
Configuration	Warm Iron
Superconductor	NbTi
Central Field	4 T
Focusing type	Radially decreasing (1.5%@extraction radius)
RF SYSTEM	
Configuration	One 180º Dee
Peak Voltage	60 kV
RF frequency	~ 60 MHz
ION SOURCE	
Type	Internal
Ions	H^-
EXTRACTION	
Extraction	Stripping foil at 110 mm
Target	Nitrogen gas (^{11}C) , ^{18}O enriched water (^{18}F)
Position	External



General lay out of the accelerator (up) and complete superconducting magnet (down)

IFMIF - DONES

El objetivo del proyecto IFMIF (International Fusion Materials Irradiation Facility) es ahondar en el conocimiento del comportamiento de los materiales requeridos para la construcción de un futuro reactor de fusión.

ESS-Bilbao

The Spanish Contribution to the ESS

Public consortium of Central and Basque Governments; bringing knowledge and added value in particle accelerators and neutron scattering science and technologies; by leveraging its in-kind contribution to the European Spallation Neutron Source, in Lund (Sweden).

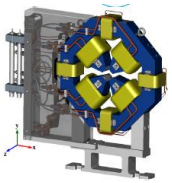
In-Kind Contributions to ESS

MEBT

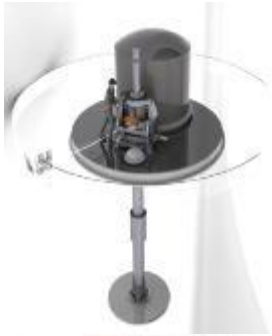


Accelerating element: complete subsystem that goes after the RFQ and integrates: design, manufacturing, diagnostics, control, assembly and testing.

RF Systems

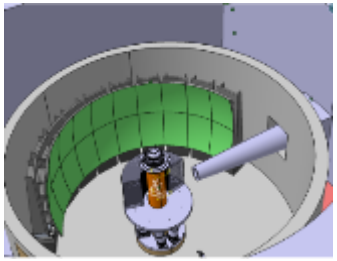
RF chains: 1 for RFQ and 5 for DTL. Composed by klystrons, modulators, loads, waveguides, interlocks and LLRF

TARGET



The spallation process takes place when the accelerated proton beam hits the Tungsten bricks of the 11-tonne target wheel. This will produce neutron brightness for scientific experiments across multiple disciplines.

MIRACLES INSTRUMENT

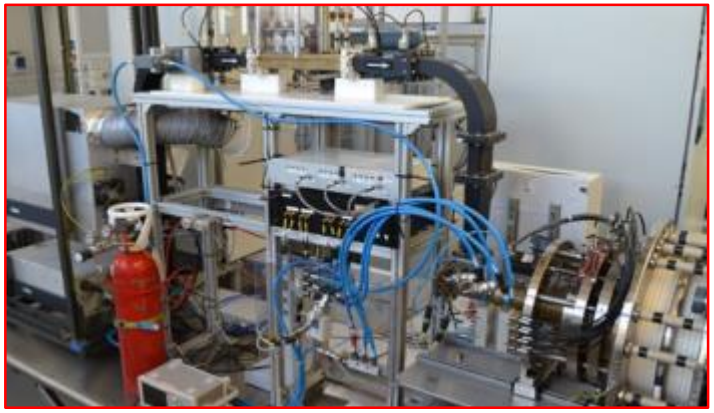


Time-of-Flight backscattering instrument for polymer science, energy materials, and magnetism studies.
Prime contractors: design, manufacturing, assembly &cold commissioning

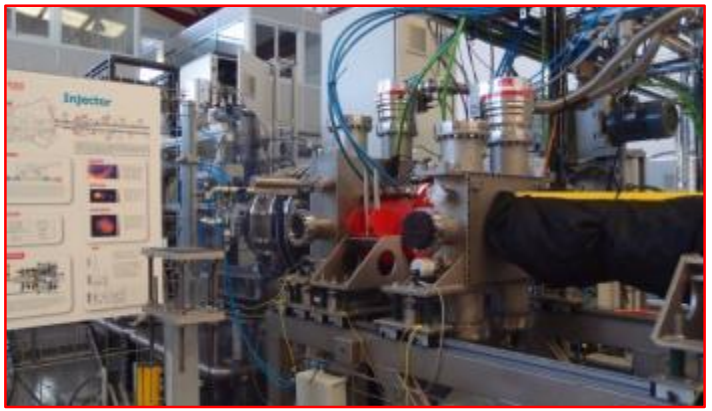
EUROPEAN SPALLATION SOURCE

EUSKO JAURLARITZA GOBIERNO VASCO

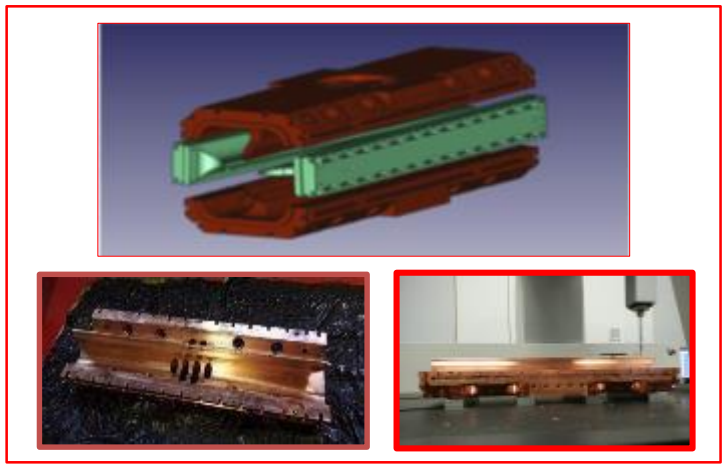
ESS-Bilbao In-House Projects



ECR: H+ source; 45 KeV; 50 mA



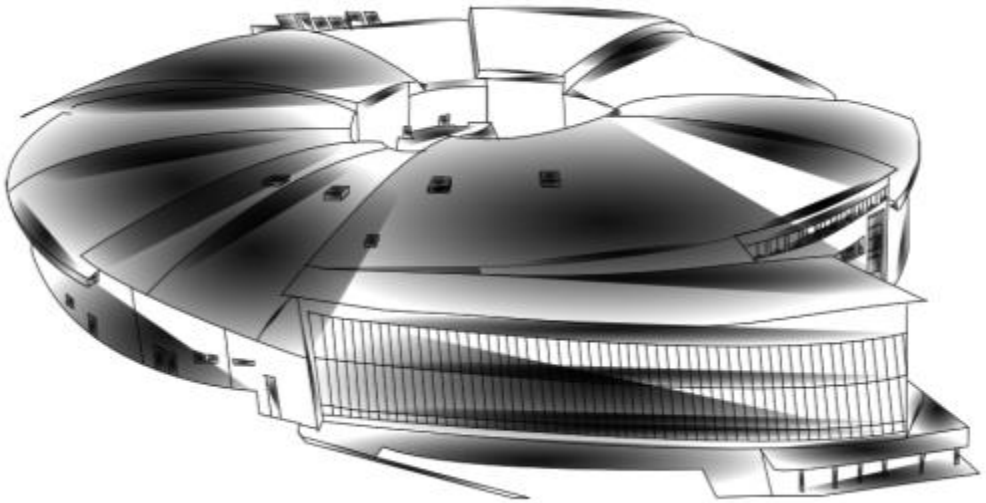
LEBT: Low Energy Beam Transport
Focusing and beam diagnostics



RFQ: Radio Frequency Quadrupole
Four-vane, 3 MeV, 3.2 m long, at 352 MHz

RFTX: RF Test Stand

ALBA,
Synchrotron Light Source

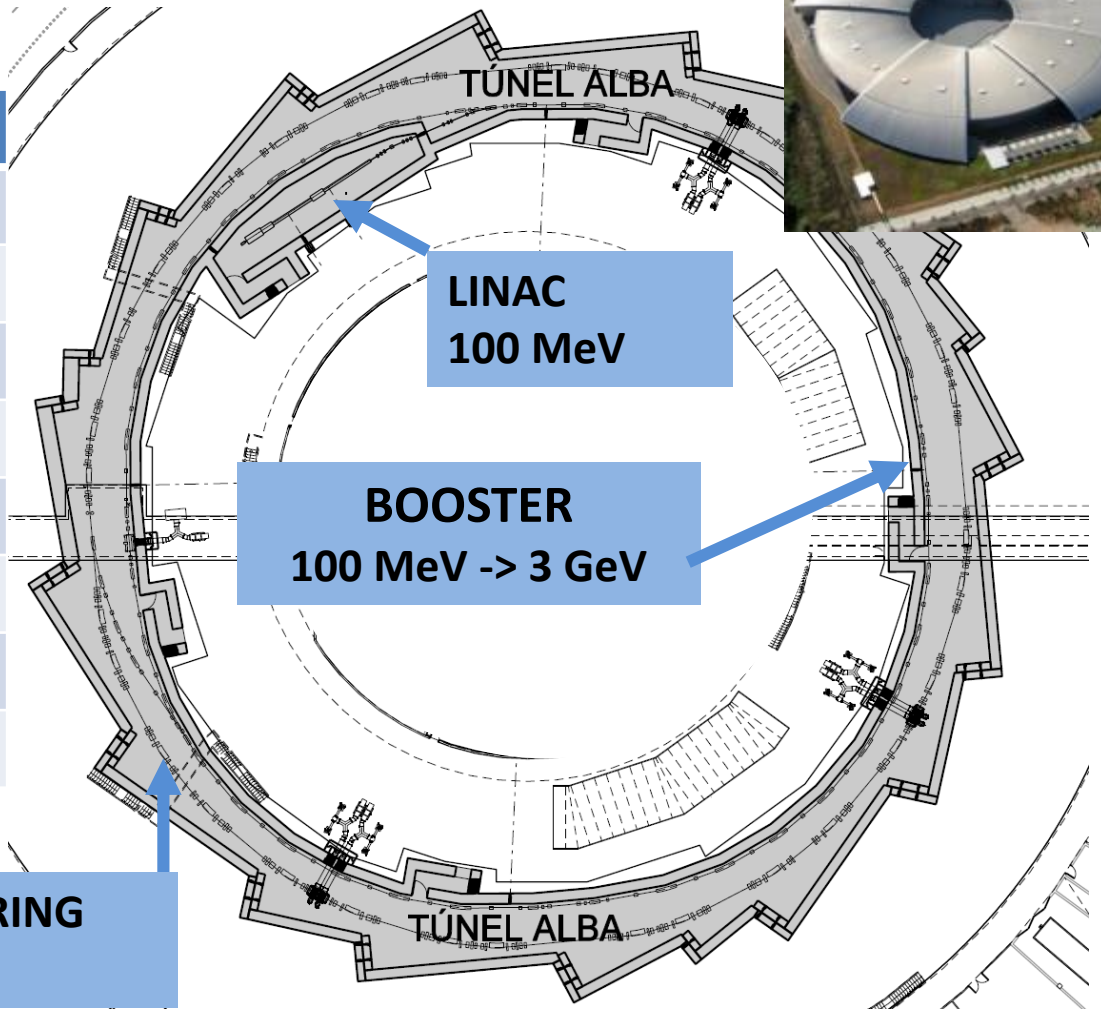


Source: Javier Sanchez Rios

Francis Perez - ALBA

ALBA Accelerators

Parameter	Value
Energy	3 GeV
Circumference	268.8 m
Emittance	4.5 nm·rad
Current	250 mA
RF frequency	500 MHz
# cavities	6
Long straights	4 (8 m)
Medium straights	12 (4 m)



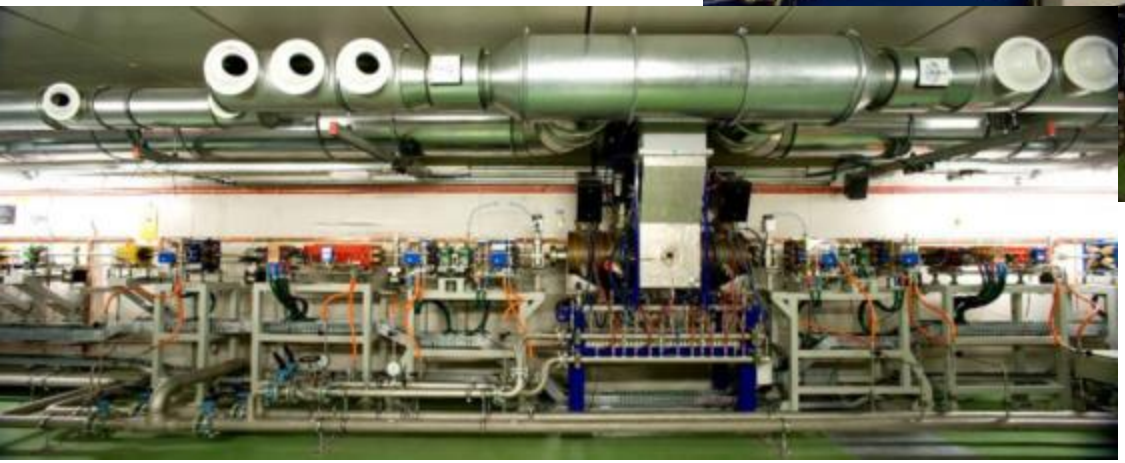
ALBA Accelerators

Linac

Accelerate electrons from rest to 100 MeV

RF cavities 3 GHz

Repetition rate of 3 Hz



Booster

Accelerate e- from 100 MeV to 3 GeV

1 x RF cavity at 500 MHz

Repetition rate of 3 Hz

Storage Ring

Keep electrons at 3.0 GeV

Magnets and correctors to keep the orbit (sub-μm)

Vacuum Pumps (10^{-10} mbar)

6 x RF cavities at 500 MHz

Circulating current: 250 mA

ALBA BEAMLINES

In operation (8)

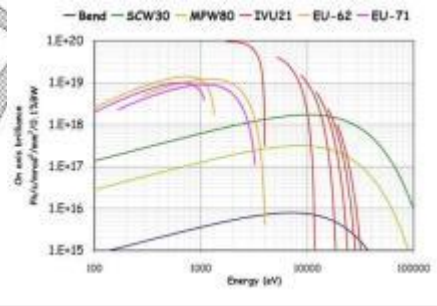
In construction (4)

BL29: BOREAS
EU71– (0.08-3 keV)
REsonant Absorption and Scattering

Bending: e⁻ Diagnostics

BL01: MIRAS
Bending – (0.4-100 μm)
IR Spectroscopy

BL24: CIRCE
EU62– (0.1-2 keV)
Photoemission spectroscopies



- Spectral range: from UV (80 eV) to hard x-rays (50 keV)
- High brilliance: 10^{20} at 2 keV

BL04: MSPD
SCW31 – (8-50 keV)
HP/HR
Powder Diffraction

BL06: XAIRA
IVUXX (~5-25 keV)
Macromolecular Cristallography

BL22: CLÆSS
MPW80– (2-63 keV)
Absorption & Emission Spectroscopies

BL09: MISTRAL
Bending– (0.27-2.6 keV)
X ray Microscopy

BL20: LOREA
EUXX– (10-450 eV)
ARPES

BL11: NCD
IVU21– (6-13 keV)
Non Cristalline Diffraction
SAXS/WAXS

BL16: NOTOS
Bending)
XAS-PD-Metrology

BL13: XALOC
IVU21 – (5-22 keV)
Macromolecular Cristallography

CONECTA

As summary, Spanish groups on accelerators have consolidated and are contributing to the development of accelerators in Spain as well as to the new international projects (CLIC, FCC, XFEL, ESS, …).

Thanks for your attention
