# 三大技术创新

## Three technical innovations

### ■ CPU+GPU异构融合体系结构

- CPU+GPU heterogeneous architecture

### ■ 64位多核多线程自主飞腾1000 CPU

- 64 bits Multi-core and Multi-thread CPU

### ■ 自主高速互连通信技术

- Self-developed High-speed interconnect communication technology

## 国际学术界的评价

### Remark from international academia

中国的“天河一号”采取的CPU与GPU融合的结构，代表了未来超级计算机的发展趋势。随着计算机规模的不断拓展，这种结构虽然不是唯一的解决方法，但目前看来是最好的。  
The architecture is not the only solution, but the best so far

-- 美国斯坦福大学计算机系主任比尔·戴利  
Billy Daley, Computer Science College, Stanford University

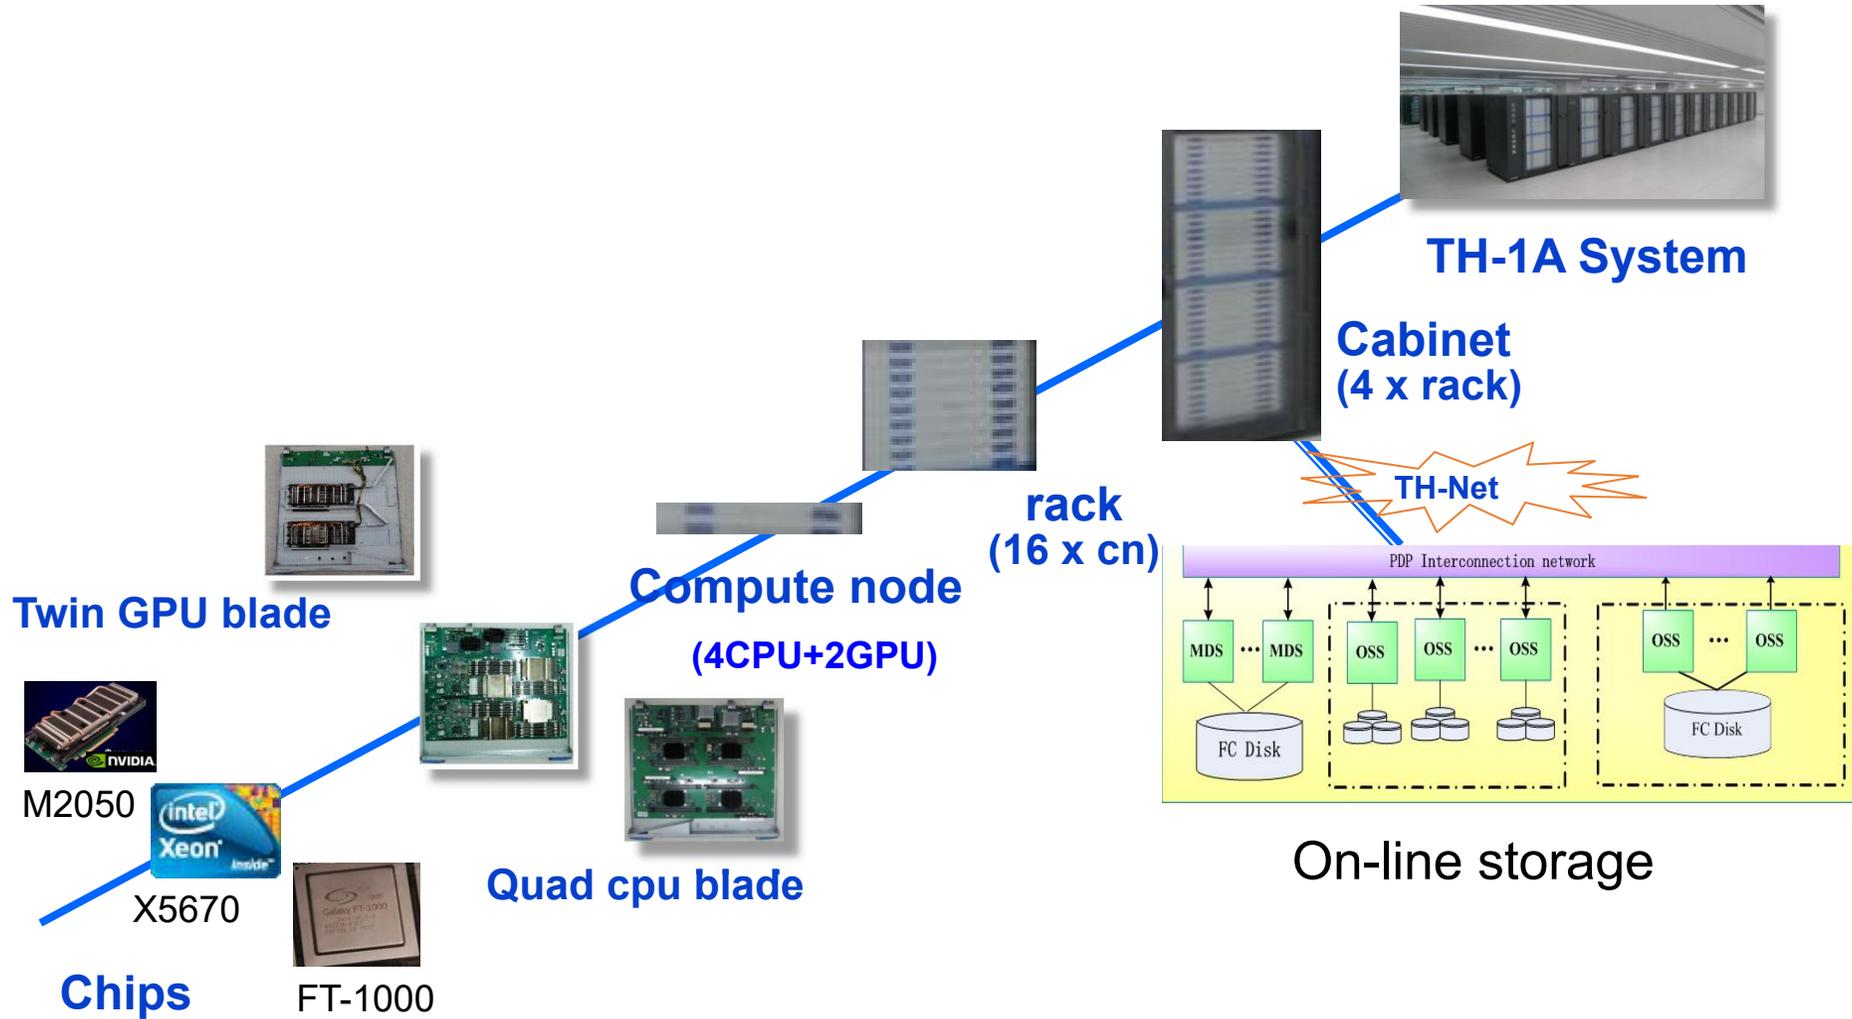

“天河一号”的运算速度比橡树岭国家实验室的要快大约40%，这是运算速率的极大提升。中国同时研制了一种互联技术，让这些处理器相互联系，这不是美国的技术，而是中国自己的技术。这是一个创举。  
The technology belongs to China, not U.S., it's a pioneering work

-- 美国田纳西大学教授杰克·唐加拉  
Prof. Jack Dongarra, Tennessee University

## Current version :

- \* A D-slash function and a simple inverter for Wilson fermion.
- Two-level parallelization with MPI for MPEs and Athread for CPEs.
- Fixed-sized data partition :  $16^4$  lattice block on each core group.
- Compression on transferring SU(3) matrix between MPEs and CPEs.
- Fully optimized with SIMD instructions.

## Working in progress :

- Adopting our “C Virtual Machine” (CVM) to achieve more FLOPs.
  - CVM is a preliminary optimization platform for Sunway architecture.
  - Gene algorithm is adopted to seek potential accelerations.
  - It is designed for lattice QCD and can be used for other applications.
- Developing an interface to QOPQDP and Chroma.

**Much more work on road!**
