Scale out Sync & Share with Seafile on Ceph

Tuesday, 17 September 2019 12:15 (25 minutes)

Seafile provides an open source solution for sync & share services like ownCloud, but with a much better performance and lower hardware needs. Using Ceph as a S3 storage backend a highly available sync & share cluster can easily be set up.

The talk will focus on practical tips for the implementation, on the fly migration to Ceph for existing installations, and especially on backup and restore scenarios on the multi terabyte scale.
