The ESS EPICS Environment E3

Thursday 6 June 2019 10:15 (20 minutes)

The EPICS development and deployment at ESS is based on the concept developed at PSI, and adapted to our specific challenges. These include dealing with many external developers in geographically separated locations, having different environments and levels of expertise. The environment E3 addresses a number of issues that we had in our first attempt but keeps the same main core concepts and goals. The goals include avoiding re-building IOCs from scratch and helping to focus on the functionality of the IOCs, and many others.

Primary authors: Dr LEE, Han (European Spallation Source ERIC); Dr KORHONEN, Timo (European Spallation Source ERIC)

Presenter: Dr KORHONEN, Timo (European Spallation Source ERIC)

Session Classification: Build and Deployment

Track Classification: Build and Deployment
