

# ICN Germanium Detector Commissioning

Alexis Aguilar-Arevalo  
for the ICN-UNAM group

Biweekly meeting GCRF , 12 Oct 2018

# Germanium Detector at ICN-UNAM

Donated by Fermilab DAMIC group at SiDet.

High Purity Germanium Detector EG&G ORTEC.

model: CNHDS30-16195 CFG: SV

S/N: 4034

Operation voltage: 3200 V negative polarity.

Fermilab S/N: 123627

Dewar "Union Carbide Corporation".

Model: LD-31

S/N: 80DC-5048

Atmospheric pressure operation

Fermilab S/N: NT11878

CANBERRA lead + Copper + Steel shield

Fermilab S/N: 12029

# Germanium Detector at ICN-UNAM

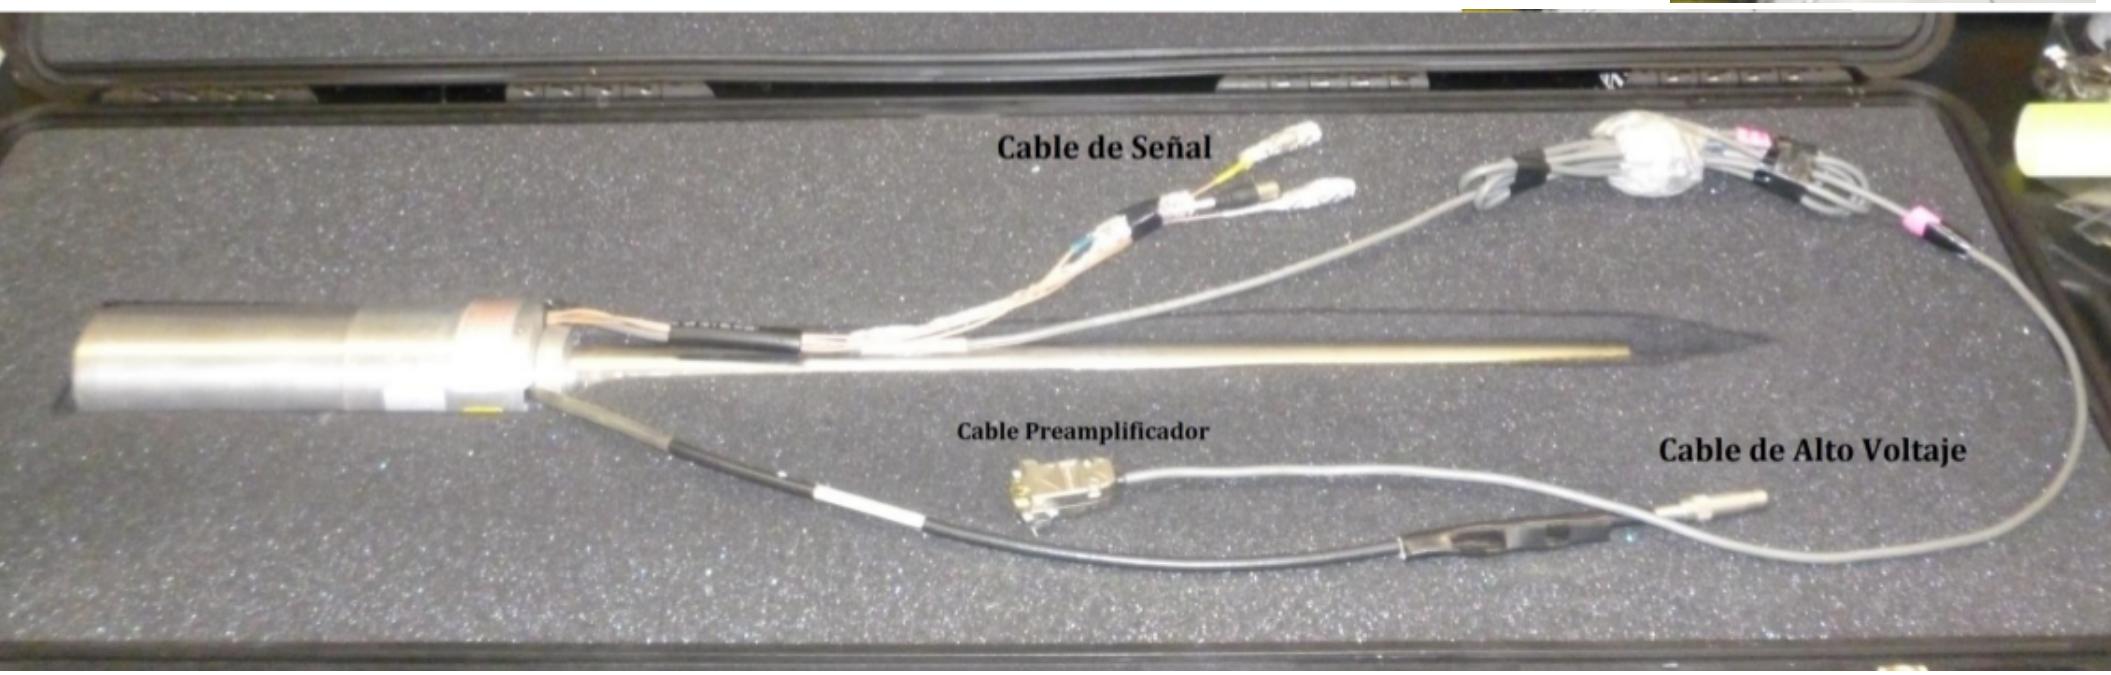

No documentation available. We know:

- Dimensions
- Operation voltage (3200 V negative polarity)
- Preamp voltages: +24 V y -24 V a 10 mA & +12 V y -12 V a 5 mA

## From comparison to current Ortec Models:

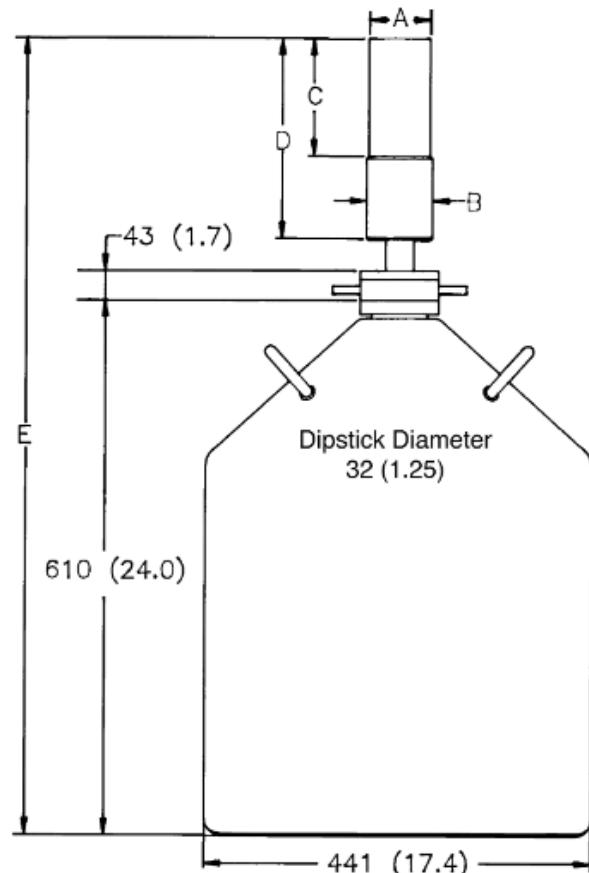

ORTEC HPGe Model GEM30P4, POPTOP CFG-SV DWR-30  
is a possible match.

- Coaxial geometry with external diffused Li contact of 700 mm and internal contact by implanted B ions (0.3 mm)
- FWHM of 0.85 keV at low energies (122 keV) and 1.85 keV at high energies(1.33 MeV).

# Possible match ...

ORTEC HPGe Model GEM30P4,  
POPTOP CFG-SV DWR-30.

CFG-SV, DWR-30

ORTEC/Ametek GEM Configuration Guide (pages 7 & 11):

Endcap Model (dia. mm)	-70	
% Efficiencies available in this endcap size	0-35	
Dim.	Unit	Tol.
A	mm (in)	0.3 (0.01) 70 (2.75)
B	mm (in)	0.3 (0.01) 75 (2.95)
C	mm (in)	5 (0.2) 134 (5.3)
D	mm (in)	8 (0.3) 250 (9.8)

# Amplifier and MCA

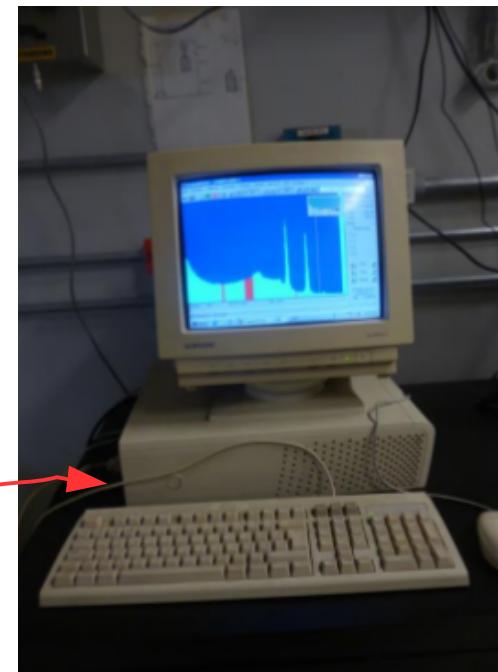

- Currently loan from irradiation unit at ICN
- Ortec 575A re-shaping amplifier.
- MCA: PCI board (ORTEC EG&G 713750 C2ML) and computer running GammaVision® software.

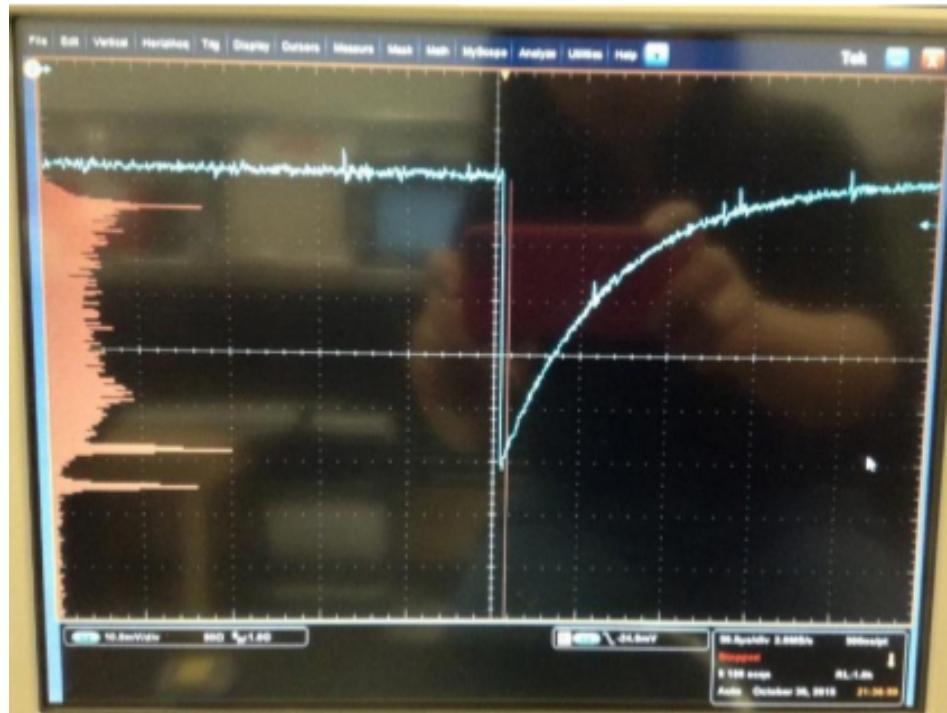

ORTEC EG&G 713750 C2ML

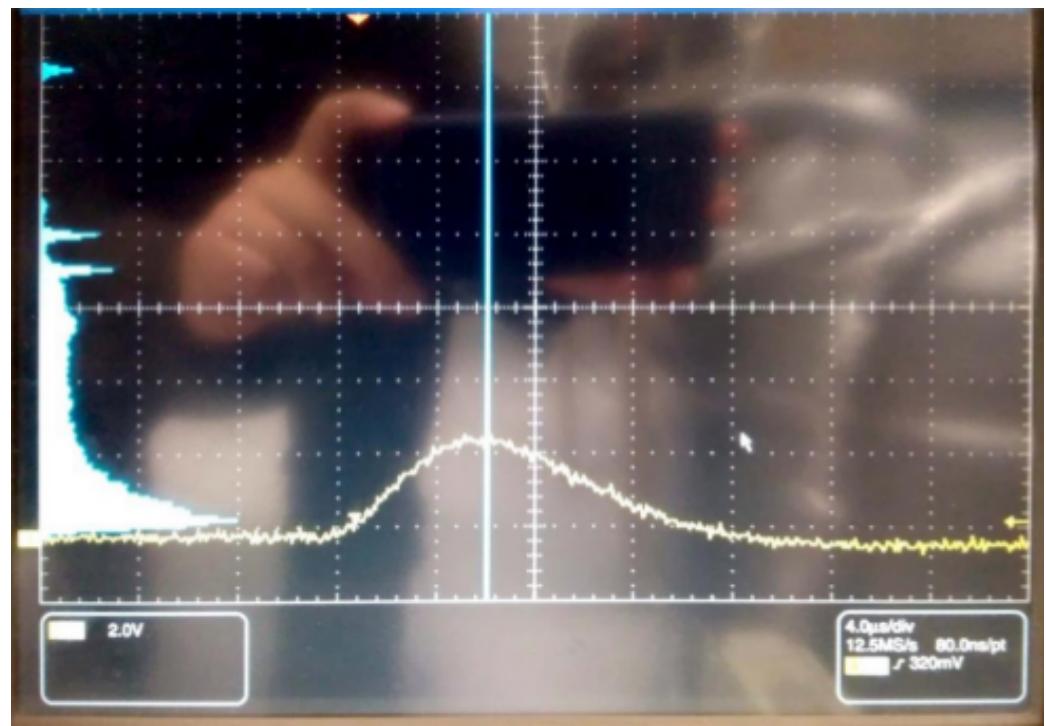

Computer from 90's

# Traces in the oscilloscope

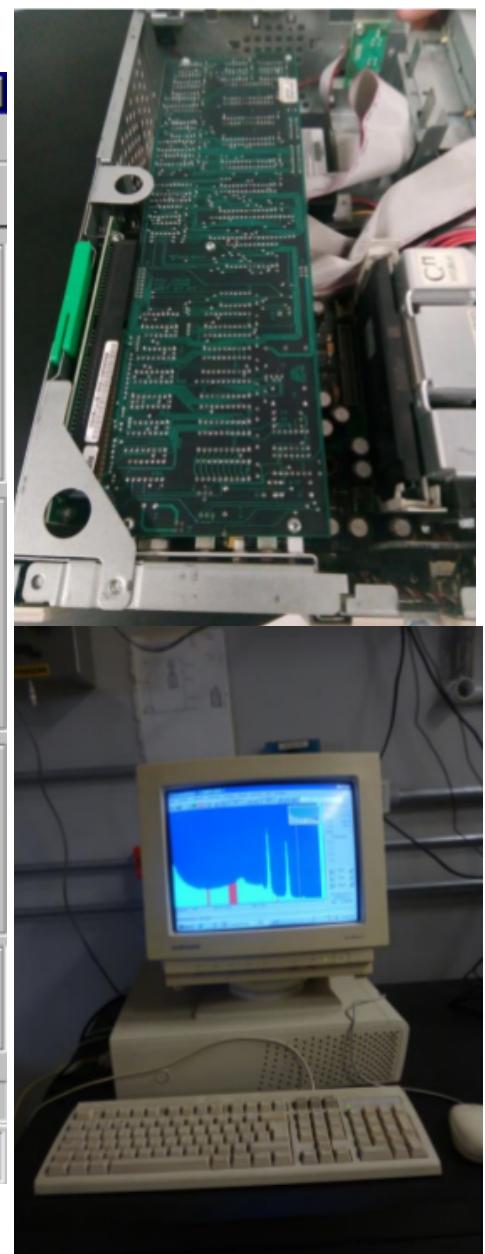

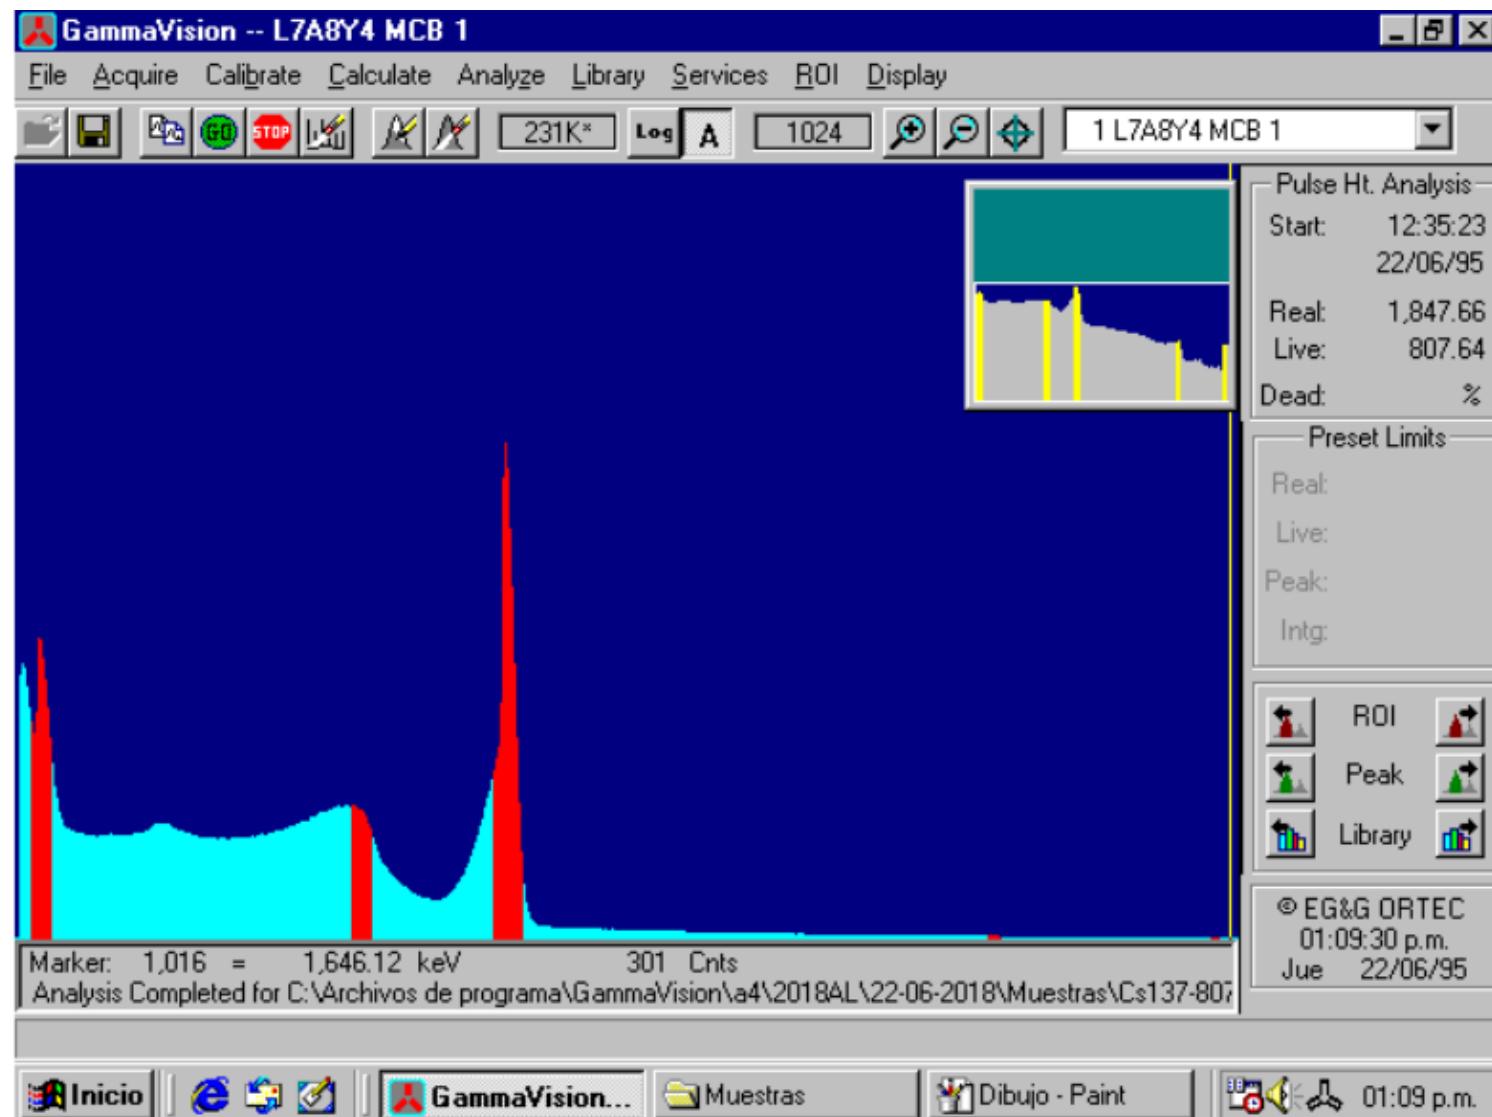

Preamplifier output  
Scope: 50 $\mu$ s/div; 10 mV/div

Re-shaped pulse (Ortec 575A)  
Scope: 4 $\mu$ s/div, 2.0 V/div

# Current status

Pb + Cu shield:

- 4 Pb cylinders stacked inside steel jacket lined with Copper.

# Current status

# Summary

- Tested the detector at our lab at ICN-UNAM. Detector seems to be working close to specifications (resolution).
- No documentation, but close match to existing ORTEC model based on exterior dimensions.
- No measure of detector efficiency yet.
- Recent tests with full Pb+Cu+steel shield show important reduction of background rate.
- Considering LN2 re-filling option (10 L/ week) with a local vendor.
- Will test detector with ICN from IF-UNAM (Eric)

Thanks to CINVESTAV students (Guadalupe Moreno, Johan Chávez, Karen Meza) and Mauricio Martínez (Technician ICN-UNAM) for helping with the measurements and setup!
