Correlator (TkMu, TkMuStub,, PF, HigherLevelObj)

Maximally useful MC samples

- MC Prod **PhasellFall17** (CMSSW_9_3_7) included **all Muon Phasell Detectors**, Calorimetry (Barrel Ecal, Barrel HCAL, HGCal v8), Tilted Tracker
- If Detector geometry does not change, that is to say if the Detector digis are available, one has a complete freedom in designing all the steps in the Trigger chain down-stream.
 - Muon TriggerPrimitive design
 - Muon TrackFinder design
 - Correlator design
 - GlobalTrigger
 - Menu
- The model L1T has adopted for Phase-2 MC production to cope with still ongoing developments for Trigger Primitives
 - Step1 Run GEN-SIM → Write GEN-SIM
 - Step1 Run DIGI → Write out GEN-SIM-DIGI-RAW (full detector Digi), total size 1PB
- PU (both in-time and OOT) is done at DIGI step
 - Via MixingModule - overlay MinBias events
 - Poisson average nPU, with a bunch spacing of 25 ns, for a BX window [-12, 3]
 - Keep Truth TrackingParticles ($pT > 1 \text{ GeV}$), increasing EvtSize (50 MB)
- Aging
 - Only applied in Barrel Calorimetry...(for muons can do a posteriori)

PhaseII Fall17 MC Production

2	All samples need DIGI, but not RECO in first instance				
3	Keep RAW+calo digit+tracker stubs to re-run L1 (and optionally RECO in future)				
4					
5	Sample	N event	PU	Notes	PhaseII Fall17 MC Prod Status
6	Rates				Samples In DAS
7	MinBias	100M	n/a	GEN-SIM only, for PU overlay (use existing if available)	
8	Neutrino gun	50k	140,200	Staged production (26% uncertainty at 10kHz)	DONE
9		500k	140,200	Staged production (8% uncertainty at 10kHz)	
10		250k	250,300		DONE, PRODUCTION
11	L1 reco studies				
12	Muon +/- gun	250k	0,140,200	flat pT [2,100] GeV, $ \eta < 2.6$	DONE
13	Electron +/- gun	250k	0,140,200	flat pT [2,100] GeV, $ \eta < 3.1$	DONE
14	Tau +/- gun	250k	0,140,200	flat pT [2,150] GeV, $ \eta < 3.1$	DONE
15	Pt +/- gun	500k	0,140,200	flat pT [2,100] GeV, $ \eta < 5.2$	DONE
16	PID gun	500k	0,140,200	flat pT [8,100] GeV, $ \eta < 5.2$	DONE
17	Photon gun	250k	0,140,200	flat pT [8,150] GeV, $ \eta < 3.1$	DONE
18	QCD	500k	0,140,200	flat pT+rat [0, 1000] GeV, $ \eta < 5.2$	DONE
19	Quark-initiated jet gun	600k	0,140,200	flat pT [50,300] GeV, $ \eta < 5.2$	DONE
20	Gluon-initiated jet gun	600k	0,140,200	flat pT [50,300] GeV, $ \eta < 5.2$	DONE
21

43	HSCP stau (mass 200 and 671)	100k x 2	0-140-200			DONE
44						

Need to re-produce displaced Mu samples, and other interesting Muon samples

This can be done faster via RelVal MC workflows (9k evt/sample should be enough)

Shorter turn-around time ~ 2 weeks)

MC production 2019

- Samples:
 - Same as for Fall17 MC production,
 - all completed by now, except displaced Mu that will probably have to have config put in the CMSSW.
 - Any additional samples, please speak up.
- In immediate/not so far future there are two Phase-2 MC prod scheduled
 1. MTD: Nov 2018 to Feb 2019 (immediate attention... we are coordinating w/ PPD, MTD)
 - Release CMSSW_10_4_0_pre(2/3)
 - FEATURING: full simulation of MTD, and final geometry v9 HGCal D35 = D33 +v9HGCal
 - STATUS: Built but currently crashing, needs patches. ETA, hopefully this week
 - Timeline of MC production submission
 - MinBias 20M, GEN-SIM start end of Nov '18 (as soon as rel is fixed)
 - Object samples, GEN-SIM → DIGI → RECO, saving only RECO, start 15.Dec
 - Physics samples, GEN-SIM →DIGI→ RECO, saving only RECO, start 15 Jan
 - Resources: request is shown in back-up.....note MinBias 20 M
 - L1T want to piggy-back on MTD MC production .
 - Need to ensure large enough sample of MinBias used for PU, 100 M , 200 M ?
 - For evaluation of HGCal v9 geometry effect on L1T, save GEN-SIM-DIGI-RAW produced during step2 of MTD production for a subset of samples
 - NuGun, Ttbar, VBF/GGF (H->gg, H->tautau, H->ZZ4L, H->bb) , HH->bbgg, Wlnu,
 - 500k + 1M + 2*(100k + 100k + 100k + 100k) + 100k = 2 Mevents = 100 TB

MC production 2019 (cont.)

- In immediate/not so far future there are two Phase-2 MC prod scheduled

2. L1T & HLT: Q2 2019 (in coordination with HLT)

- Release CMSSW_10_4_X, featuring (expecting)
 - L1TTT code (probably some synthesis of Tracklet/TMTT)
 - HGCal TPs for v9 geometry
 - Can we also get new Muon Phase-2 TPs?
 - » in my view, we will probably know during the joint MuonDPG-MuonL1T workshop Nov '18)

CMSSW for Phase2 L1T

- Twiki: <https://twiki.cern.ch/twiki/bin/view/CMSPublic/SWGuideL1TPhase2Instructions>
- Code integration on <https://github.com/cms-l1t-offline/cmssw/>
branch phase2-l1t-integration-CMSSW_10_1_7
- Phase-2 L1T SW code: DataFormats, producers, workflows (i.e. sequences), era Modifiers, customizations)
- Recipe to use latest version of code -> Run steps TriggerPrimitives, TrackTrigger (Tracklet/TMTT), L1T, Ntuple with examples:

```
git CMSSW_10_1_7

cmsrel CMSSW_10_1_7
cd CMSSW_10_1_7/src
cmsenv
git cms-init
git remote add cms-l1t-offline git@github.com:cms-l1t-offline/cmssw.git
git fetch cms-l1t-offline phase2-l1t-integration-CMSSW_10_1_7
git cms-merge-topic -u cms-l1t-offline:l1t-phase1-v2_16_42

# #####
# TMTT tracks - if you want to use them uncomment below
# This will merge the TMTT code in your local working branch
# N.B. These instructions should be updated. Latest TMTT tracks are in branch TMTT_1025, not TMTT_938
# #####
# git checkout -b mydevel
# git remote add -l TMTT_938 TMTT https://github.com/CMS-DT/TMTT/cmssw.git
# git fetch TMTT TMTT_938
# git cms-merge-topic -u CMSSW_9_3_0 CMS-TMTT-TMTT_938
# git merge --no-ff TMTT_938 mydevel
#
# ##### cmsRun L1Trigger/TrackFindingTMTT/dv:hos/TMTrackProducer_Ultimate_cff.py
# #####
# #####
# EB TPs - If you want to use private development not yet in CMSSW uncomment below
# This will merge the EB TP code of N.M. rebased in 10_1_7 in your local working branch
# #####
# git checkout -b mydevel
# git cms-merge-topic -u rekovic:NM_TP_PhaseII_V1_10_1_7
# #####
```

Aging of Muon Detectors

- Aging of Muon detectors in CMSSW phase2-l1t-integration
 - Tag *phase2-v2.16.23*
- Apply masking of Muon detector digis (DT, CSC, RPC, GEM)
with probability provided by Lumi scenario via GlobalTag
- Aging is invoked via customizations of “L1T” step
 - customise=L1Trigger/Configuration/customiseUtils.appendDTChamberAgingAtL1Trigger
 - customise=L1Trigger/Configuration/customiseUtils.appendCSCChamberAgingAtL1Trigger
 - customise=L1Trigger/Configuration/customiseUtils.appendRPCChamberAgingAtL1Trigger
 - customise=L1Trigger/Configuration/customiseUtils.appendGEMChamberAgingAtL1Trigger

Or all together in future tag (will announce)

--customise=L1Trigger/Configuration/customiseUtils.appendMuonChamberAgingAtL1Trigger
- and muon Phase2 L1T sequence is configured to run on aged digis
- Amount of aging is scenario provided in GT
 - Example ‘100X_upgrade2023_realistic_Candidate_2018_07_26_10_13_24’

Pure L1 algos: Muon, EG, Tau, Jet, MET, HT

	Rates (kHz)	Thresholds (‘offline’, GeV)	Additional requirements
L1_SingleTkMu (single muon)	18.7	22	$ \eta < 2.4$
L1_DoubleTkMu (double muon)	1.5	15,7	$ \eta < 2.4, dZ < 1\text{cm}$
L1_TripleTkMu (triple muon)	11.9	5,3,3	$ \eta < 2.4, dZ < 1\text{cm}$
L1_SingleTkEle (single electron)	95.8	36	$ \eta < 2.4$
L1_SingleTkEleIso (single electron iso)	90.5	28	$ \eta < 2.4$
L1_SingleTkEMIso (single photon iso)	66.4	36 (NA Now)	$ \eta < 2.4$
L1_TkEleIso_EG (single ele iso + EG)	59.8	22,12	$ \eta < 2.4$
L1_DoubleTkEle (double ele)	67.0	25,12	$ \eta < 2.4, dZ < 1\text{cm}$
L1_DoubleTkEMIso (double photon iso)	23.1	22, 12 (NA Now)	$ \eta < 2.4$
L1_SinglePFTau (single tau)	7.9	120	$ \eta < 2.1$
L1_PFTau_PFTau (double tau)	4.0	70,70	$ \eta < 2.1$
L1_PFIsoTau_PFIsoTau (double tau iso)	11.8	44, 44 (33,33 Now)	$ \eta < 2.1$
L1_SinglePfJet (single jet)	54.4	180 (200 Now)	$ \eta < 2.4$
L1_DoublePFJet_dEtaMax (double jet dEta)	62.8	125,125 (112,112 Now)	$ \eta < 2.4, d\eta < 1.6$
L1_PFHT (ht)	19.7	360	
L1_PFMet (met)	71.7	150	

Now = 2018 data taking (2.0E34)

Cross triggers: Mu+X, EG+X_(X!=Mu), Tau+X_(X!=Mu,EG), Jet+X_(X!=Mu,EG,Tau)

	Rates (kHz)	Thresholds ('offline', GeV)	Additional requirements
L1_TkMu_TkEGIso (mu,eleiso)	3.3	7,20	$ \eta < 2.4$, $dZ < 1\text{cm}$
L1_TkMu_TkEG (mu,ele)	9.1	7,23	$ \eta < 2.4$, $dZ < 1\text{cm}$
L1_TkEG_TkMu (ele,mu)	4.2	10,20	$ \eta < 2.4$, $dZ < 1\text{cm}$
L1_TkMu_DoubleTkEle (mu,ele,ele)	2.7	6,17,17	$ \eta < 2.4$, $dZ < 1\text{cm}$
L1_DoubleTkMu_TkEle (mu,mu,ele)	9.4	5,9,9	$ \eta < 2.4$, $dZ < 1\text{cm}$
L1_TkMu_PfHTT (mu,HT)	6,7	6,240	$ \eta < 2.4$, $dZ < 1\text{cm}$
L1_TkMu_PFJet_dRMax_DoubleJet_dEtaMax (mu, jet, jet)	18.7	12,40,40	$ \eta < 2.4$, $dR < 0.1$, $d\eta < 1.6$, $dZ < 1\text{cm}$
L1_TkMu_PfJet_PfMet (mu,jet,met)	37.4	3,120 (100 Now),60	$ \eta < 2.1/2.4$, $dZ < 1\text{cm}$
L1_DoubleTkMu_PfJet_PfMet (mu,mu,jet,met)	22.7	3,3,60,70	$ \eta < 2.4$, $dZ < 1\text{cm}$
L1_DoubleTkMu_PfHT (mu, mu, ht)	3.3	3,3,220	$ \eta < 2.4$, $dZ < 1\text{cm}$
L1_DoubleTkEle_PfHT (mu, ele, ht)	21	8,8,300	$ \eta < 2.4$, $dZ < 1\text{cm}$
L1_TkEleIso_PfHT (eleiso, HT)	21.9	26,100	$ \eta < 2.4$, $dZ < 1\text{cm}$
L1_TkEle_PFJet_dRMin (ele, jet)	103.1	28,60 (34 Now)	$ \eta < 2.1/2.4$, $dR > 0.3$, dZ
L1_PFIsoTau_TkMu (taulso, mu)	8.9	24,18	$ \eta < 2.1/2.4$, $dZ < 1\text{cm}$
L1_TkEleIso_PFIsoTau_dRMin (eleiso, taulso)	41.7	22, 26	$ \eta < 2.1/2.4$, $dR > 0.3$, dZ
L1_PFIsoTau_PFMet (taulso, met)	14.5	50,(40 Now) 120	$ \eta < 2.1$
L1_PFHHTT_QuadJet (ht, quadjet)	21.2	320, 70,55,40,40	$ \eta < 2.4$

TOTAL RATE

477

PU dependence (preliminary)

- Latest results of PU dependence of TkMu (L1TTTk+MuTF) paths implemented in v6 Phase2 L1T Menu....
- this remains to be understood as Barrel, Overlap, and EndCap use different matching algos

- Advice, use stress test PU 250 and 300 to test your TriggerPrimitives and L1T rates.

Steps Forward in Phase2 Muon -> Level1 Trigger

- Reprocessing MC Samples - New Trigger Primitives
 - Because of the MC Production model we adopted, and because the Phase2 Muon geometry included in the production has not changed we are in the position to
 - Run any newly developed algorithms for Muon TPs.
 - Running Muon TPs and L1T sequence is fast and can be done “on-fly” (when Ntuplizing) if it was not for re-running L1TTrackTrigger.
 - Solution: we saved Muon Digits in reprocessed samples (dropped Tracker Digits), so can run Muon TPs on re-processed samples.
 - At the moment, we are not exploiting nor running any Phase2 Muon TPs
 - Some available in CMSSW floating point (eg. DTTPs, see Camillo’s talk)
 - Some need developments (eg ME0, iRPCs, fitted CSCs)
 - As outcome of this workshop, I hope we can get a list of new Muon Phase2 TPs that we can already integrate and get an idea when the missing ones will be provided.
- New MC Samples
 - We can use the L1T Phase2 Fall17 MC campaign existing (
 - We do know that we need some new MC samples (RelVal size samples are OK)
 - If out of this Workshop we realize we need new interesting signal samples, please communicate via Muon L1T Group (Costas & Jaco). If sample non produced before in CMSSW need to provide configurations.
