

# Jet EDM Status

P.A. Delsart, P.O.  
DeViveros

Laboratoire de Physique Subatomique et Corpusculaire  
CNRS/IN2P3

# Changes since early 16 release

## ■ Mostly bug fixes

*A. Author1,  
B. Author2*

- Jets in ARA should fully work. Many thanks to Scott

## ■ Size on disk changed for reprocessing :

- Added more moments per jets
- 2 new Jet collections 'TopoEMJets'

## ■ Signal State

- Adding a new helper class JetSignalStateHelper
- Generalization of sig state. Means to ease retrieval of alternative calib scheme stored in jet moments.

# Planned request from Jet group

- Jet finding on top of AOD partly broken
  - Cleaning variables un-recomputable from AOD
- Could be solved if Clusters embedded cleaning variables
- Studies in progress to understand which variables are needed

**Jet/Etmiss group will probably request more Cluster variables**

Can balance the increase by removing jet moments/collections
