Separation and crossing scheme, minimum beta star

Tuesday, 19 January 2010 17:15 (20 minutes)

- Results from first operation, news for 2010.
- Performance, measurements vs. expectations (improvements of online model)
- Strategy to bring up luminosity performance
- Optimized behaviour vs energy and beta* -> How to handle this in LSA
- Problems encountered, is related software sufficient, necessary improvements, appropriate for 3.5TeV running?
