SuperKEKB Phase 3 (Belle II Physics Run) Starts

Belle II and SuperKEKB are poised to become the world's first Super B factory facility. Belle II aims to accumulate 50 times more data than its predecessor, Belle, and to seek out new physics hidden in subatomic particles that could shed light on mysteries of the early universe.

SuperKEKB Phase 3 (Belle II Physics Run) Starts

2019/03/11 Pressrelease ACC IPNS

On March 11th, 2019, Phase 3 operation of the SuperKEKB project began, marking a major milestone in the development of Japan's leading particle physics facility. The first phase will be the physics run of the project, in which the Belle II experiment will be taking data with a fully instrumented detector.

The KEKB accelerator, operated from 1999 to 2010, currently holds the world record for the highest luminosity of a particle accelerator.

LHCONE: GEANT-RENATER

21/05/2019

4x10 Gb/s between ccpn-inter and LHCONE (but it looks like there is a limitation at 20 Gb/s here; a ticket is opened with RENATER, the french NREN providing the LHCONE

link, they are investigating).
