Unplugged Computing for Children

CHEP2019, Adelaide

Authors: Maria Alandes Pradillo (CERN), Eszter Badinova (CERN), Natalie Kane (CERN), Simona Kriva (CERN), Hannah Short (CERN)
What?

“Unplugged” programming refers to programming without a computer.
Why?

- Strong **demand** for computing tutorials for children from parents and the general public
- Many individuals working in Computing are keen to encourage the **next generation** and address **pipeline diversity** issues
- Bringing computers adds logistical difficulty, cost, distraction and is an extra learning curve for some children
- Enables high degree of interaction with participants
**How?**

Tutorials developed primarily for 6 - 9 year olds. In **French** and **English**.

<table>
<thead>
<tr>
<th>Tutorial</th>
<th>Summary</th>
</tr>
</thead>
<tbody>
<tr>
<td>Introduction to Programming</td>
<td>Participants learn about logic, loops and conditional statements using only paper components.</td>
</tr>
<tr>
<td>What's inside a Computer?</td>
<td>A basic introduction to Memory, CPU and graphical processors. Participants build a paper model.</td>
</tr>
</tbody>
</table>
Introduction to Programming

- Based on 1,2,3 Codez, a French project to introduce students and teachers to computer science
- Supported by the foundation La main à la pâte, created in 2011 by the Académie des sciences and the Ecoles normales supérieures de Paris et de Lyon
- Participants take home a booklet containing further exercises
What’s inside a computer?

- Inspired by *Hello Ruby Tutorial, My First Computer*
- Role playing game extensions developed by CERN volunteers
- Participants take home a **paper model** of a computer
Who?
The Women in Technology Community at CERN has been driving this initiative. Visit cern.ch/wit/outreach
What have we done so far?

During 2019 we have tutored approximately 450 children. Volunteer pool of men and women comprised of CERN members and alumni.

- March 9: Semaine de L’Egalité (~80)
- April 25: Girls in ICT Day (~50)
- September 14-15: CERN Open Days (~250)
- October 5: EU Code Week (~80)
Lessons learnt

- Wide variation in computer literacy, must be able to adapt to children’s level
  - School curriculum
  - Parental Engagement
- Interested children return - more material needed!
- Time consuming - incentives (e.g. free T-Shirt, recognition as official CERN activity...) aid volunteer recruiting
- Children and parents want to continue at home, more awareness needed of available resources
Next Steps

- Continue and expand to older age groups
- Hope that Science Gateway (see Poster) will provide venue and resources for sustained workshop agenda
- Workshop material to be improved and made available
Get involved!
