## 24th International Conference on Computing in High Energy & Nuclear Physics

Contribution ID: 512 Type: Oral

## The official website of the AMS experiment

Tuesday 5 November 2019 16:45 (15 minutes)

The Alpha Magnetic Spectrometer (AMS) is a particle physics experiment installed and operating on board of the International Space Station (ISS) from May 2011 and expected to last through Year 2024 and beyond. Aiming to explore a new frontier in particle physic, the AMS collaboration seeks to store, manage and present its research results as well as the details of the detector and the operations through an official website. An open-source content management framework is employed as the platform to build the website, which allows to manage a variety of information, e.g., institutes in the collaboration, physics results, publications, academic events, etc. The motivation of the website, the development strategy, the infrastructure, the web design concepts and technics, the development of the custom modules, and the strategy and implementation of the science data sharing and preservation are discussed.

## Consider for promotion

No

**Authors:** WEI, Jiahui (Universite de Geneve (CH)); SHAN, Baosong (Beihang University (CN)); XU, Yonghuan (Southeast University (CN)); Mr QU, Zhaoyi (Academia Sinica (TW)); Mr BEHLMANN, Matthew Daniel (Massachusetts Inst. of Technology (US)); PASHNIN, Andrey (Massachusetts Inst. of Technology (US)); KONYUSHIKHIN, Maxim (Massachusetts Inst. of Technology (US))

Presenter: WEI, Jiahui (Universite de Geneve (CH))

Session Classification: Track 8 – Collaboration, Education, Training and Outreach
