# The DQM4hep project

<https://github.com/DQM4hep>

DQM4hep: Data quality monitoring for high energy physics

- Experiment agnostic data monitoring toolkit for online/offline use
- Development started in IPNL in 2015
- Interest growing in LC and LHC communities
- DQM4hep adopted as online monitoring tool for AIDA WP5
  - *Task 5.4 Development of data quality and slow control monitoring*

Project status:

- Project development staled mid-2018: lack of resources
- Could be re-activated in the context of AIDA++ ?
- Next large scale software project with strong synergy within the HEP community ?
