## The 21st International Workshop on Neutrinos from Accelerators (NUFACT2019)

Contribution ID: 85 Type: Oral Presentation

## Search for charged lepton flavor violation in J-PARC: COMET experiment

Thursday 29 August 2019 14:00 (30 minutes)

As the lepton number and lepton flavor are conserved quantities in Standard Model, observation of charged lepton flavor violation (cLFV) process will provide clues on beyond-Standard model theories. COMET is an experiment at J-PARC, Japan, which will search for neutrinoless conversion of muons into electrons in the field of a nucleus ( $\mu$ - + N  $\rightarrow$  e- + N); a lepton flavor violating process. The experimental sensitivity goal for this process is order of 10^-15 for Phase-I and 10^-17 for Phase-II experiment, which is a factor of 100-10000 improvements correspondingly over existing limits. Recent progresses in facility and detector development will be presented, along with COMET Phase-I and Phase-II experimental schedule.

## **Working Group**

WG4: Muon Physics

Primary author: Mr XING, Tian-Yu (IHEP)

Co-authors: COMET COLLABORATION; LEE, MyeongJae (IBS)

**Presenter:** Mr XING, Tian-Yu (IHEP)

Session Classification: Working Group 4
