Field electron emission in an external magnetic field parallel to the surface

Monday, 16 September 2019 18:30 (5 minutes)

The work concerns relativistic effects and the influence of an external magnetic field on the transmission coefficient. The Fowler-Nordheim equation has been relativistically generalized and effect of the Lorentz contraction of a potential barrier at the metal-vacuum interface has been found. Influence of the magnetic field parallel to a metal surface on the transmission coefficient is taken into account when $cB < E$.
