EOS Testing Service development: leveraging CI + Kubernetes

Monday, 4 February 2019 11:10 (15 minutes)

Development work-flows and quality assurance of tagged releases are of pivotal importance in any large scale software project environment.

In order to prepare EOS for the upcoming storage challenges of LHC run 3, the next evolution in the CI framework is to add a fully automated distributed EOS storage setup and testing deployment using the Kubernetes/OpenShift platform provided by CERN IT.
