4-fermion operators

First lecture recap

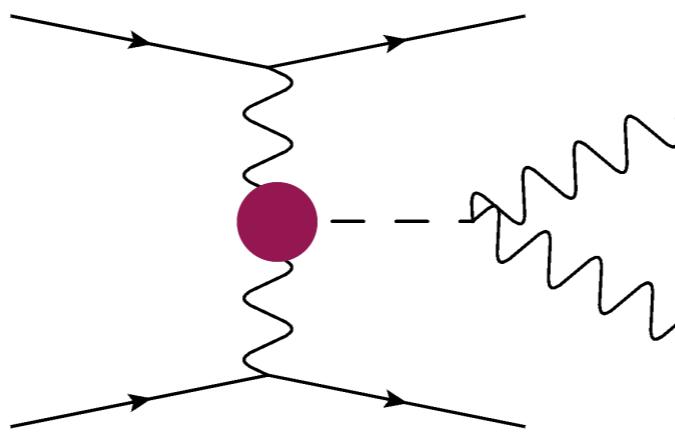

- SMEFT:
 - only SM fields
 - respecting SM symmetries ✓
 - valid below scale Λ
- Gauge invariant ✓
- Higher-order corrections: renormalisable order by order in $1/\Lambda$
$$\mathcal{O}(\alpha_s) + \mathcal{O}\left(\frac{1}{\Lambda^2}\right) + \mathcal{O}\left(\frac{\alpha_s}{\Lambda^2}\right) + \dots$$
- Complete description ✓
- Model Independent ✓

EFT in VBS

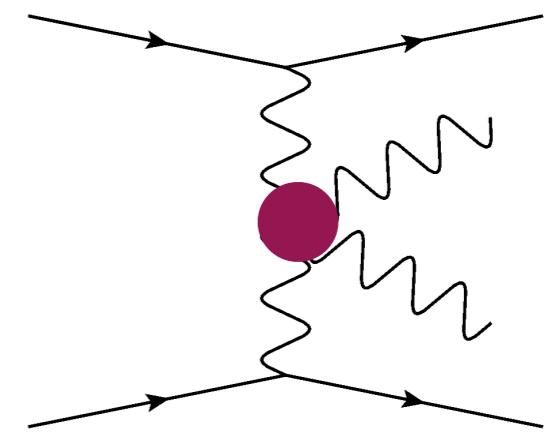

VBS is interesting as it probes:

TGC

Higgs couplings

QGC

Connection to dibosons, Higgs physics, EWPO etc

dim-6 operators in VBS

$$\mathcal{O}_{WWW} = \text{Tr}[W_{\mu\nu} W^{\nu\rho} W_\rho^\mu]$$

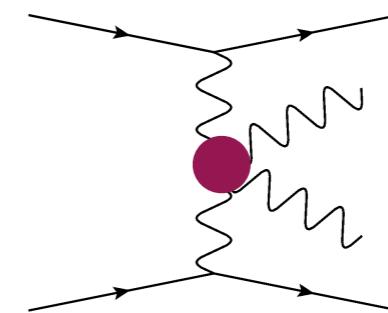

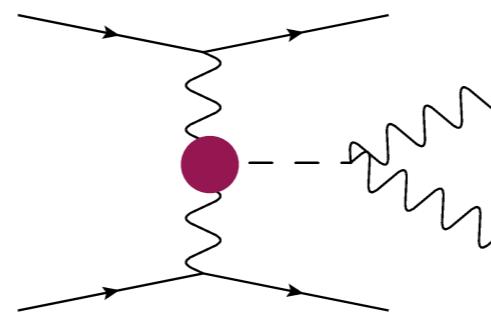

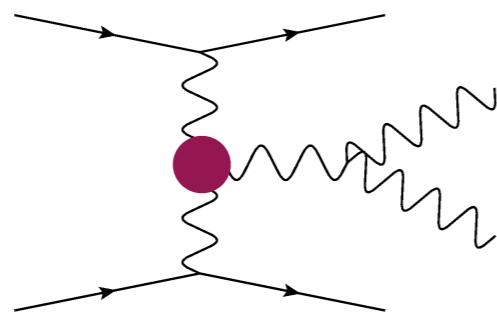

$$\mathcal{O}_W = (D_\mu \Phi)^\dagger W^{\mu\nu} (D_\nu \Phi)$$

$$\mathcal{O}_B = (D_\mu \Phi)^\dagger B^{\mu\nu} (D_\nu \Phi)$$

$$\mathcal{O}_{\partial\Phi} = \partial_\mu (\Phi^\dagger \Phi) \partial^\mu (\Phi^\dagger \Phi)$$

$$\mathcal{O}_{\Phi W} = (\Phi^\dagger \Phi) \text{Tr}[W^{\mu\nu} W_{\mu\nu}]$$

$$\mathcal{O}_{\Phi B} = (\Phi^\dagger \Phi) B^{\mu\nu} B_{\mu\nu}$$

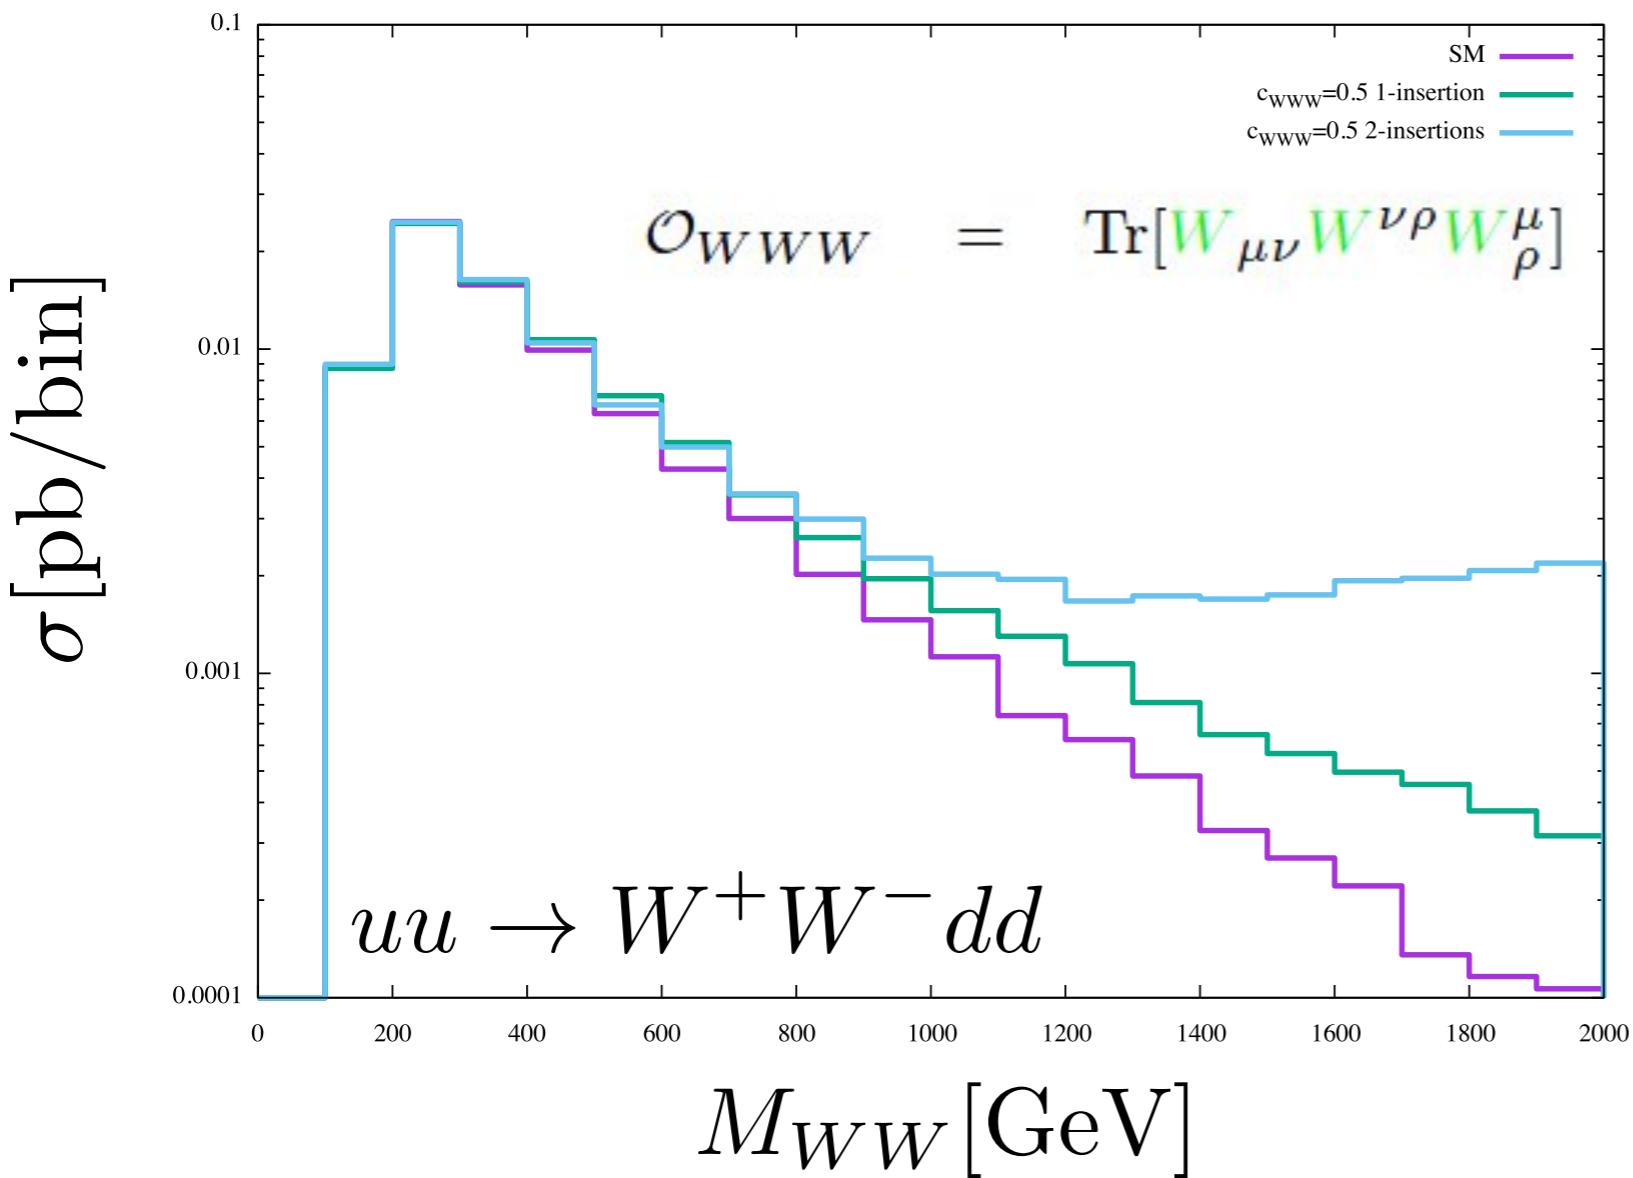

How do these operators change the VBS process:

	ZWW	AWW	HWW	HZZ	HZA	HAA	WWWW	ZZWW	ZAWW	AAWW
\mathcal{O}_{WWW}	✓	✓					✓	✓	✓	✓
\mathcal{O}_W	✓	✓	✓	✓	✓		✓	✓	✓	
\mathcal{O}_B	✓	✓		✓	✓					
$\mathcal{O}_{\Phi d}$				✓	✓					
$\mathcal{O}_{\Phi W}$				✓	✓	✓				
$\mathcal{O}_{\Phi B}$				✓	✓	✓				

TGC Higgs QGC

How does a dim-6 operator affect VBS?

Multiple insertions can be relevant for large couplings

Going beyond dim-6: Why also dim-8 in VBS?

- At dimension-6 TGC and QGC are correlated
- Dimension-6 operators do not allow a fully generic parametrisation of the helicities of the 4 gauge bosons
- New physics may appear at tree-level for the dimension-8 operators compared to one-loop level for dimension-6 operators
- There are UV theories which predict dominance of dim-8 operators
- Dimension-6 operators entering VBS can be probed more precisely in other processes: VV and Higgs production, QGC are unique to VBS

dim-8 operators in VBS

Longitudinal

$$\begin{aligned} O_{S,0} &= [(D_\mu \Phi)^\dagger D_\nu \Phi] \times [(D^\mu \Phi)^\dagger D^\nu \Phi] \\ O_{S,1} &= [(D_\mu \Phi)^\dagger D^\mu \Phi] \times [(D_\nu \Phi)^\dagger D^\nu \Phi] \\ O_{S,2} &= [(D_\mu \Phi)^\dagger D_\nu \Phi] \times [(D^\nu \Phi)^\dagger D^\mu \Phi] \end{aligned}$$

$$\begin{aligned} O_{M,0} &= \text{Tr} \left[\hat{W}_{\mu\nu} \hat{W}^{\mu\nu} \right] \times [(D_\beta \Phi)^\dagger D^\beta \Phi] \\ O_{M,1} &= \text{Tr} \left[\hat{W}_{\mu\nu} \hat{W}^{\nu\beta} \right] \times [(D_\beta \Phi)^\dagger D^\mu \Phi] \\ O_{M,2} &= \left[\hat{B}_{\mu\nu} \hat{B}^{\mu\nu} \right] \times [(D_\beta \Phi)^\dagger D^\beta \Phi] \\ O_{M,3} &= \left[\hat{B}_{\mu\nu} \hat{B}^{\nu\beta} \right] \times [(D_\beta \Phi)^\dagger D^\mu \Phi] \\ O_{M,4} &= \left[(D_\mu \Phi)^\dagger \hat{W}_{\beta\nu} D^\mu \Phi \right] \times \hat{B}^{\beta\nu} \\ O_{M,5} &= \frac{1}{2} \left[(D_\mu \Phi)^\dagger \hat{W}_{\beta\nu} D^\nu \Phi \right] \times \hat{B}^{\beta\mu} + h.c. \\ O_{M,7} &= \left[(D_\mu \Phi)^\dagger \hat{W}_{\beta\nu} \hat{W}^{\beta\mu} D^\nu \Phi \right] \end{aligned}$$

Mixed

$$\begin{aligned} O_{T,0} &= \text{Tr} \left[\hat{W}_{\mu\nu} \hat{W}^{\mu\nu} \right] \times \text{Tr} \left[\hat{W}_{\alpha\beta} \hat{W}^{\alpha\beta} \right] \\ O_{T,1} &= \text{Tr} \left[\hat{W}_{\alpha\nu} \hat{W}^{\mu\beta} \right] \times \text{Tr} \left[\hat{W}_{\mu\beta} \hat{W}^{\alpha\nu} \right] \\ O_{T,2} &= \text{Tr} \left[\hat{W}_{\alpha\mu} \hat{W}^{\mu\beta} \right] \times \text{Tr} \left[\hat{W}_{\beta\nu} \hat{W}^{\nu\alpha} \right] \\ O_{T,5} &= \text{Tr} \left[\hat{W}_{\mu\nu} \hat{W}^{\mu\nu} \right] \times \hat{B}_{\alpha\beta} \hat{B}^{\alpha\beta} \\ O_{T,6} &= \text{Tr} \left[\hat{W}_{\alpha\nu} \hat{W}^{\mu\beta} \right] \times \hat{B}_{\mu\beta} \hat{B}^{\alpha\nu} \\ O_{T,7} &= \text{Tr} \left[\hat{W}_{\alpha\mu} \hat{W}^{\mu\beta} \right] \times \hat{B}_{\beta\nu} \hat{B}^{\nu\alpha} \\ O_{T,8} &= \hat{B}_{\mu\nu} \hat{B}^{\mu\nu} \times \hat{B}_{\alpha\beta} \hat{B}^{\alpha\beta} \\ O_{T,9} &= \hat{B}_{\alpha\mu} \hat{B}^{\mu\beta} \times \hat{B}_{\beta\nu} \hat{B}^{\nu\alpha}, \end{aligned}$$

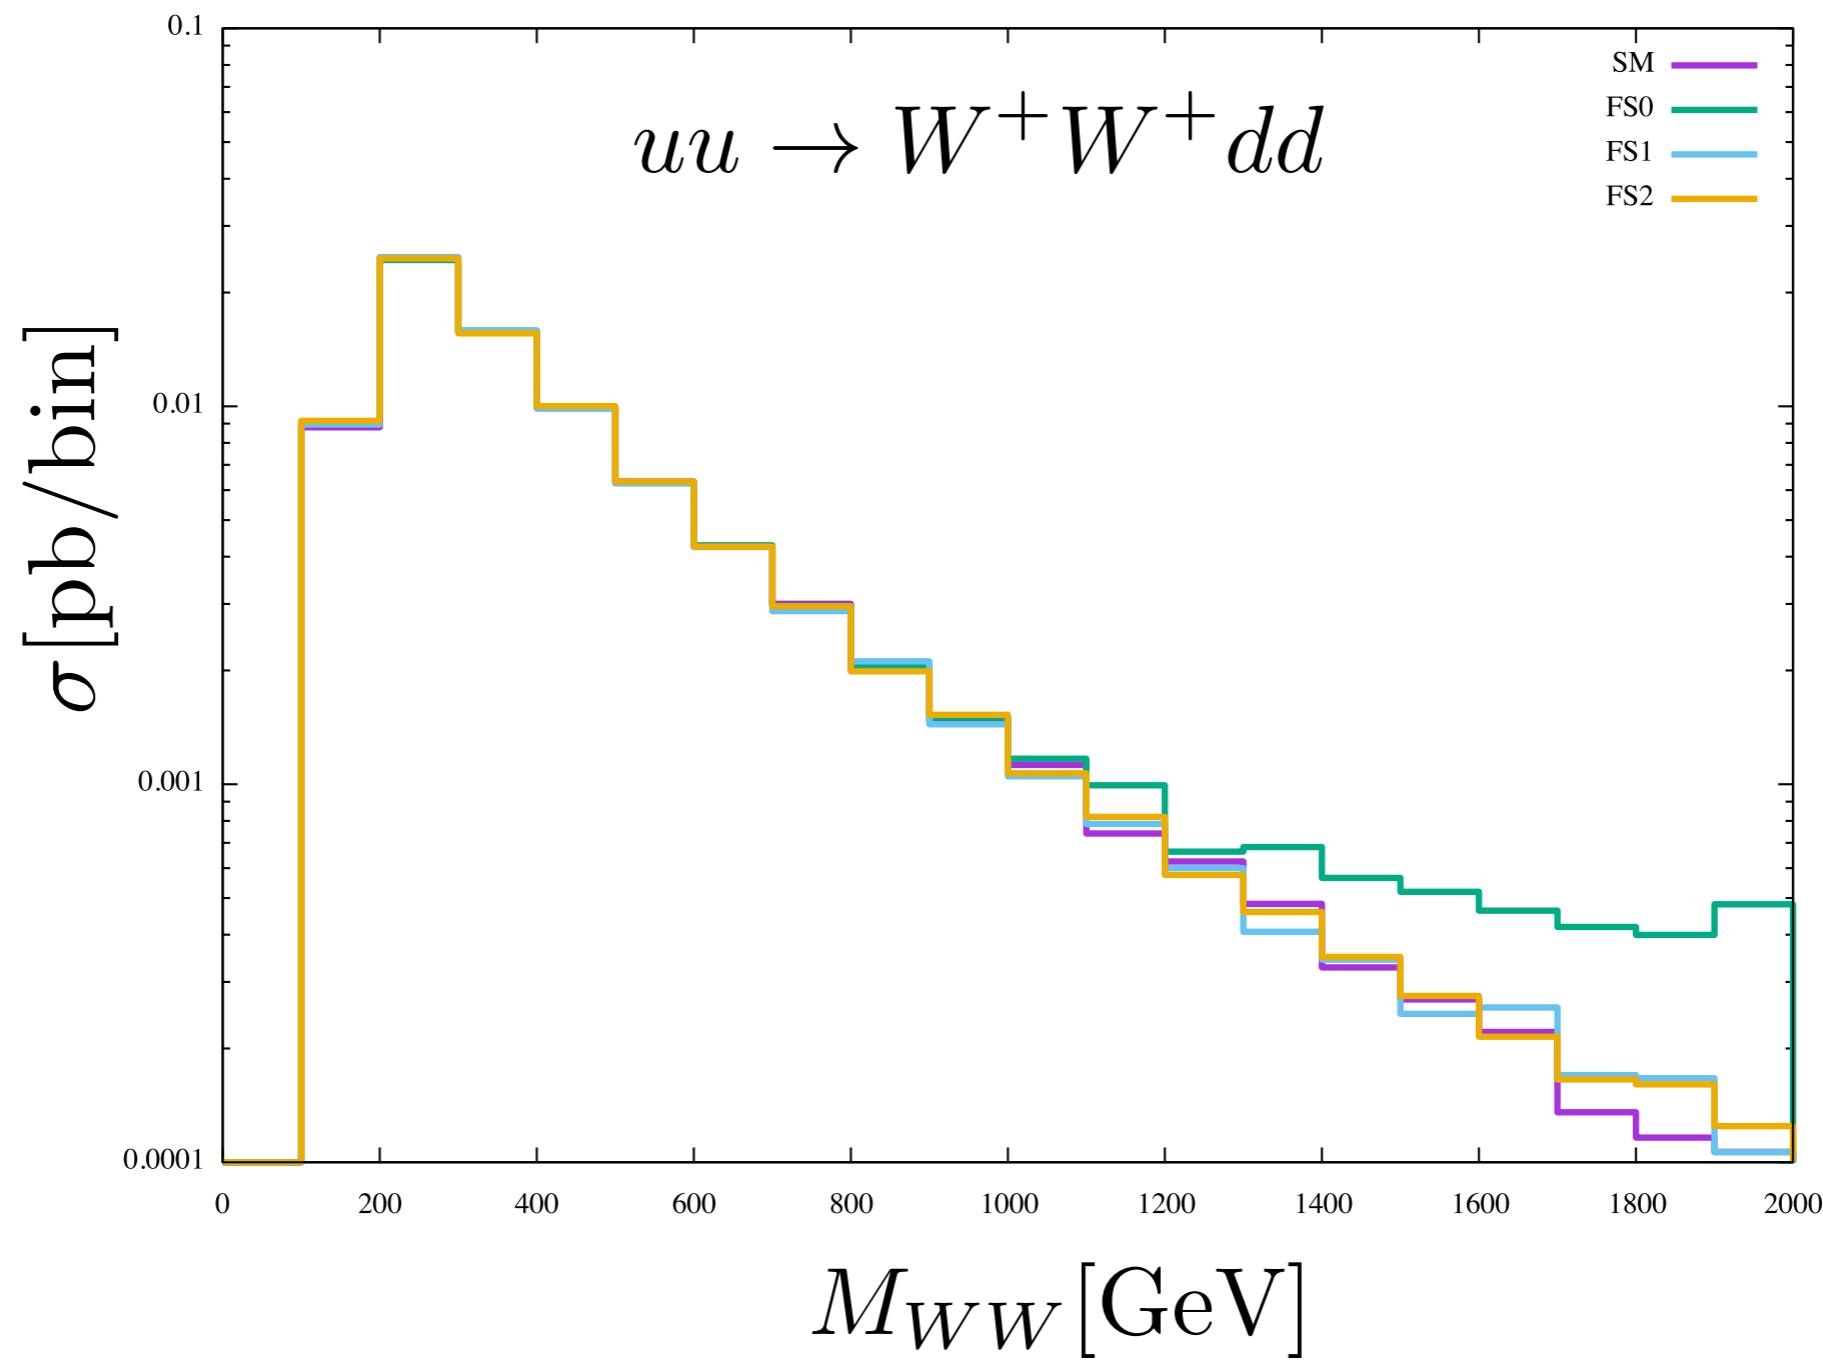

Transverse

How do these operators change the VBS process:

	WWWW	WWZZ	ZZZZ	WWAZ	WWAA	ZZZA	ZZAA	ZAAA	AAAA
$\mathcal{O}_{S,0/1}$	✓	✓	✓						
$\mathcal{O}_{M,0/1/6/7}$	✓	✓	✓	✓	✓	✓	✓		
$\mathcal{O}_{M,2/3/4/5}$		✓	✓	✓	✓	✓	✓

$\mathcal{O}_{T,5/6/7}$		✓	✓	✓	✓	✓	✓	✓	✓
$\mathcal{O}_{T,8/9}$			✓			✓	✓	✓	✓

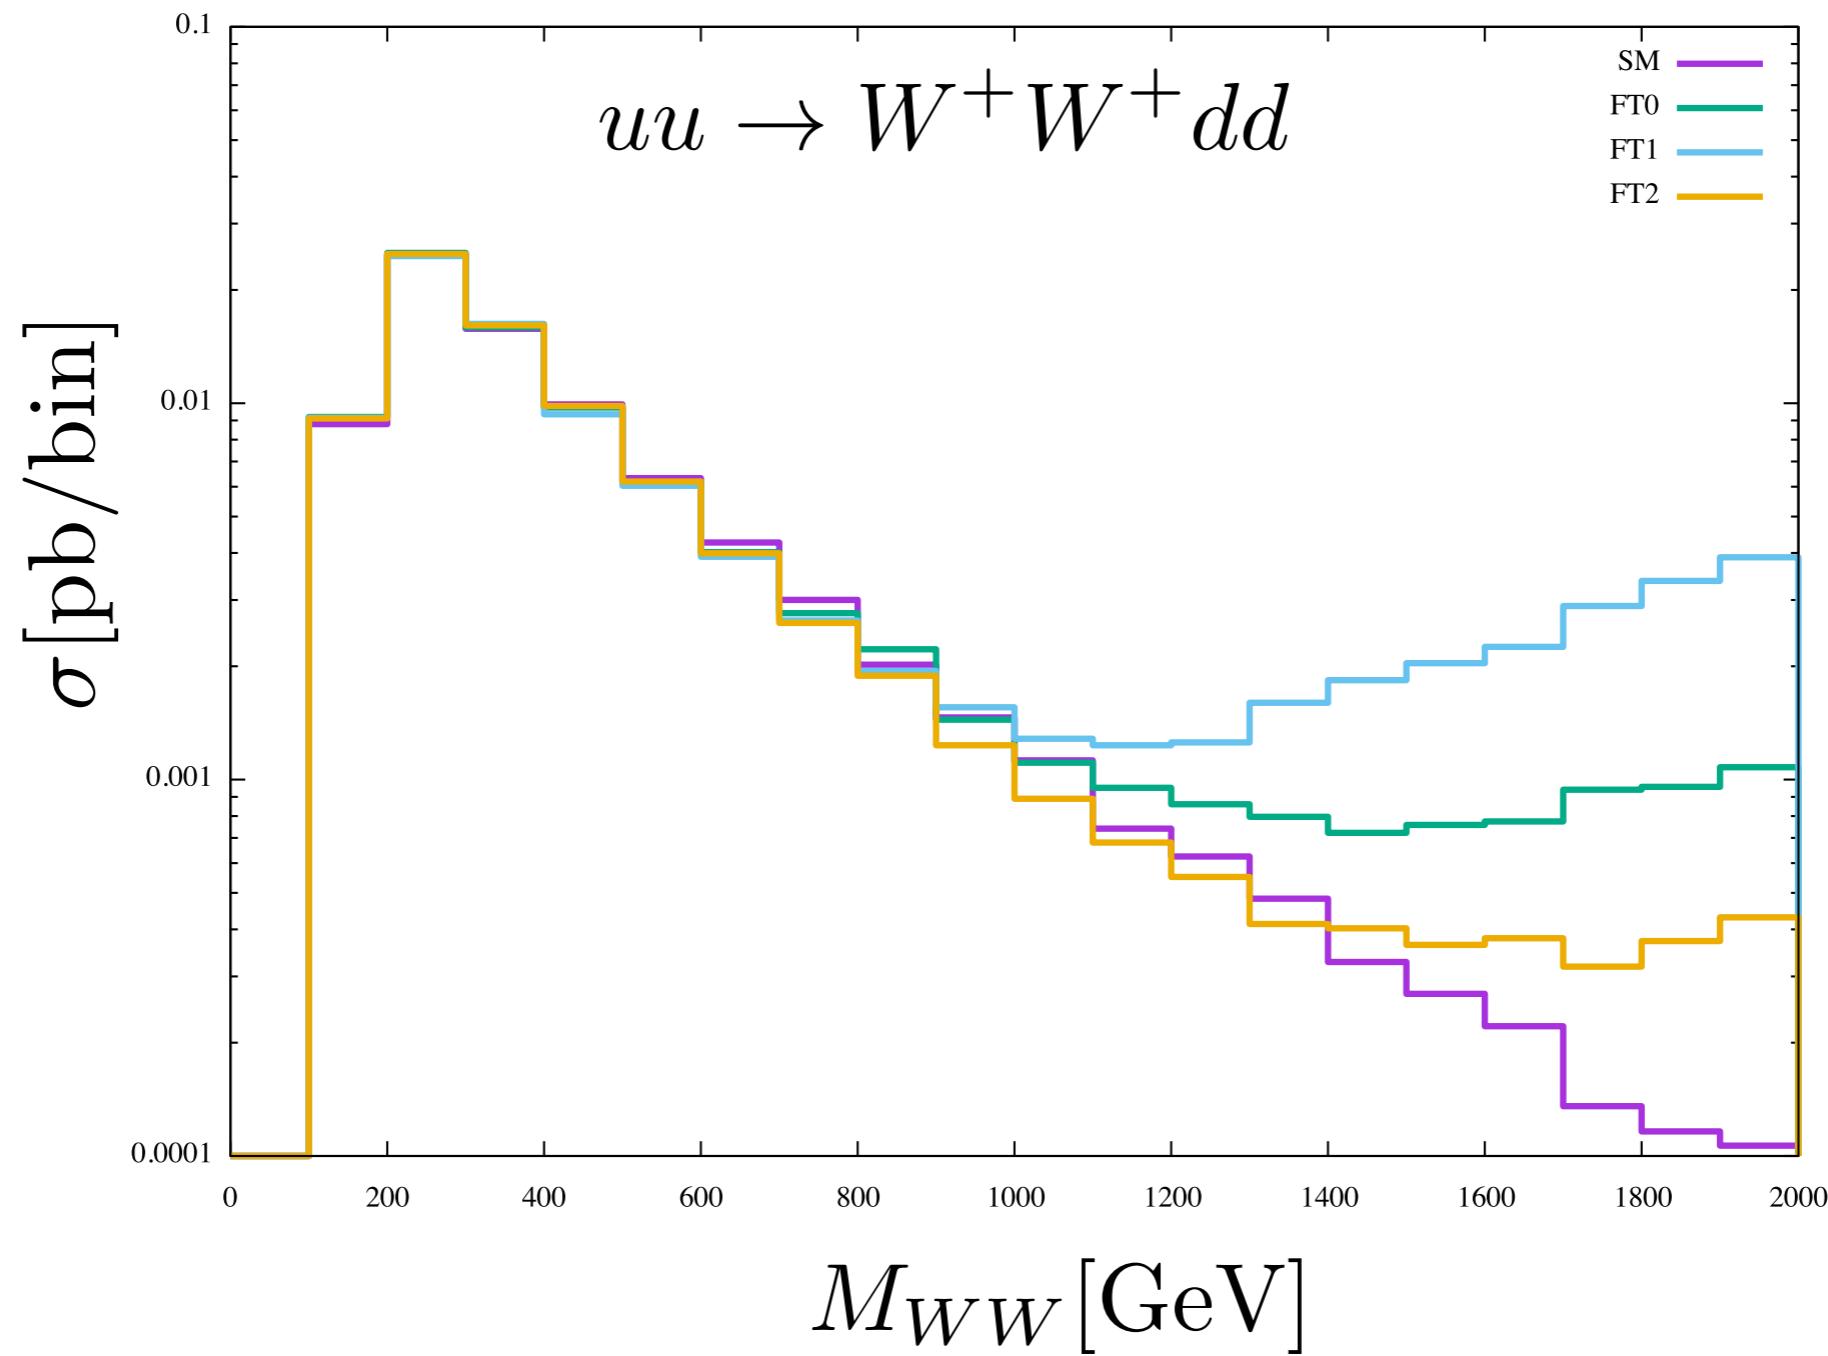

Example: same sign W

Distributions for dim-8: Longitudinal operators

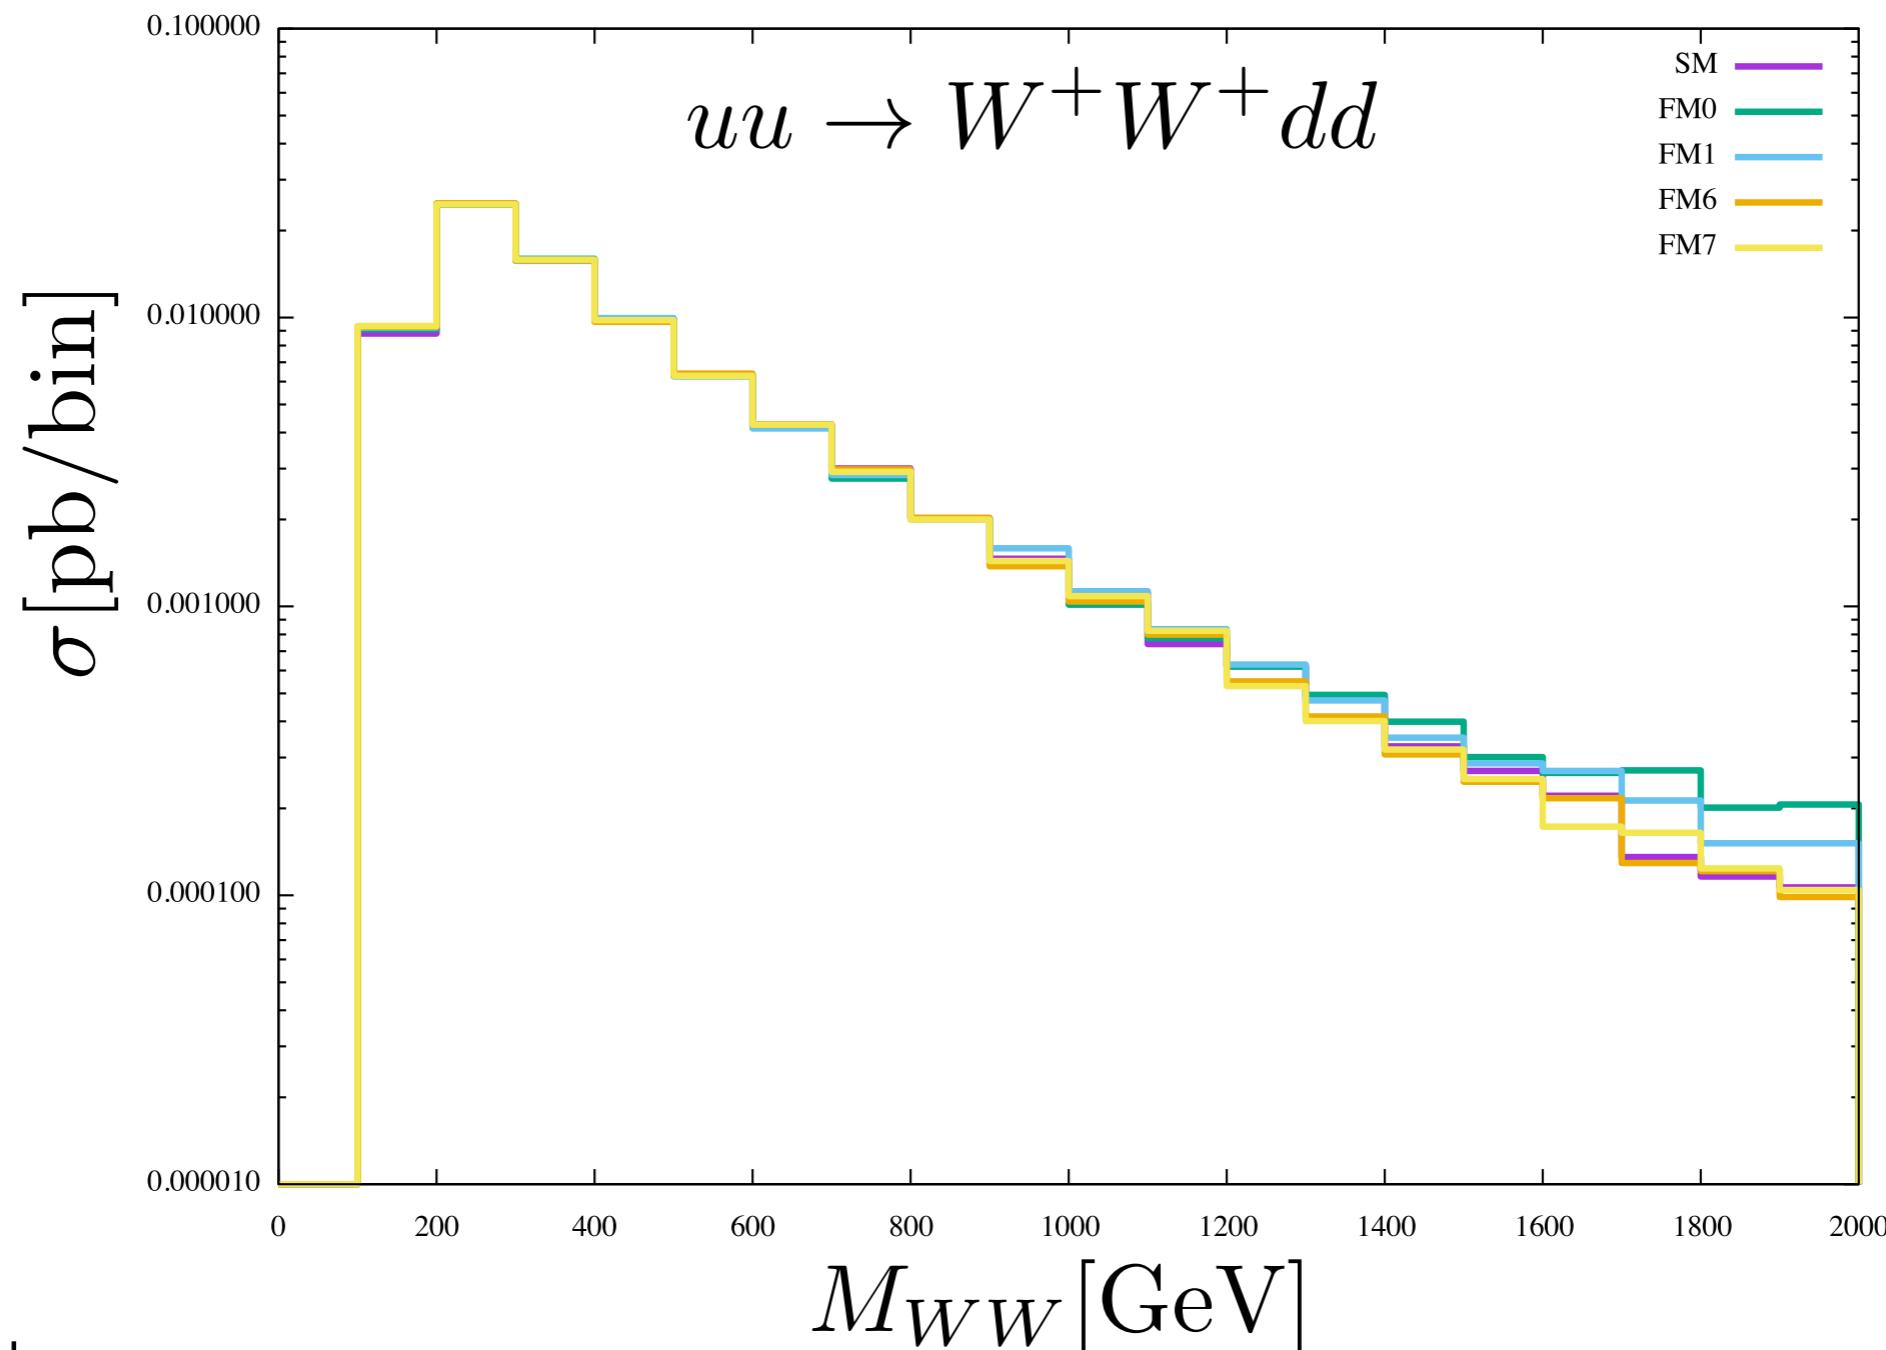

Example: same sign W

Distributions for dim-8: Transverse operators

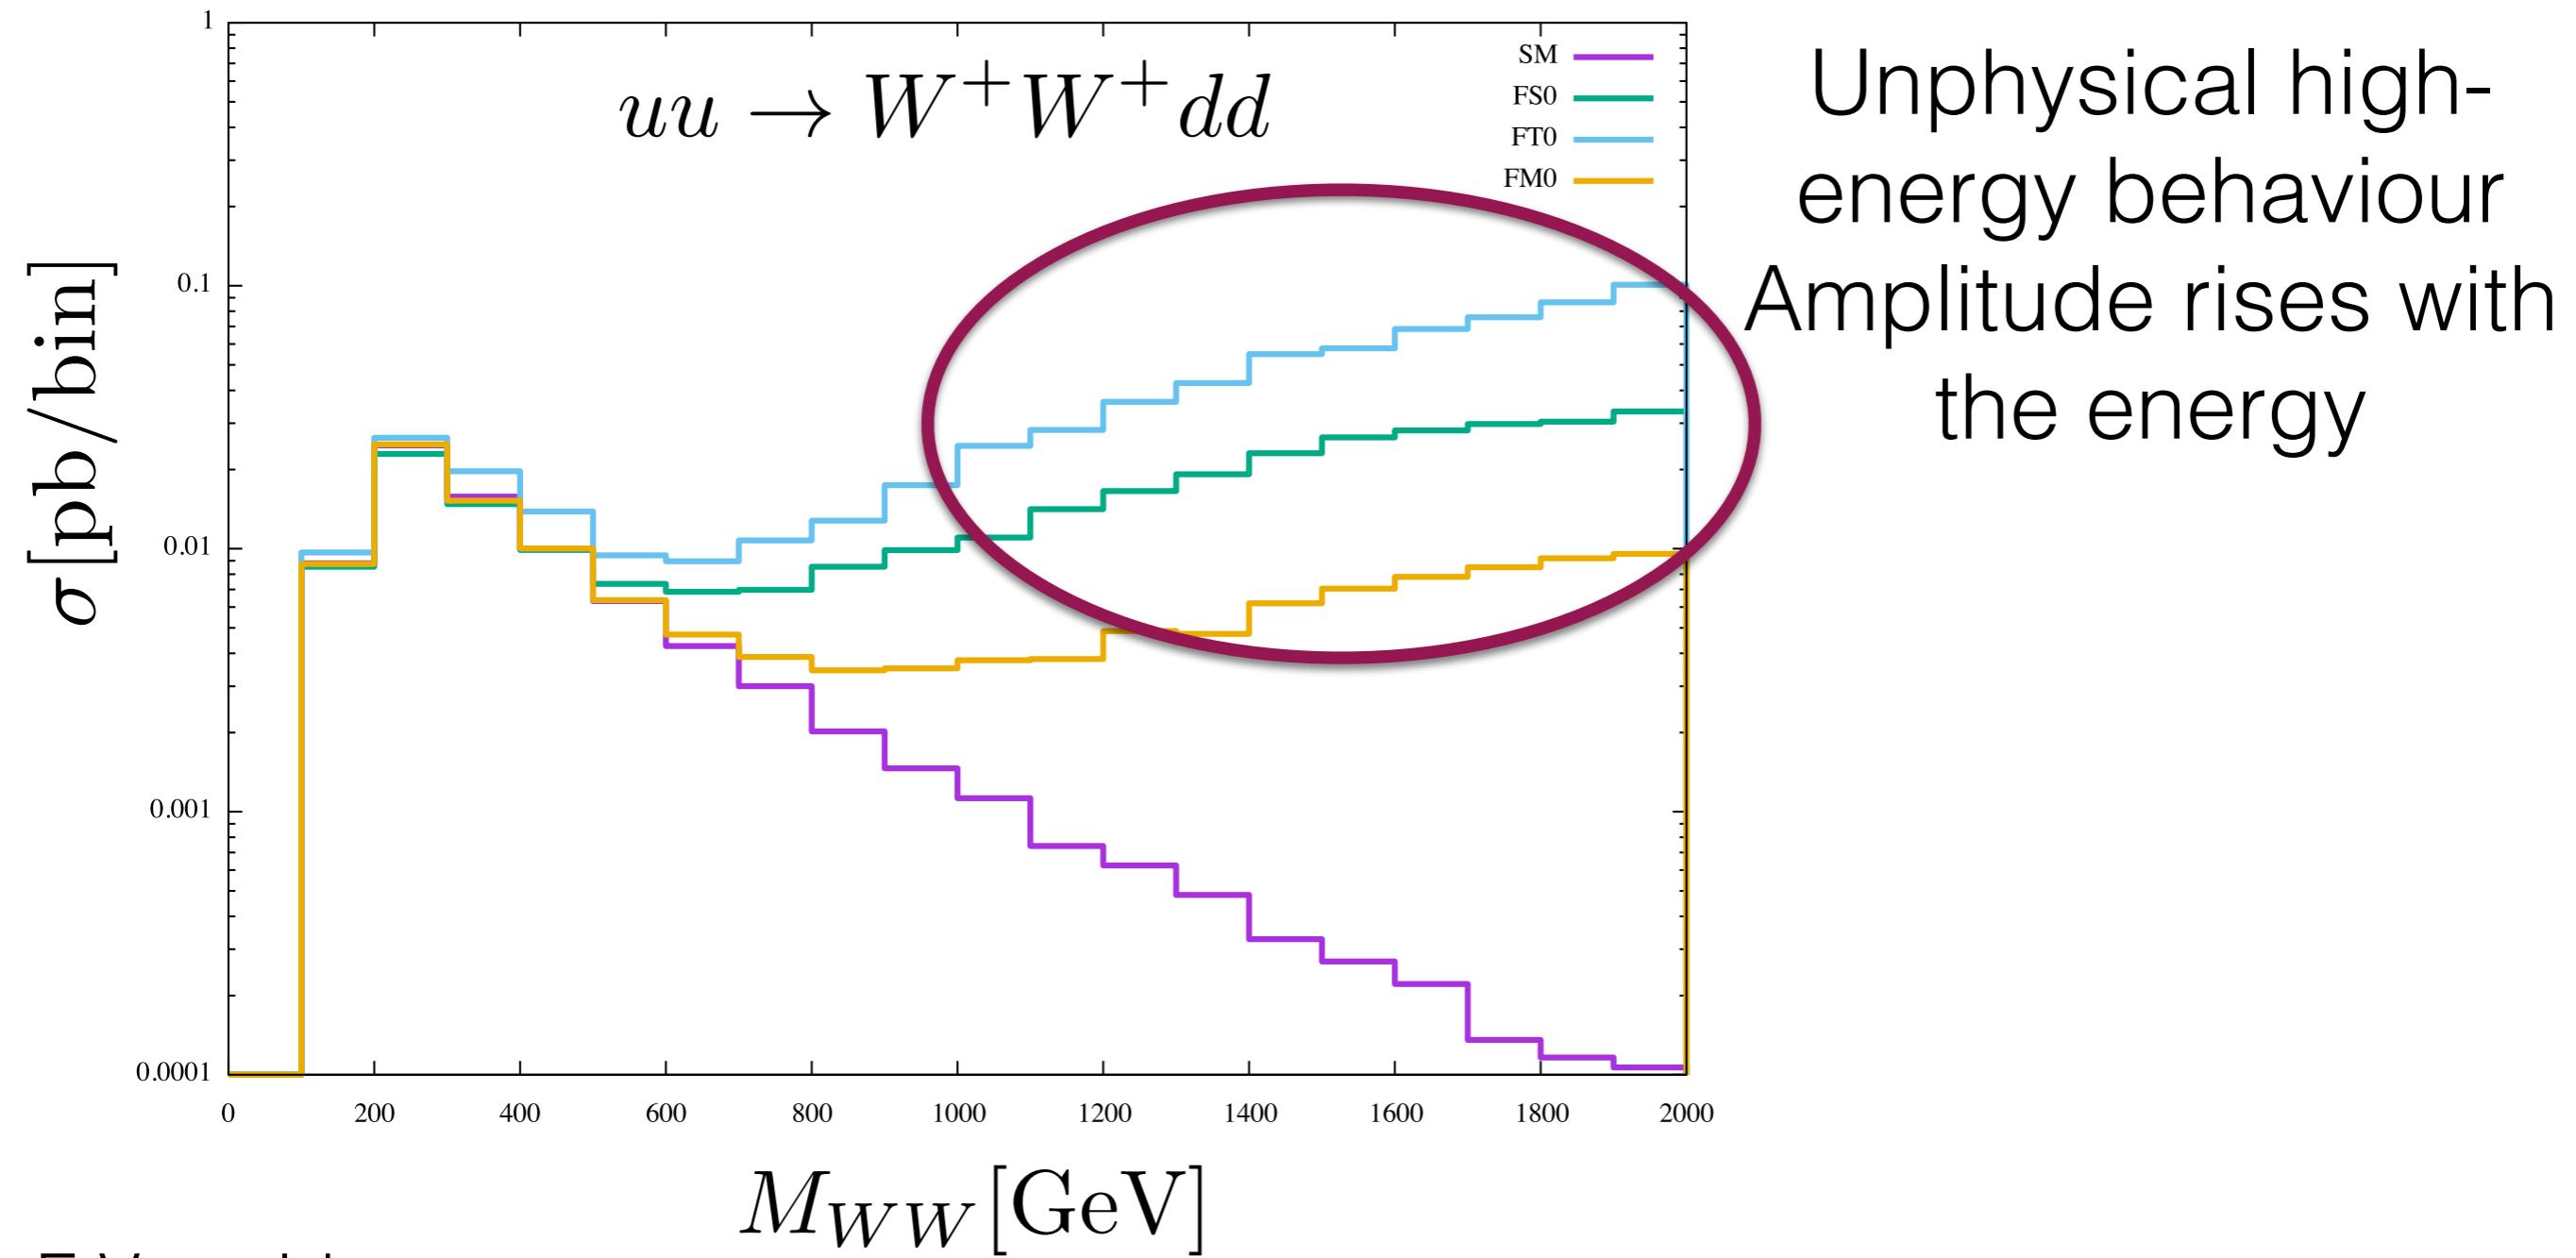

Example: same sign W

Distributions for dim-8: Mixed operators

What happens for larger values of the coefficients?

Unitarity

The special role of the Higgs:

The diagram shows two Feynman diagrams representing different contributions to a process. The left diagram consists of two terms separated by a plus sign. Each term shows a horizontal line with a wavy propagator (labeled 'W') interacting with a vertical line. The first term is labeled with a blue 'W' at the top and bottom vertices. The second term is labeled with a blue 'Z, γ' at the top vertex. The right diagram also consists of two terms separated by a plus sign. It shows a similar interaction but includes a Higgs boson exchange (represented by a dashed line labeled 'H') between the two W bosons. A large blue arrow points from the left side to the right side, indicating a transformation or consequence.

$$a_0 \sim \frac{E^2}{v^2}$$

amplitude
growing with energy

$$a_0 \sim \frac{E^2}{v^2} - \frac{E^2}{v^2} \sim \frac{m_H^2}{v^2}$$

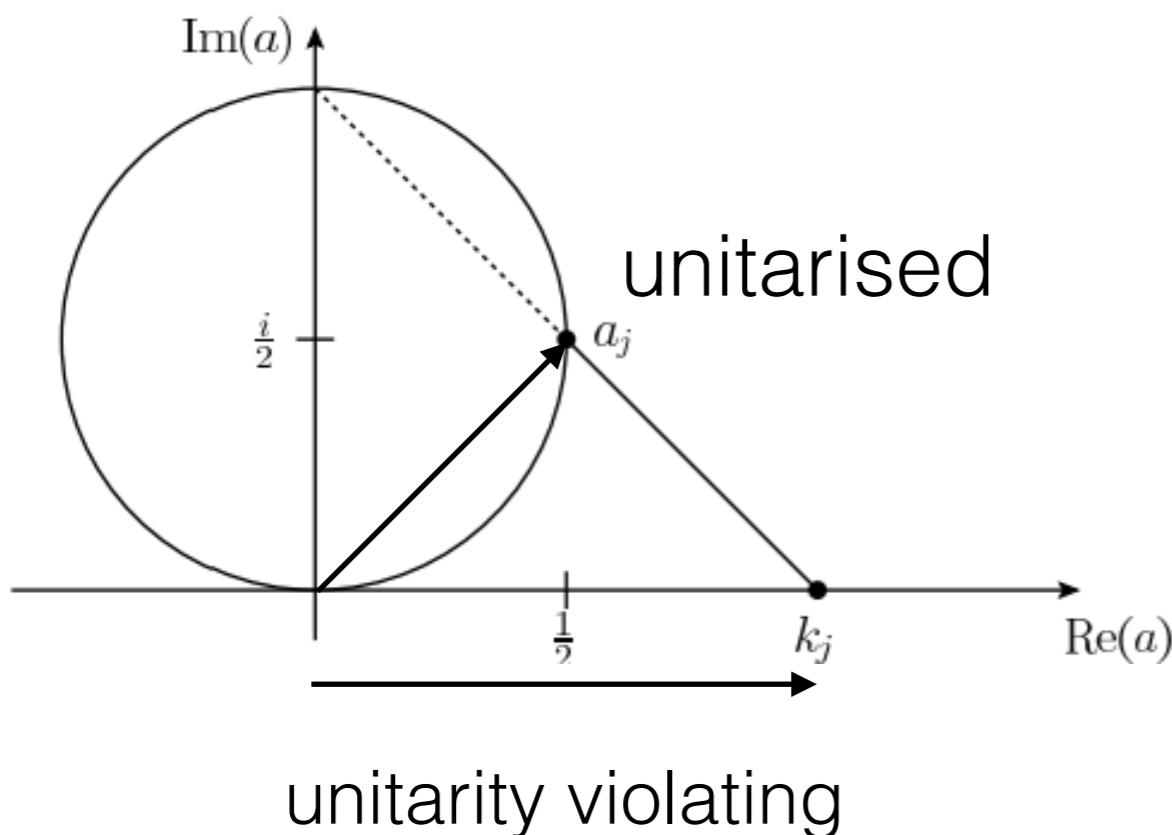

Probability < 1 ✓

Amplitude in the SM is finite (due to Higgs exchange)
Modification of the TGC and QGC can lead to unitarity
violating behaviour

What can we do about this?

- 1) EFT interpretation not valid: Apply a hard energy cut above which the EFT interpretation is not meaningful
- 2) Use unitarisation to enforce unitarity for the amplitudes

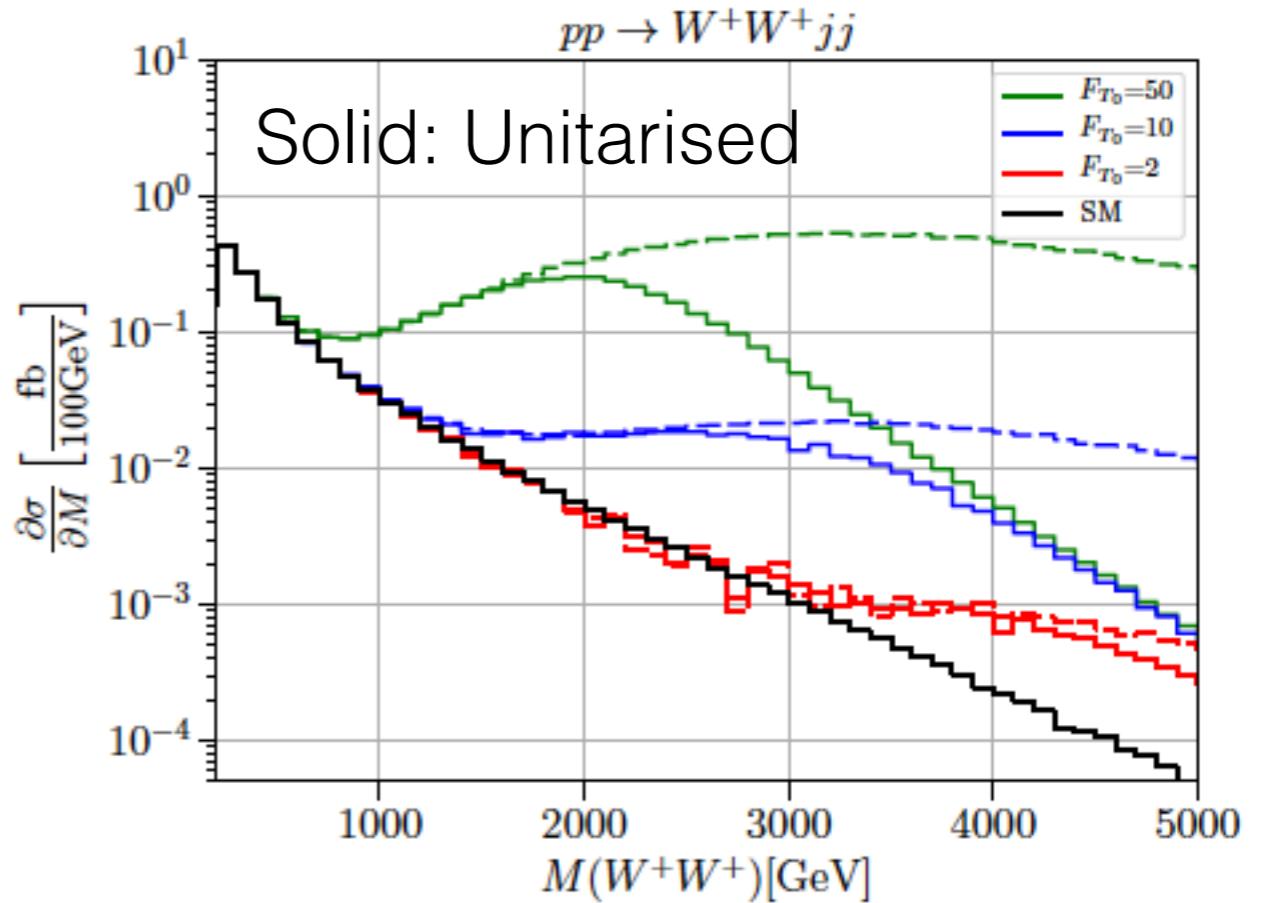

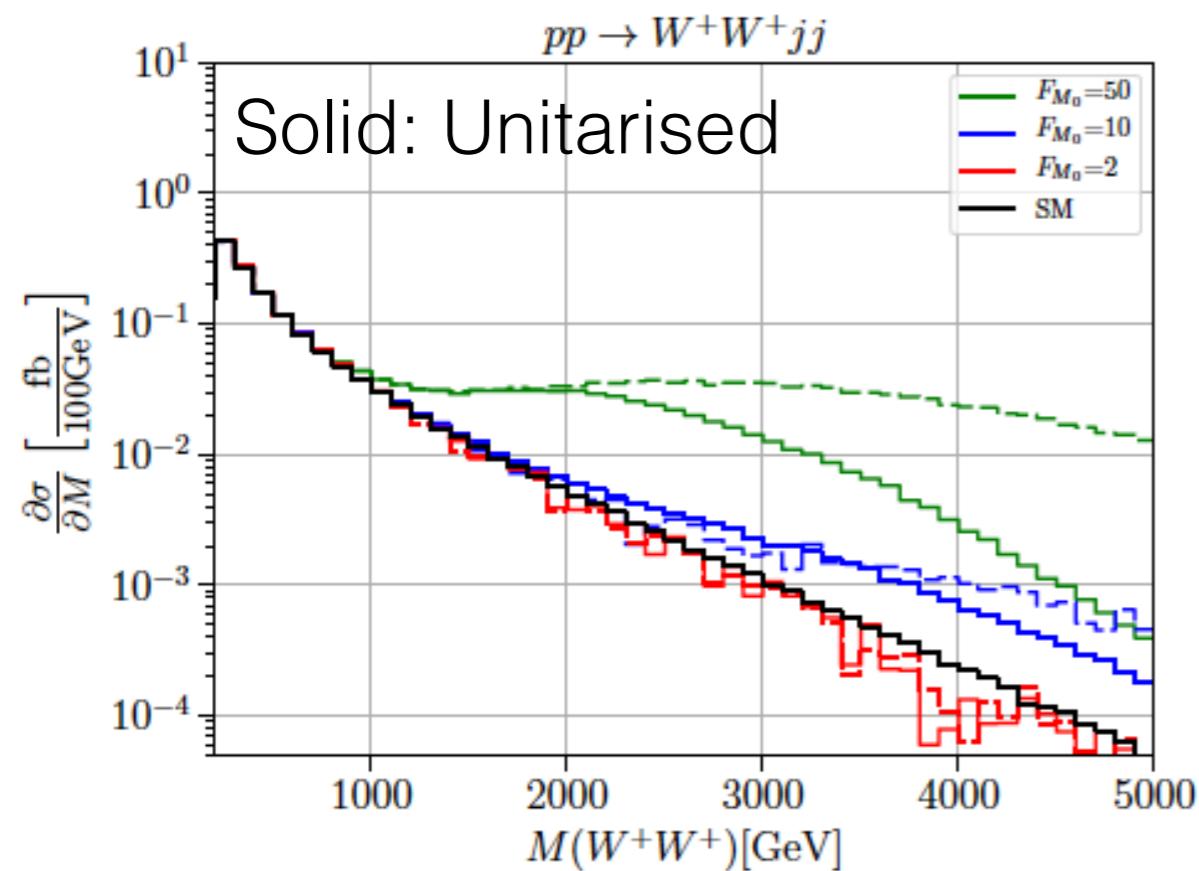

A simple example: K-matrix Unitarisation

One can project the unitarity-violating amplitude back to the Argand circle

Various unitarisation methods:
Alboteanu et al arXiv:0806.4145
Kilian et al arXiv:1408.6207
Perez et al arXiv:1807.02707

Does unitarisation work?

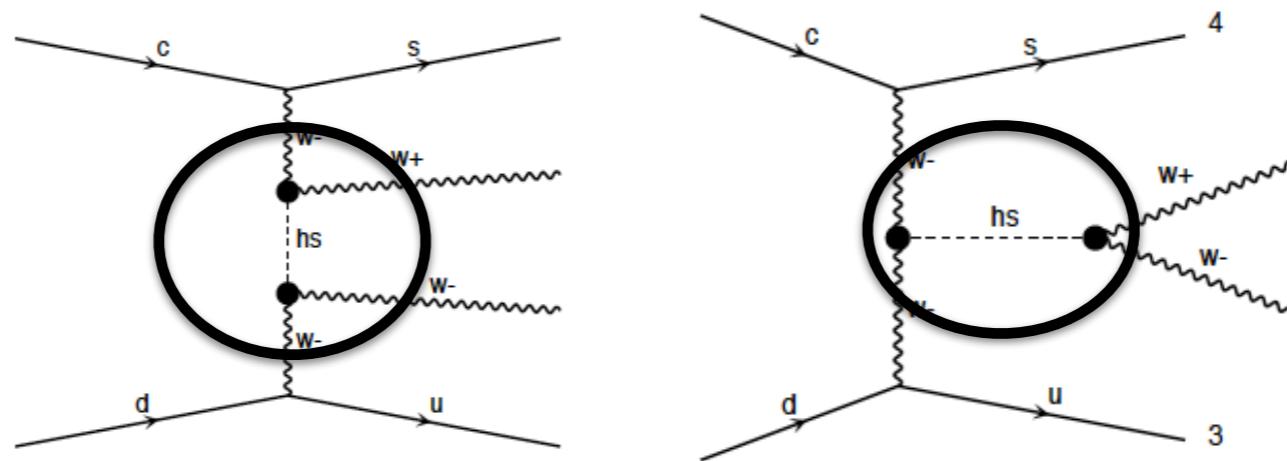

Brass et al arXiv:1807.02512

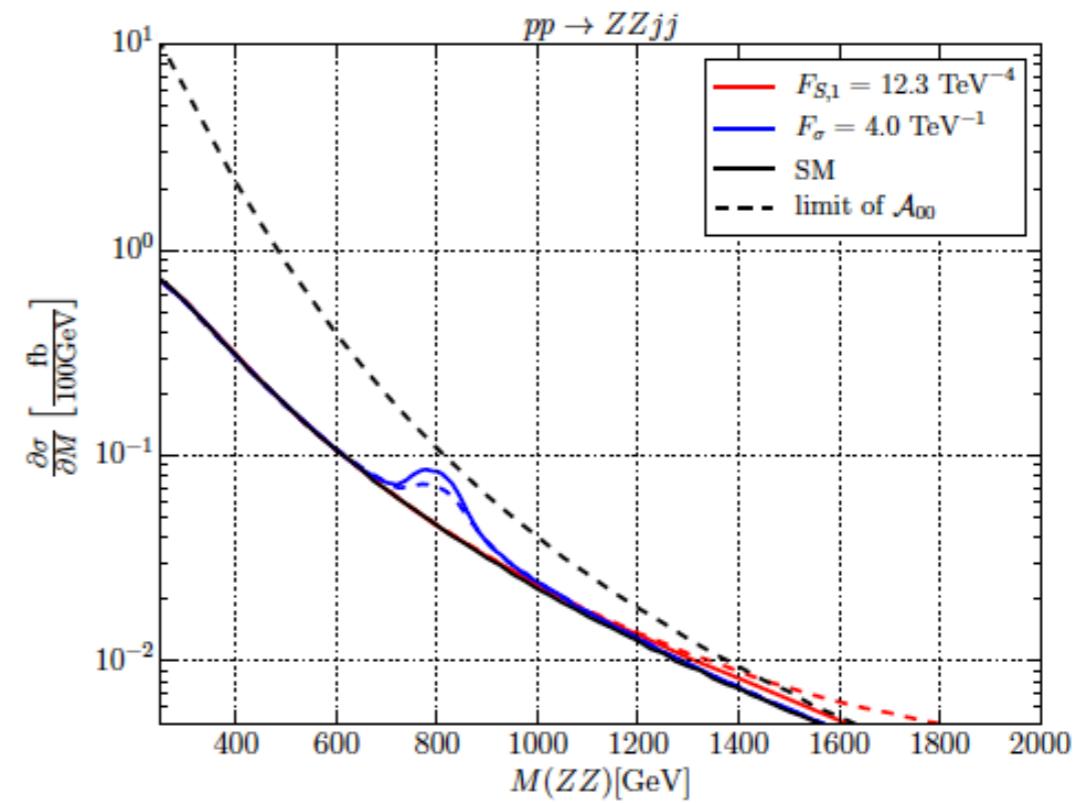

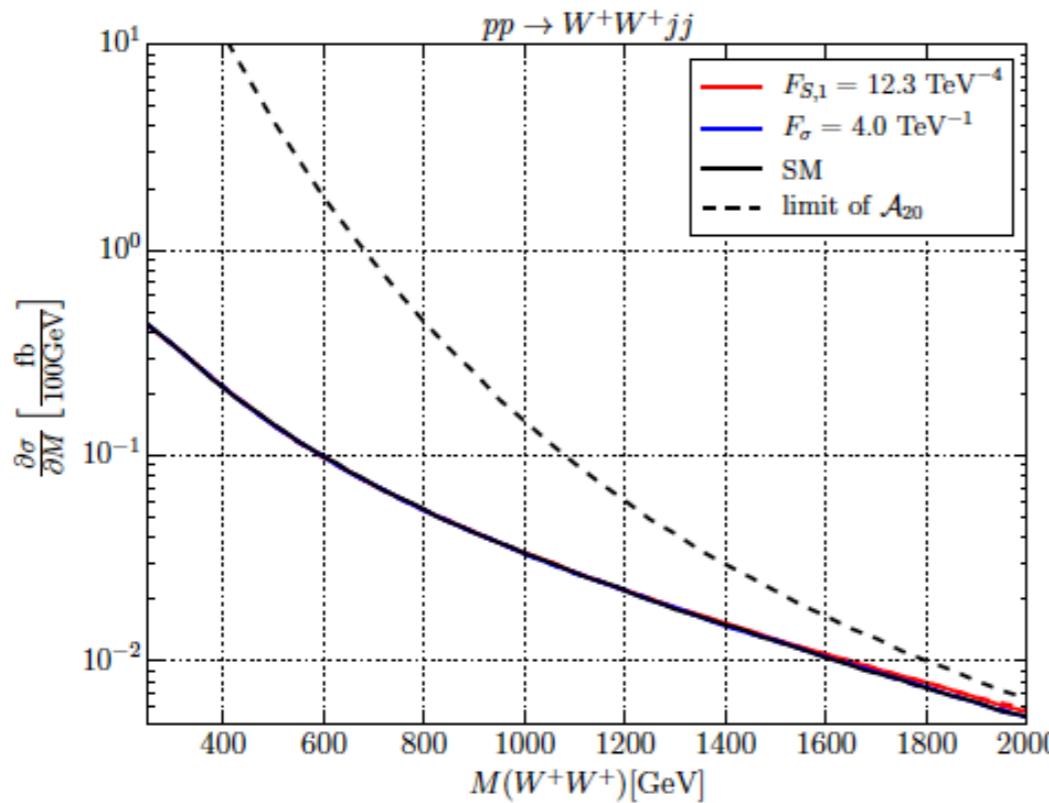

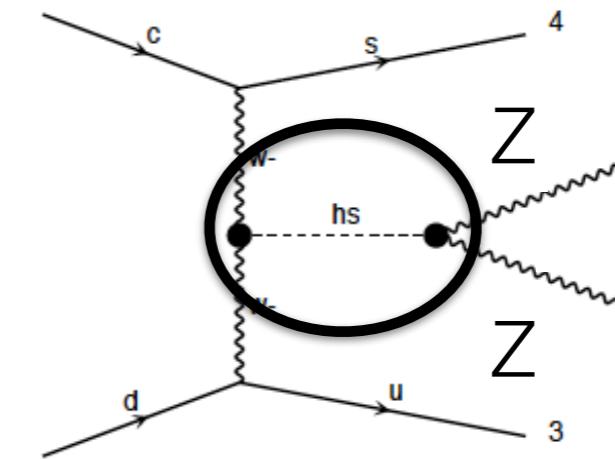

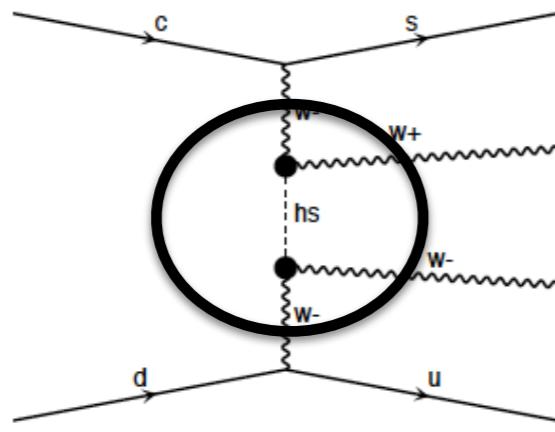

Unitarisation cures the unphysical predictions in the high energy region but it is not straightforward to connect any EFT interpretation of the results to UV physics

EFT or Resonances in VBS?

- EFT applies in the absence of light states
- Any model with resonances coupling to gauge bosons will affect VBS
- Depending on the channel the resonance will be in the s-channel, t-channel or both:

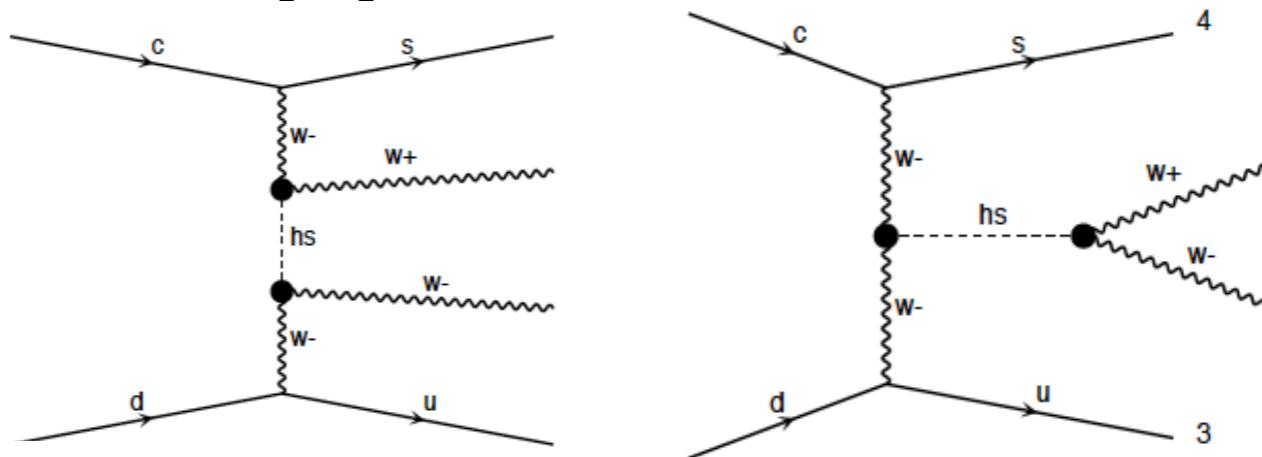

EFT or Resonances in VBS?

Matching example

A scalar resonance:

$$\mathcal{L}_{kin} = \frac{1}{2} D_\mu S D^\mu S - \frac{1}{2} M_S^2 S^2 \quad \mathcal{L}_{int} = S \mathcal{J}_S$$

$$\mathcal{J}_S = a_H (D_\mu \phi)^\dagger D^\mu \phi + a_W W_{\mu\nu}^i W^{i\mu\nu} + a_B B_{\mu\nu} B^{\mu\nu}$$

If $M \gg E$ we can match

Matching conditions

$$F_{S,1} = \frac{a_H^2}{2M_S^2} \Lambda^4$$

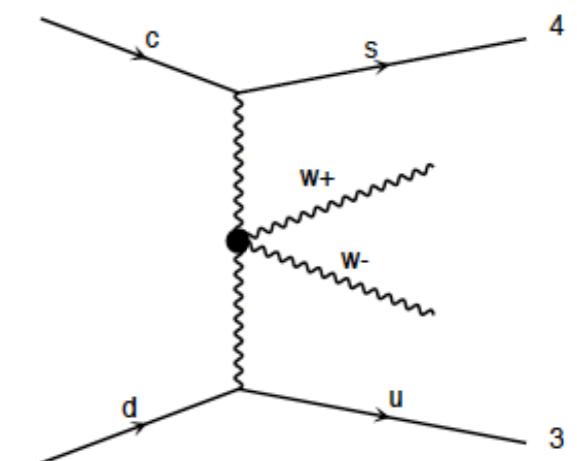

$$F_{T,0} = \frac{\bar{a}_W^2}{2M_S^2} \Lambda^4$$

$$F_{T,5} = \frac{\bar{a}_W \bar{a}_B}{M_S^2} \Lambda^4$$

$$F_{T,8} = \frac{\bar{a}_B^2}{2M_S^2} \Lambda^4$$

$$F_{M,0} = \frac{a_H \bar{a}_W}{M_S^2} \Lambda^4$$

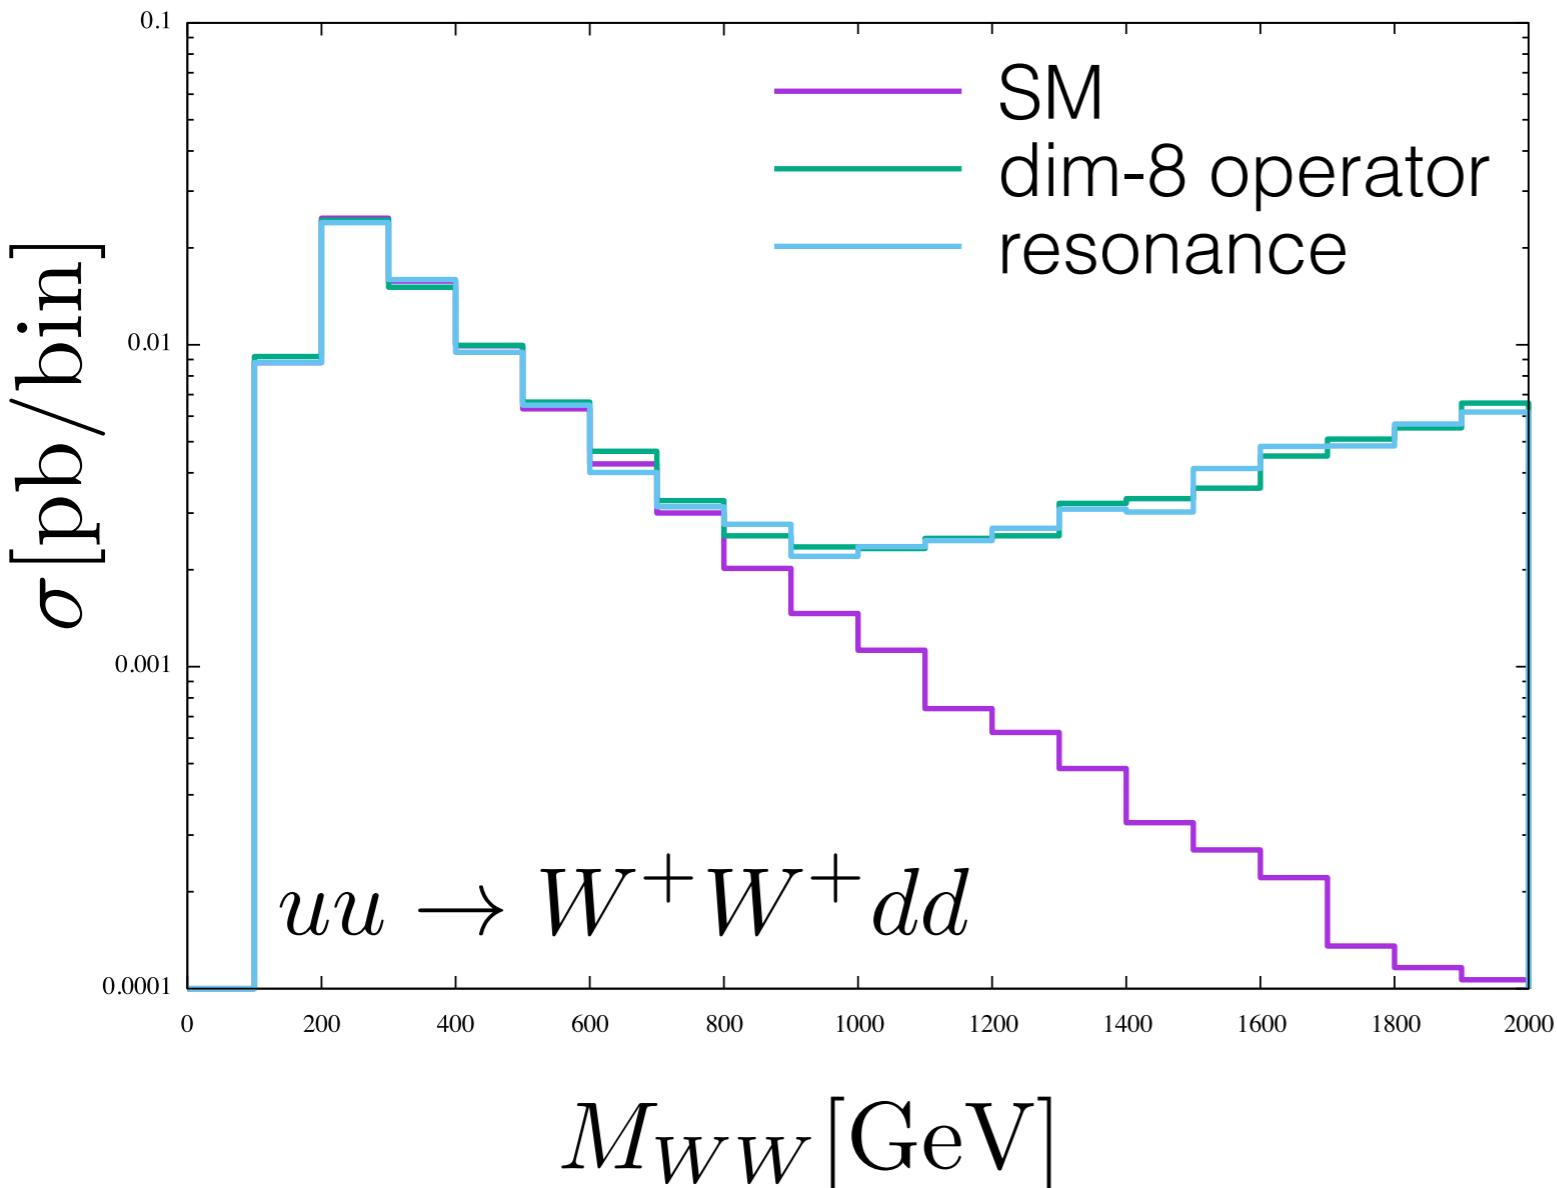

$$F_{M,2} = \frac{a_H \bar{a}_B}{M_S^2} \Lambda^4$$

$$\bar{a}_W = -2g^{-2}a_W$$

$$\bar{a}_B = -4g'^{-2}a_B$$

Does the EFT work?

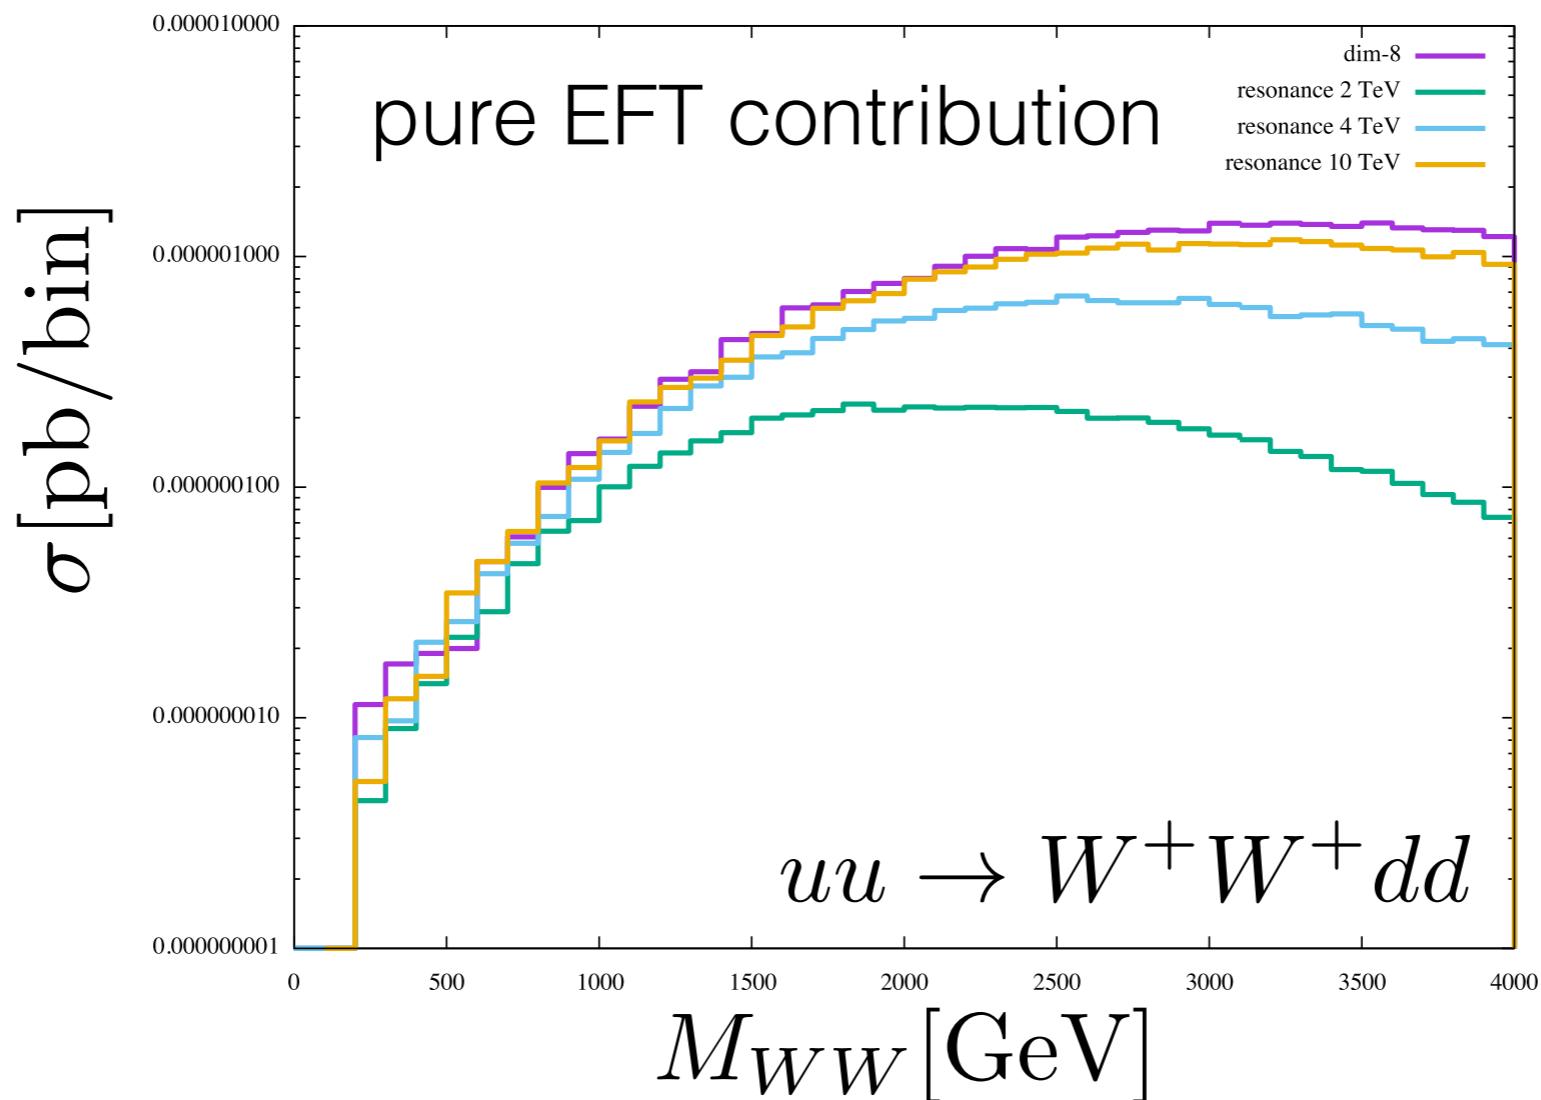

Resonance mass: 20 TeV
Energy probed << 20 TeV
EFT description is valid

Good agreement between
EFT and resonance plots

When does the EFT fail?

For light resonances the EFT is not reliable
As we approach the mass of the resonance the EFT becomes unreliable

Thank you for your attention
