

ALICE

H1PEX
Heavy Ion Physics Experiment

Annual Status Update:

$\Xi(1530)^0$ @ pp 13 TeV

Bong-Hwi Lim
Pusan National University

Overview

- **Moved to CERN(Main stay)**

- from 2018-05, 7 months (on going)

- **Central Shifter in RC**

- **DCS shift (5 blocks)**

- 2018-06-05 ~ 10
 - 2018-06-23 ~ 28
 - 2018-07-03 ~ 08
 - 2018-07-11 ~ 16
 - 2018-12-02 ~ 03 (**Expert**) ← Run2 final shift

- **Shift leader (2 blocks)**

- 2018-10-17 ~ 22
 - 2018-10-31 ~ 11-05 (**Expert**)

- **Main topic:** ITS Upgrade project → ALICE Data Analysis(PWG-LF)

ID: 609753
Source: Bong-Hwi Lim

Subsystems: Central DCS
Class: HUMAN
Type: EOS
Run: None

DCS EOS Morning Report

Operator Name: Bong-Hwi Lim
Trainee Name:
Status at the beginning of the shift:
Magnet : both off
LHC status: SHUTDOWN: NO BEAM
ALICE status: ALL DOWN
Locks owned: ALL in Central DCS
Free locks: None
Detector status:
ACO: READY
AD0/CPV/EMC/FMD/SDD/SSD/T00/V00: OFF
HMP/MCH/PMD: STBY_CO
MTR/TRD: MIXED
SPD/TOF/ZDC: BEAM_TU

News from previous shift:
04:43:10.602;...;trd_hv:Iseg/can/ra12cr3/ra12cr3ma05/ch03.Actual.ITripSt
at;trd_hv:_fwFatalAck.
05:08:12.909;...;t00_dcs:wrongConfiguration.value;t00_dcs:_fwErrorAck.
TRD --> contacted to on-call
T00 --> can be ignored(due to the magnet off)

Shift flow:
07:00 Shift start
08:04 (SLIMOS) ALICE ACCESS MODE changed to AUTOMATIC

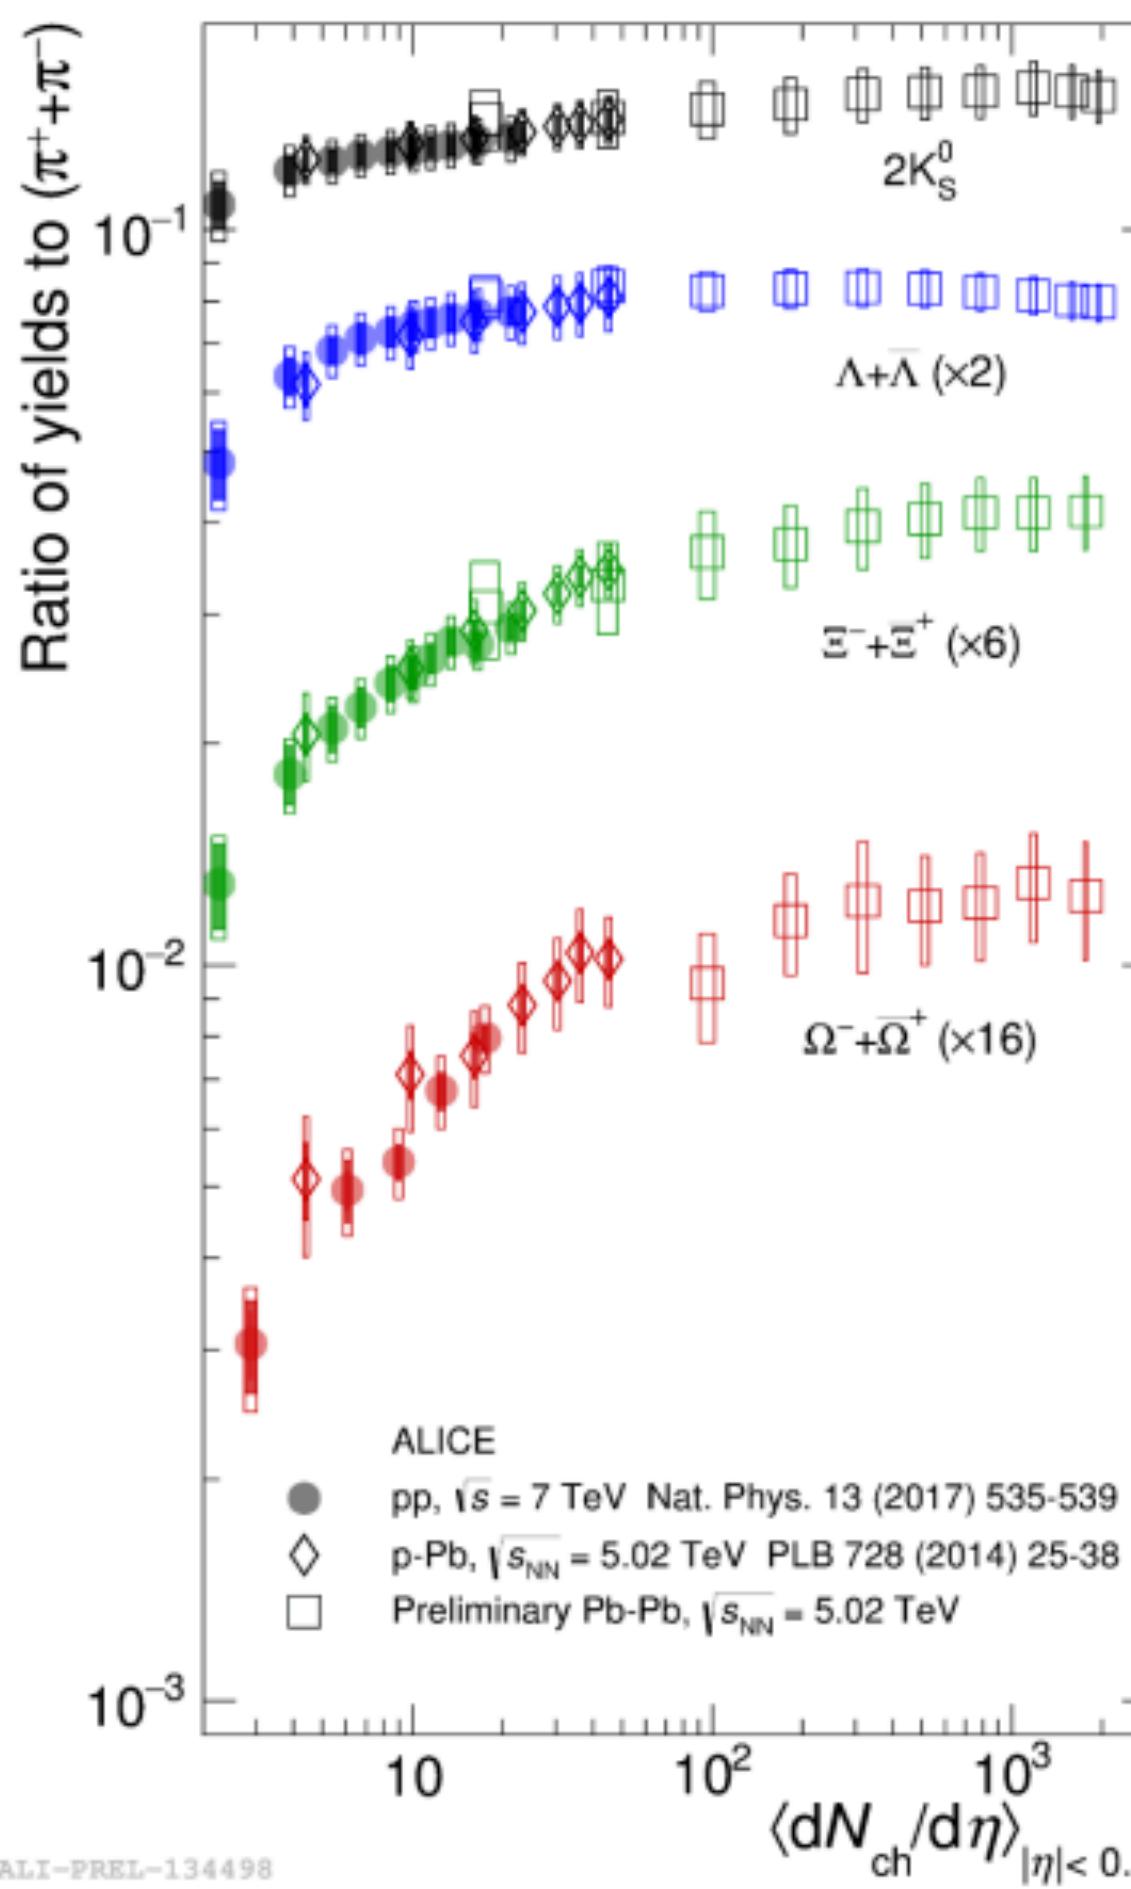

10:00 DCS intervention start
10:45 DCS intervention done
10:50 DCS shifter released ! Good bye :)

Alert Handlings:
none

:) See you next time!
***** END OF RUN2 *****

Multiplicity dependent Ξ^*0 Analysis

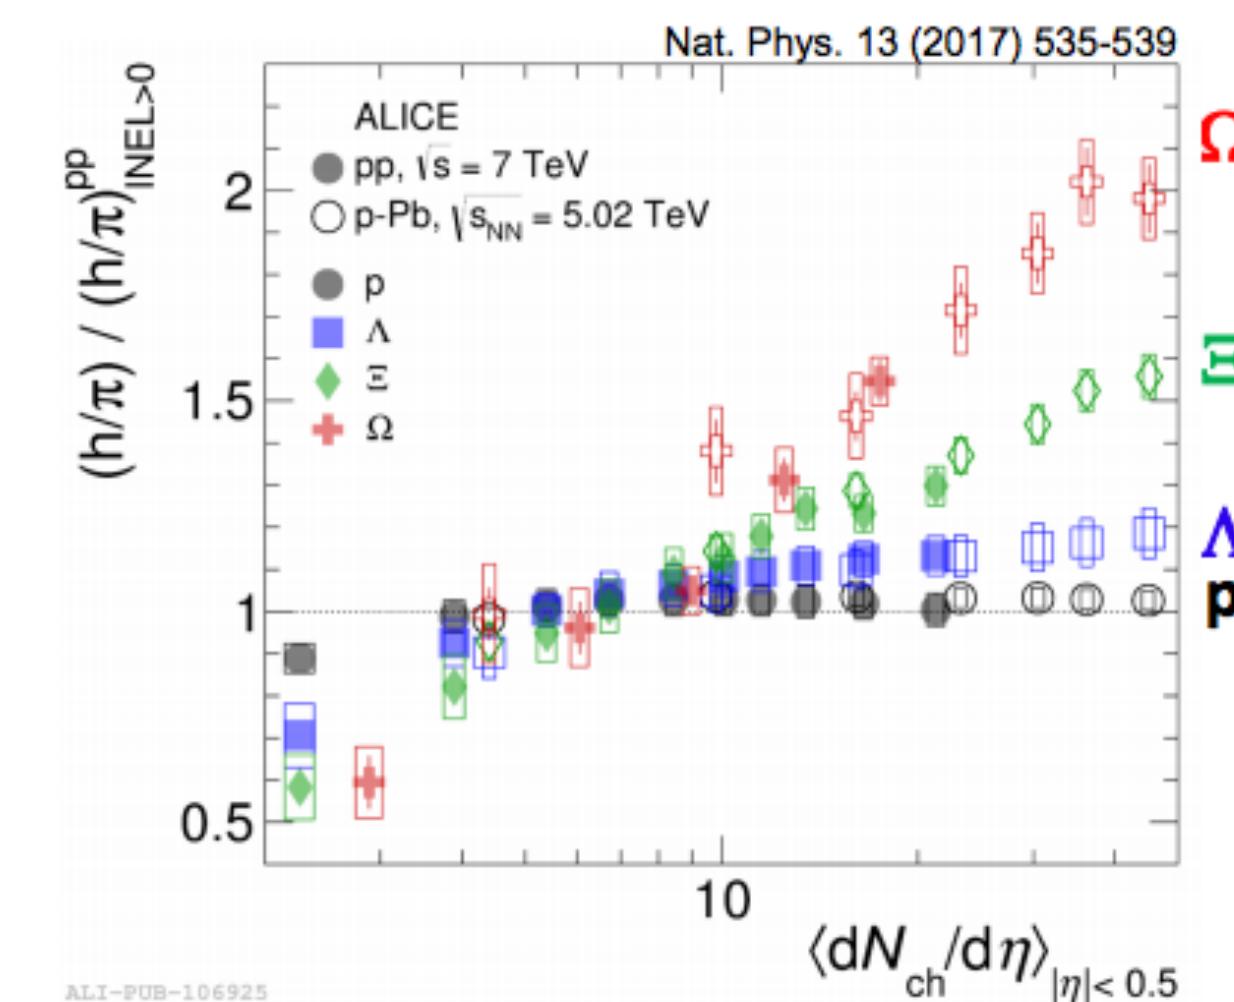

- High-multiplicity pp collision
- QPG droplet?

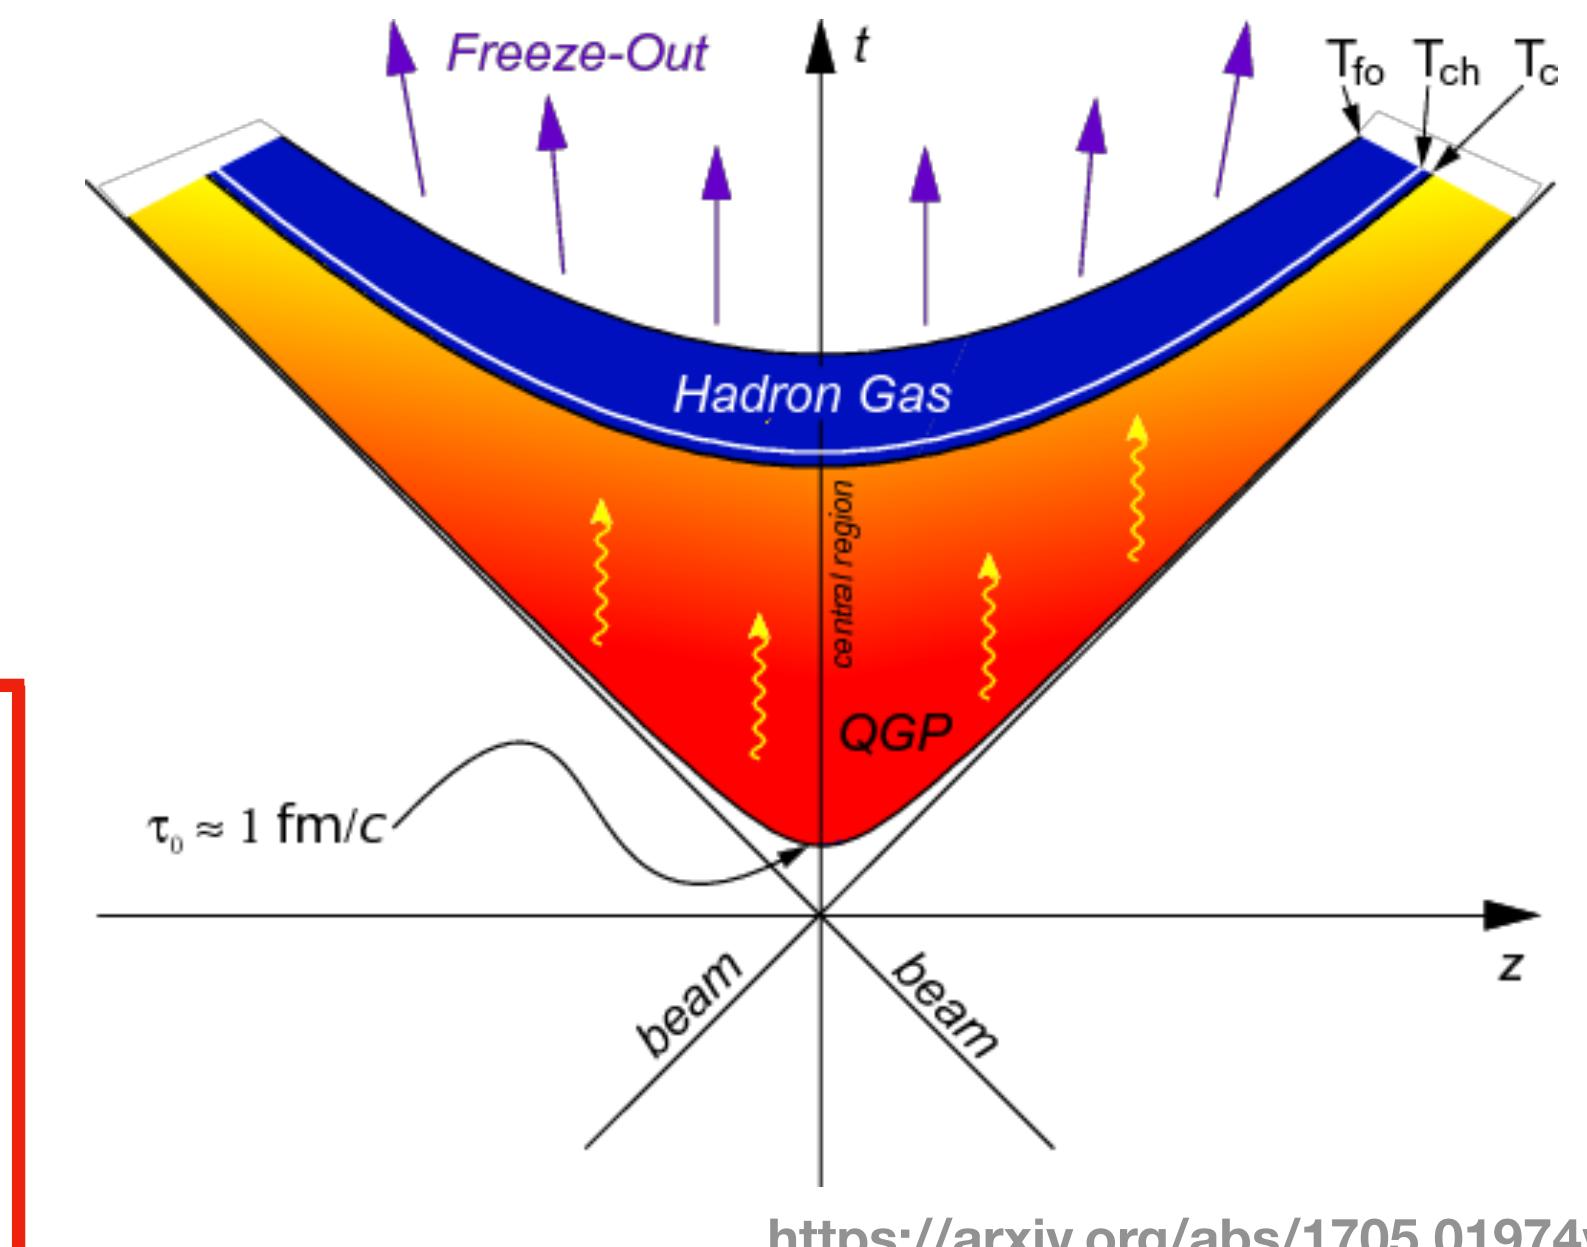

• PDG Mass: 1531.80 ± 0.32 MeV/c²
 • Quark contents: uss
 • Decay mode: $\Xi^*0 \rightarrow \Xi^- + \pi^+$
 • Hyperon(strange baryon)
 • Resonance Particle

• Ξ^0 Life time: 21.7 fm/c
 • (Life time of Ξ^0 : 8.71 cm/c)

About $\Xi(1530)^0$

- **Resonance particles**
 - Short lifetime (fm/c)
 - $\rho[1.3] < K^*[4.2] < \Lambda^*[12.6] < \Xi^0*[21.7] < \phi[46.2]$
 - Powerful tools to probe **hadronic phase after Chemical F.O.**
 - Regeneration, Re-scattering

Scheme-Procedure

- **Final Goal:** Get the number(N) of produced particle in specific condition.

$$\frac{1}{N_E^{INEL>0}} \frac{d^2N}{dydp_T} = \frac{\epsilon^{trigg. INEL>0}}{N_{E,PhysSel}} \frac{N_{raw}}{\Delta p_T \Delta y \Delta Multiplicity\ percentile} \frac{1}{\epsilon_{MC}} \frac{1}{(S.L.)}$$

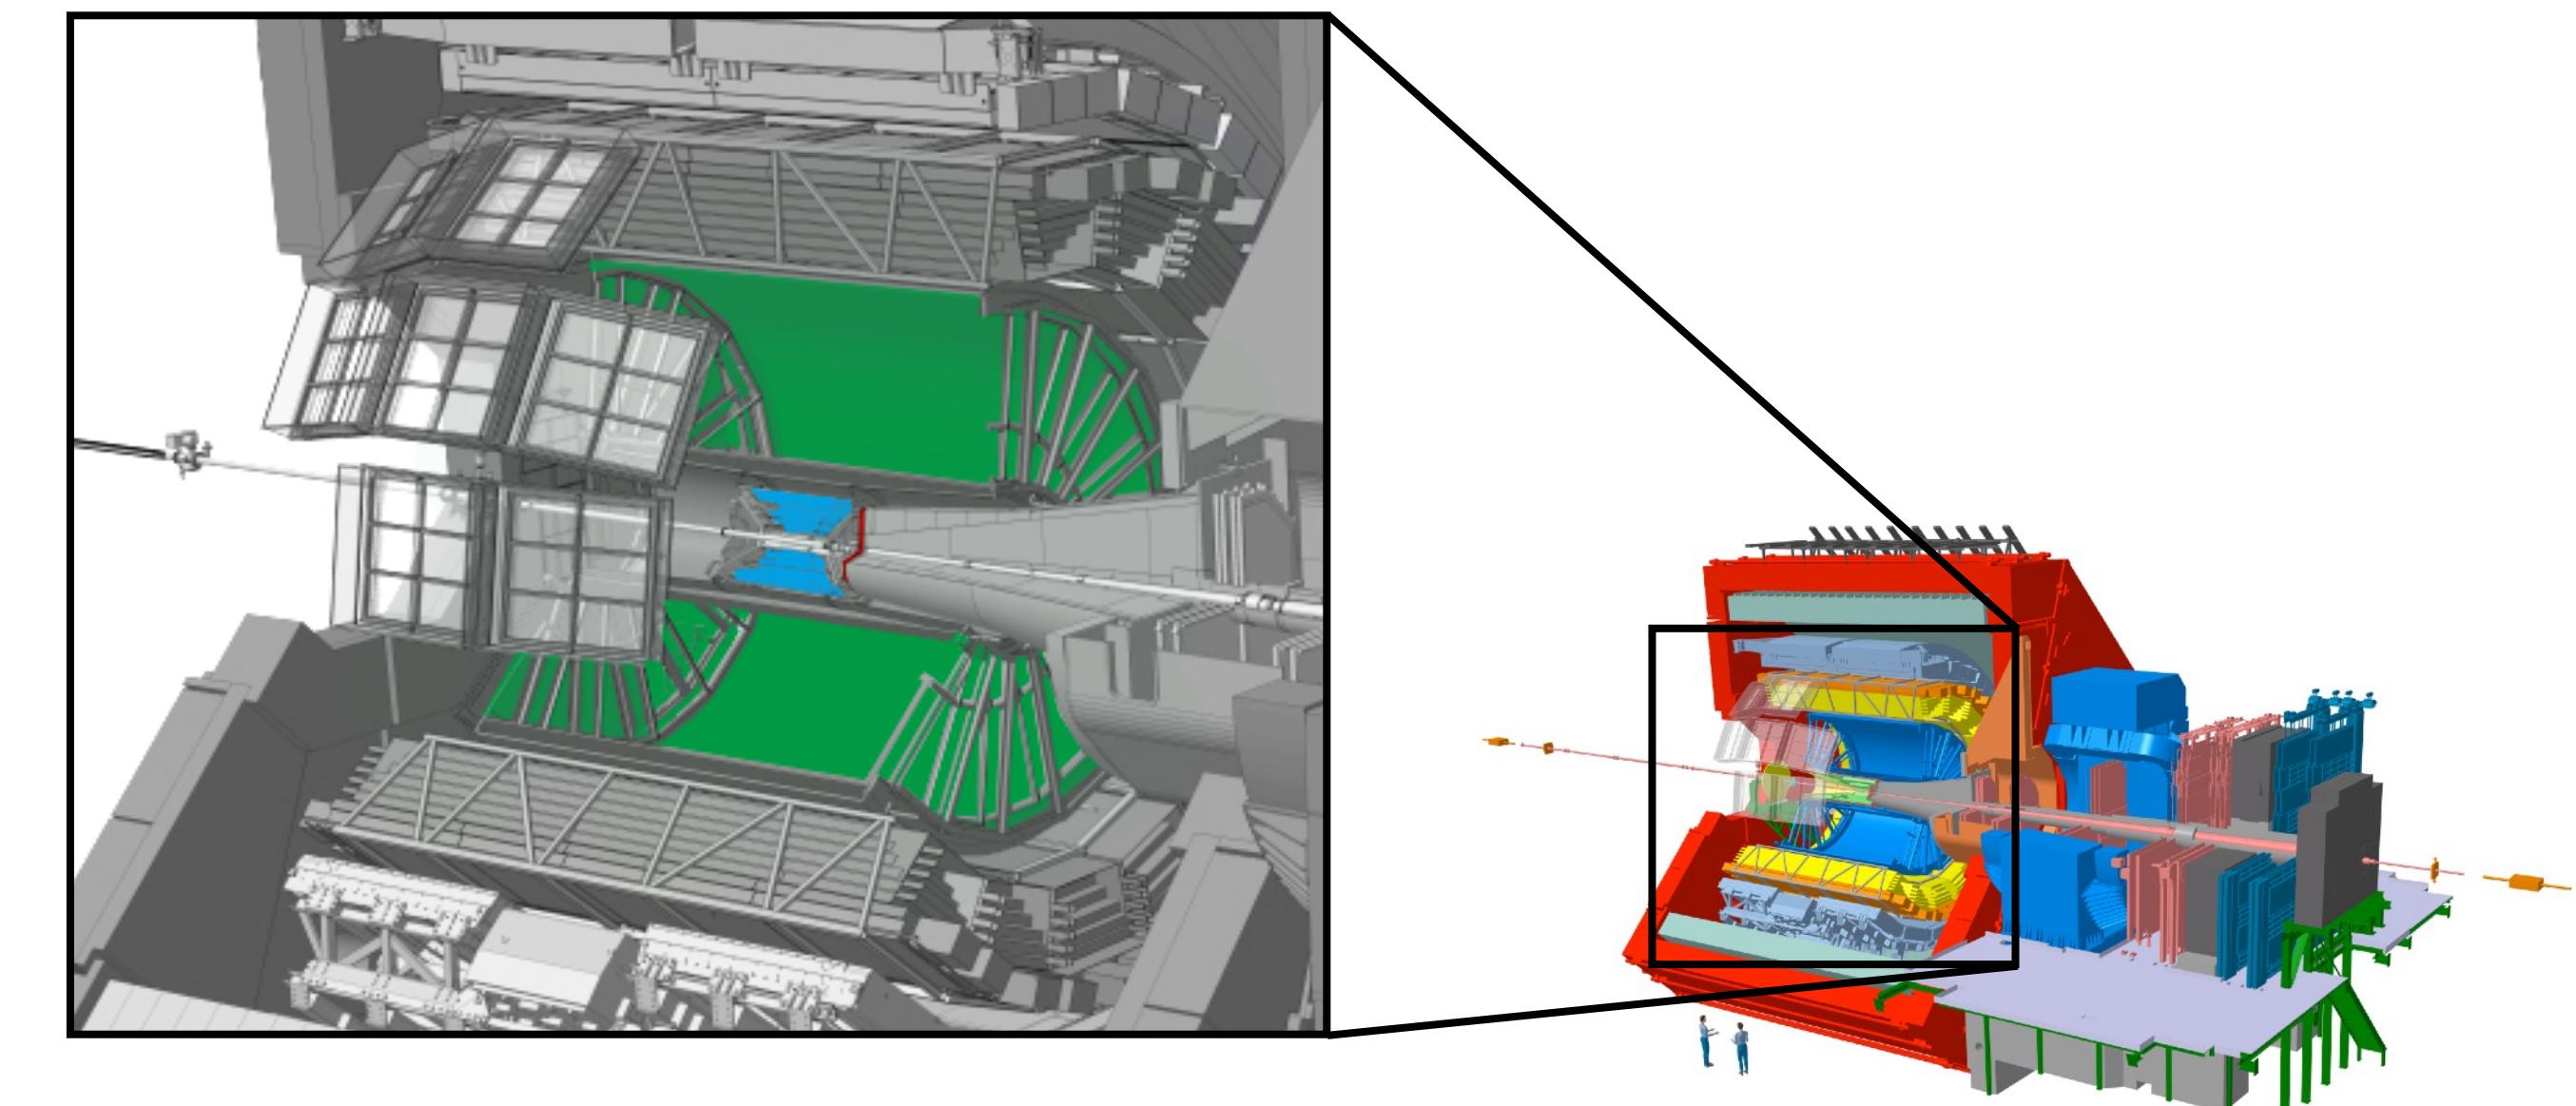

What we want to get**Event Selection****Reconstruction****MC Correction**

- **Analysis Flow:**

- **Used Detectors:**

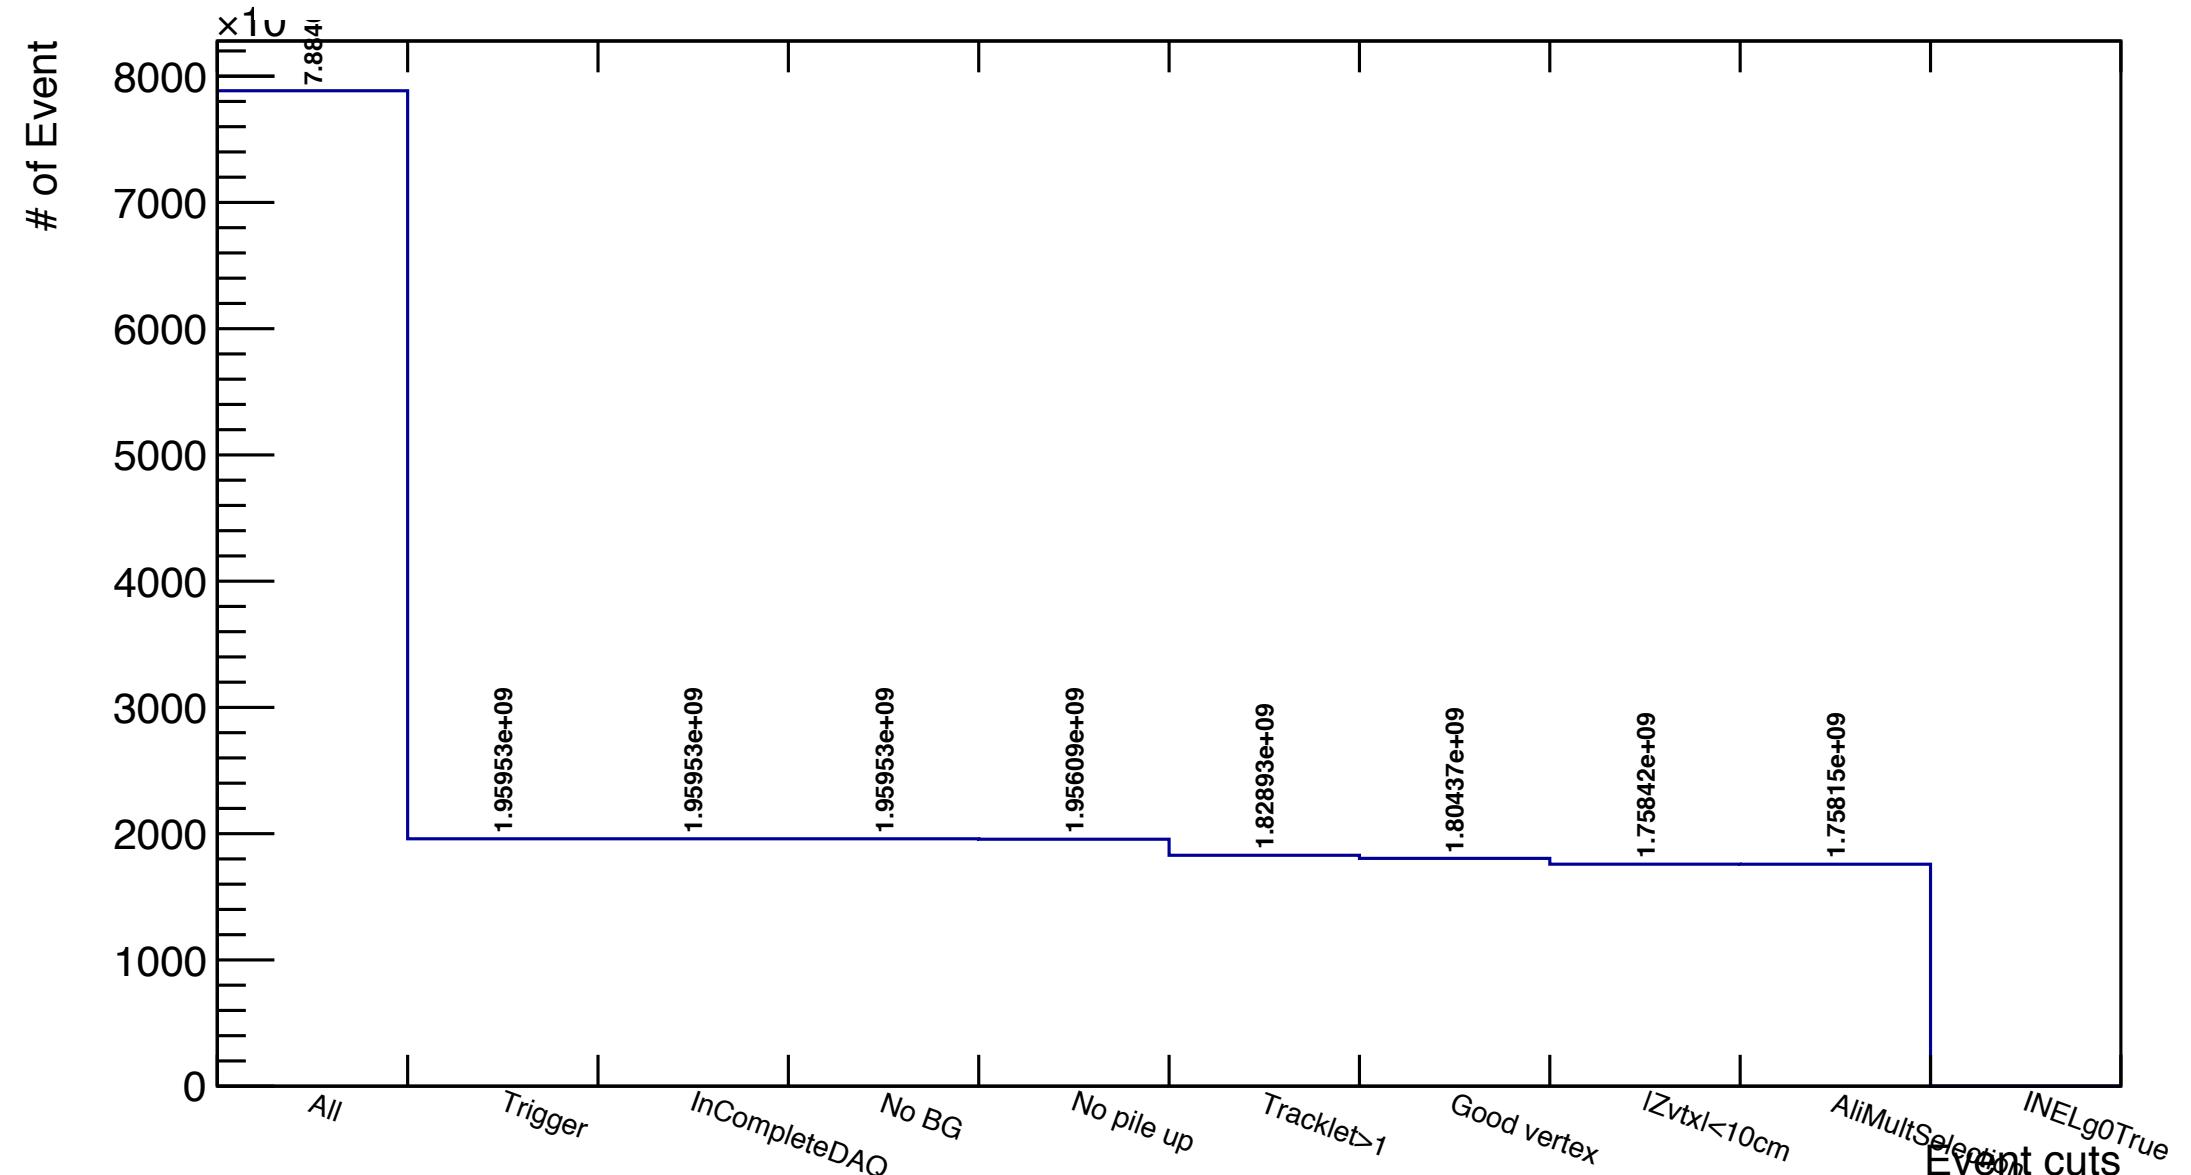

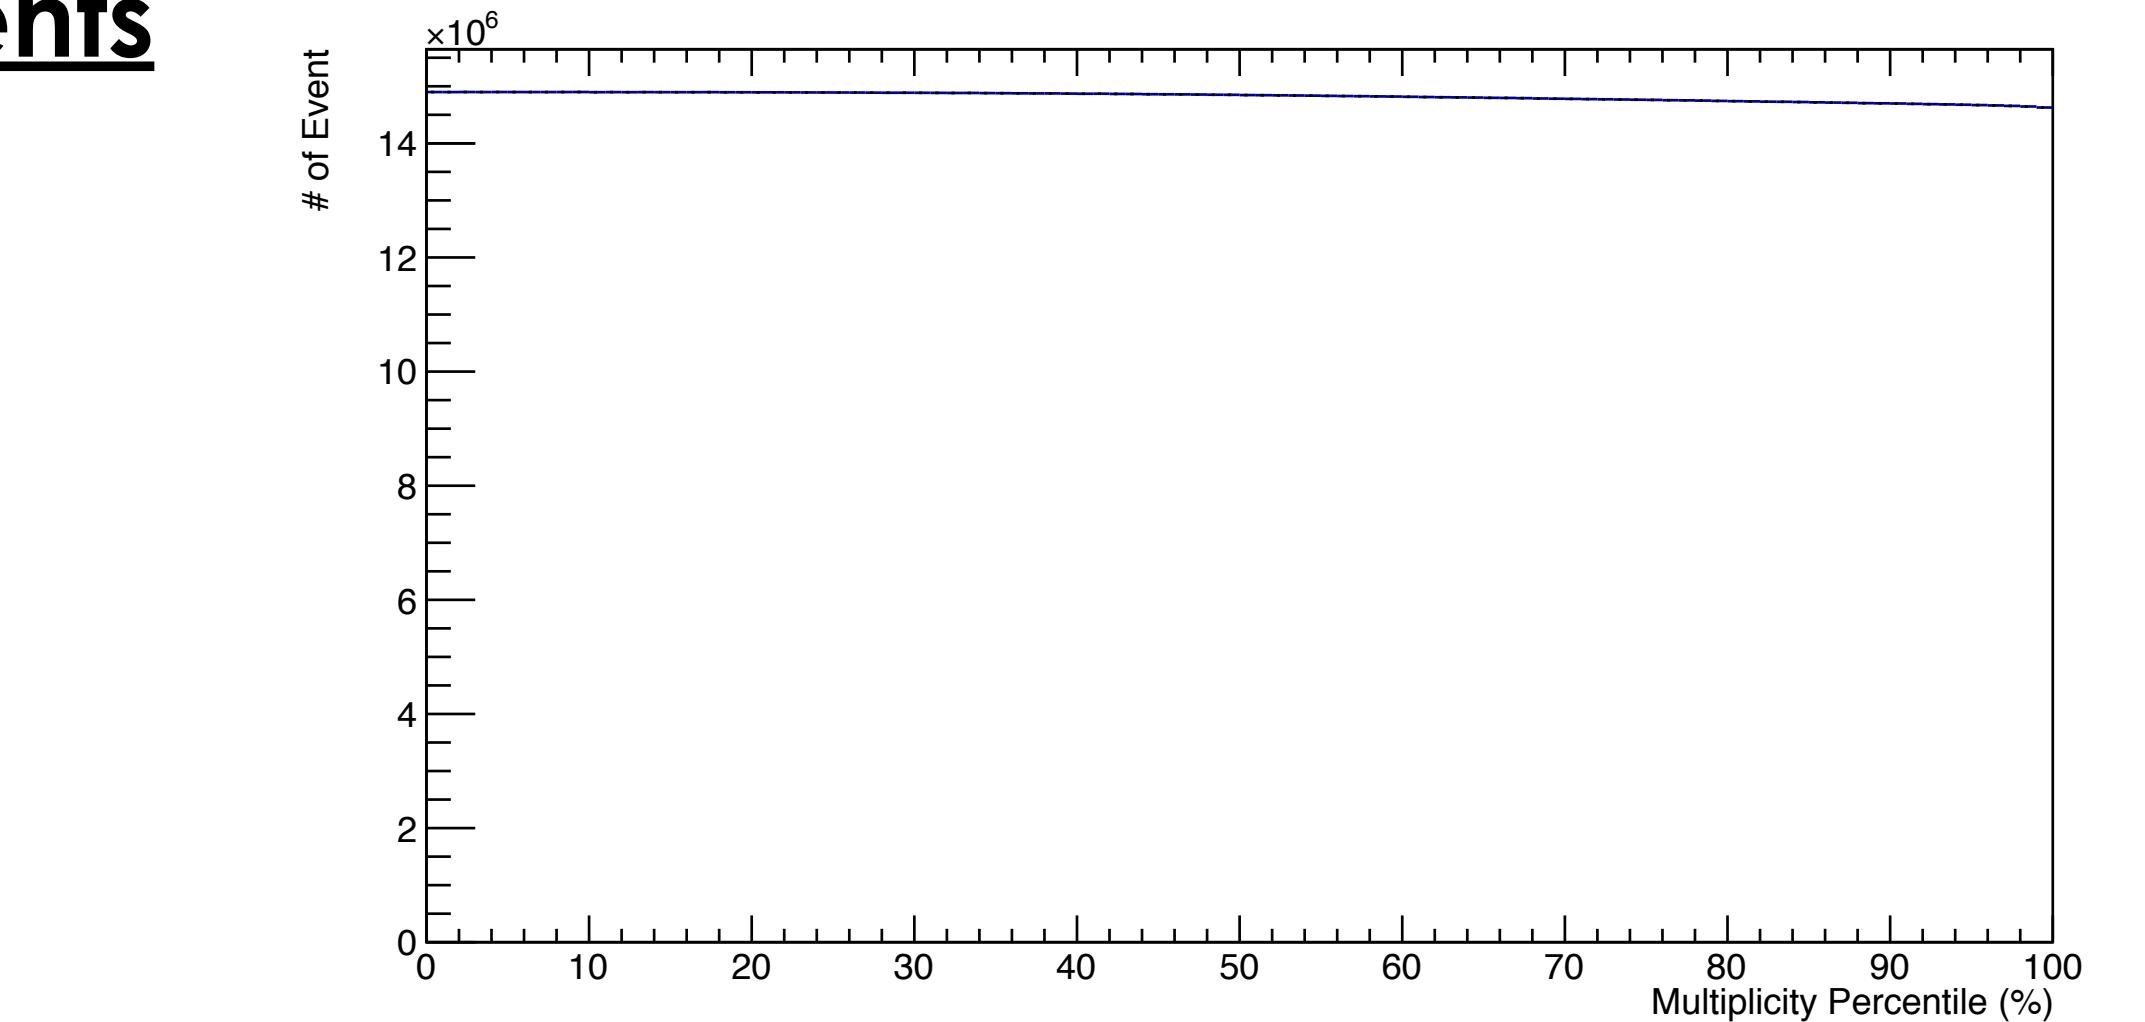

- **ITS:** Trigger / Tracker / Vertexer
- **V0:** Trigger / Multiplicity Estimator
- **TPC:** Tracker / PID(dE/dX)

Analysis Details

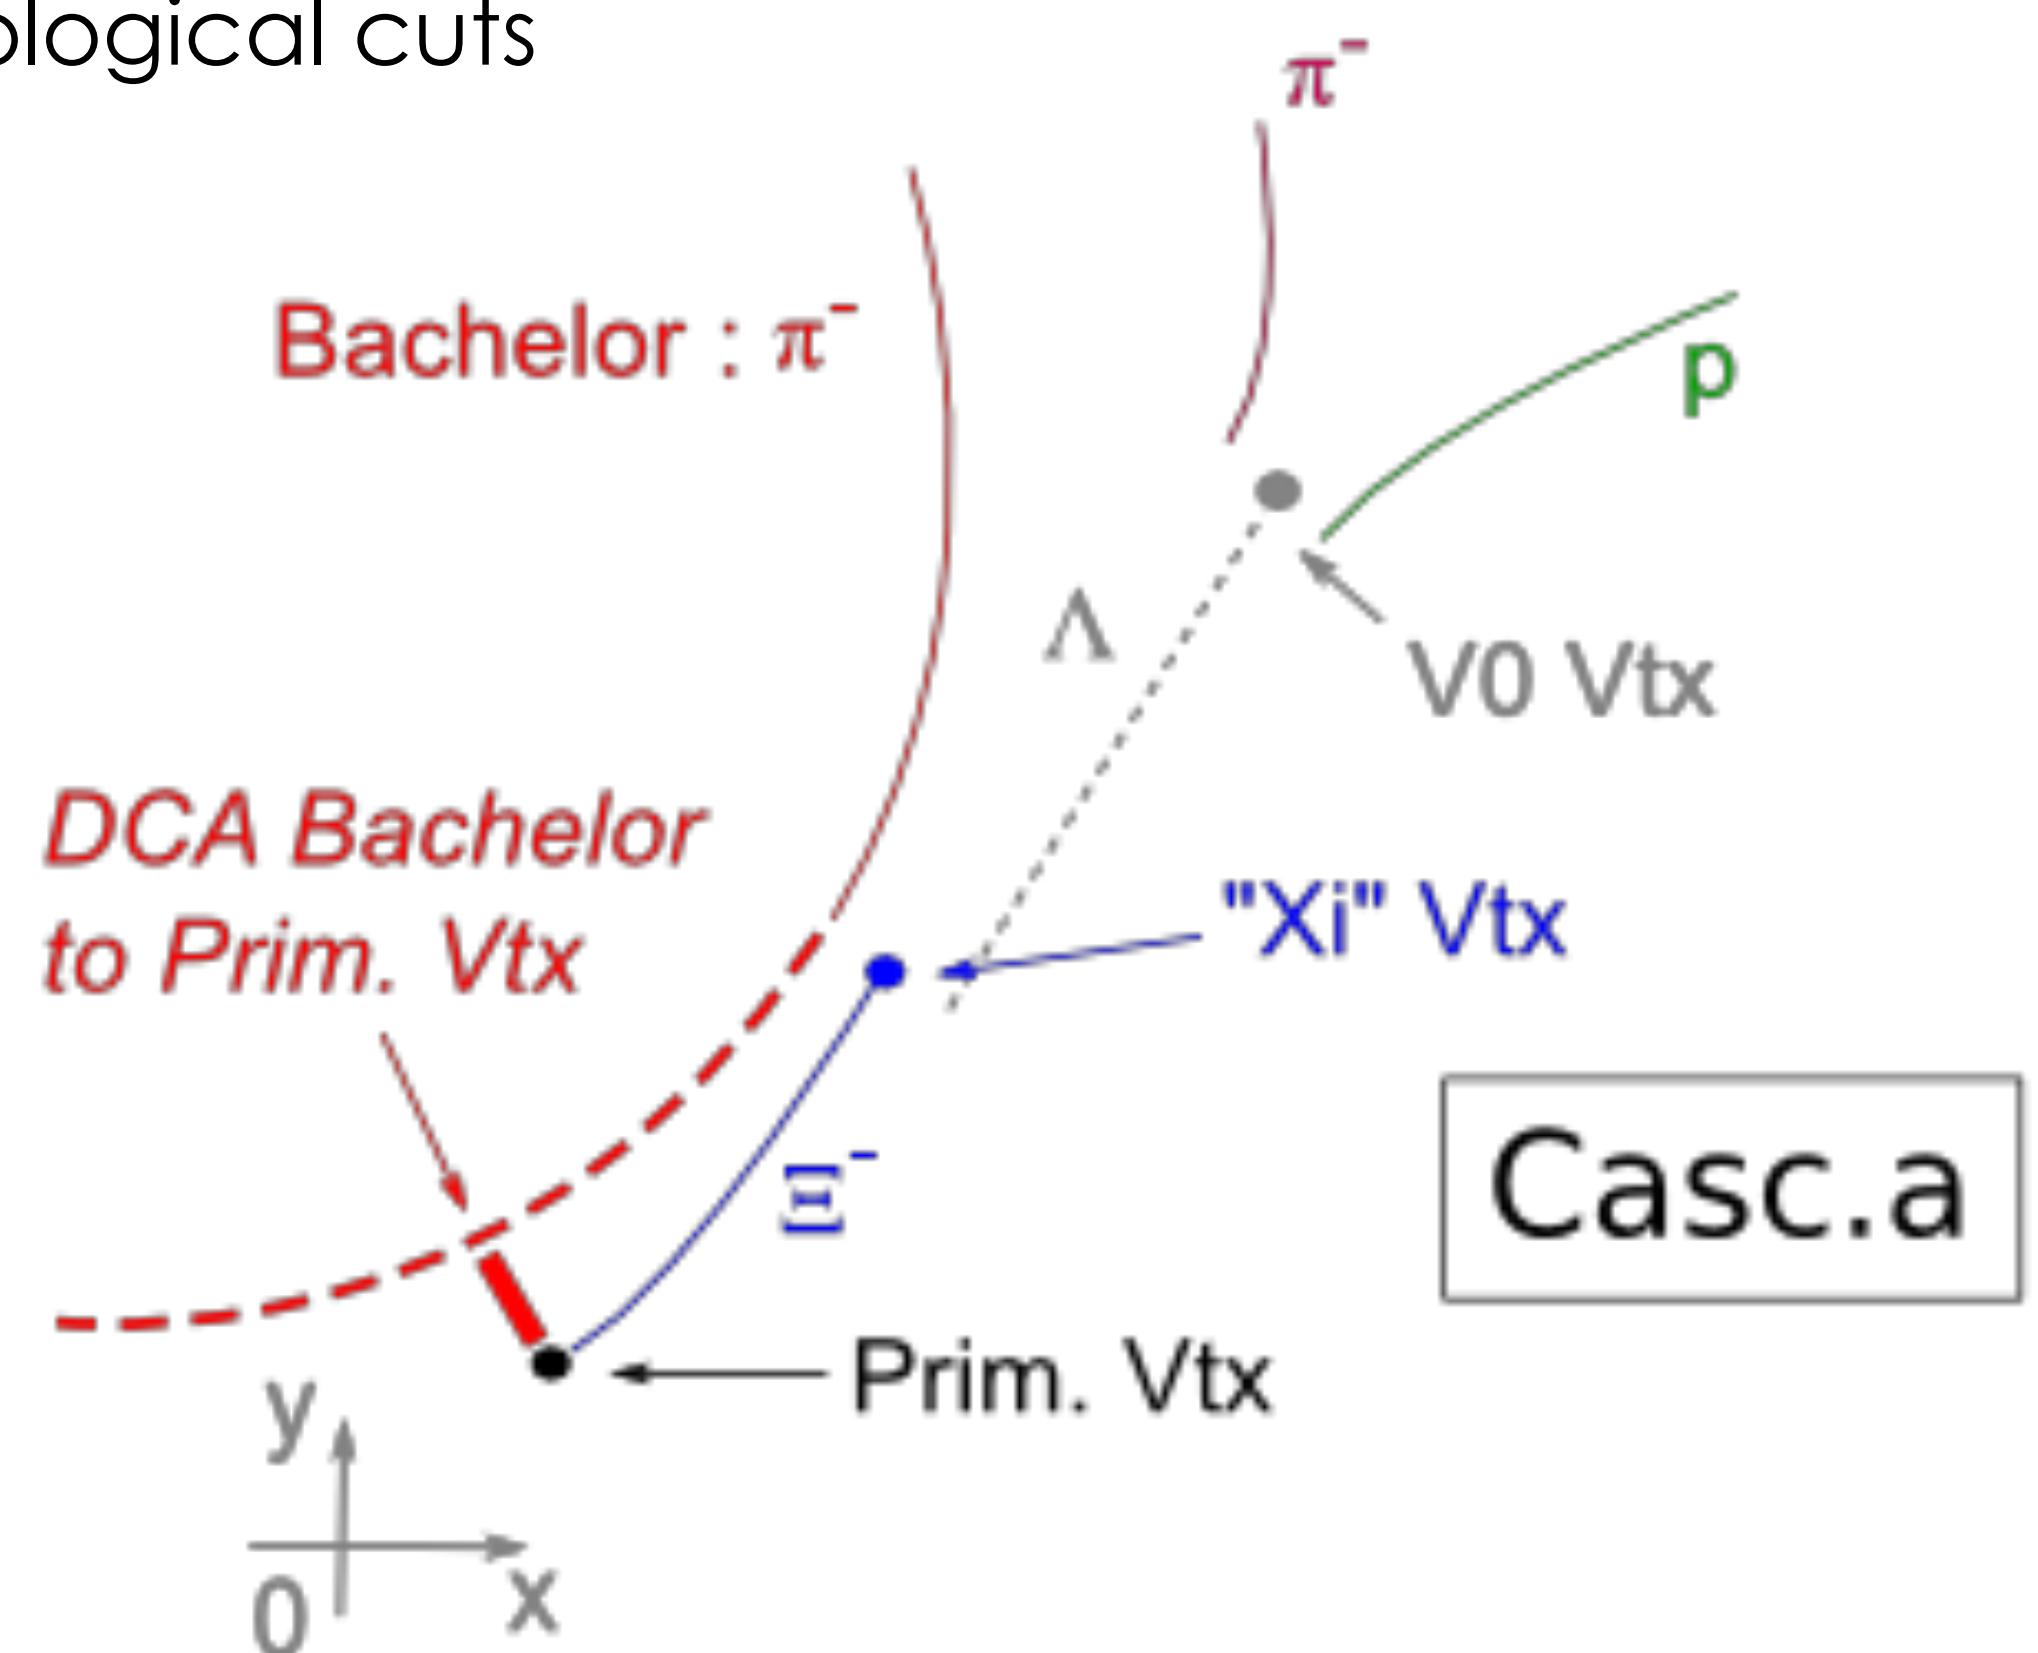

Event Selection → Track Reconstruction → MC Correction → Final Result

- **Data set:** All available pp 13 TeV collision data, **1.96B events**
 - LHC15fi_16deghijklop_17cefgijklmor_18bdefghikmnop
- **Trigger:** kINT7, Minimum bias trigger (V0A && V0C)
- **Event cuts:**
 - IsIncompleteDAQ
 - IsSPDClusterVsTrackletBG
 - IsNotPileupSPDInMultBins
 - Good Vertex Selection:
 - $|z_{\text{Vertex}}| < 10 \text{ cm}$
 - SPDVertex dispersion $< 0.04 \text{ cm}$
 - zVertex resolution $< 0.25 \text{ cm}$
 - z-position difference $< 0.5 \text{ cm}$
 - IsSelected in AliMultSelection

Event Selection → Track Reconstruction → MC Correction → Final Result

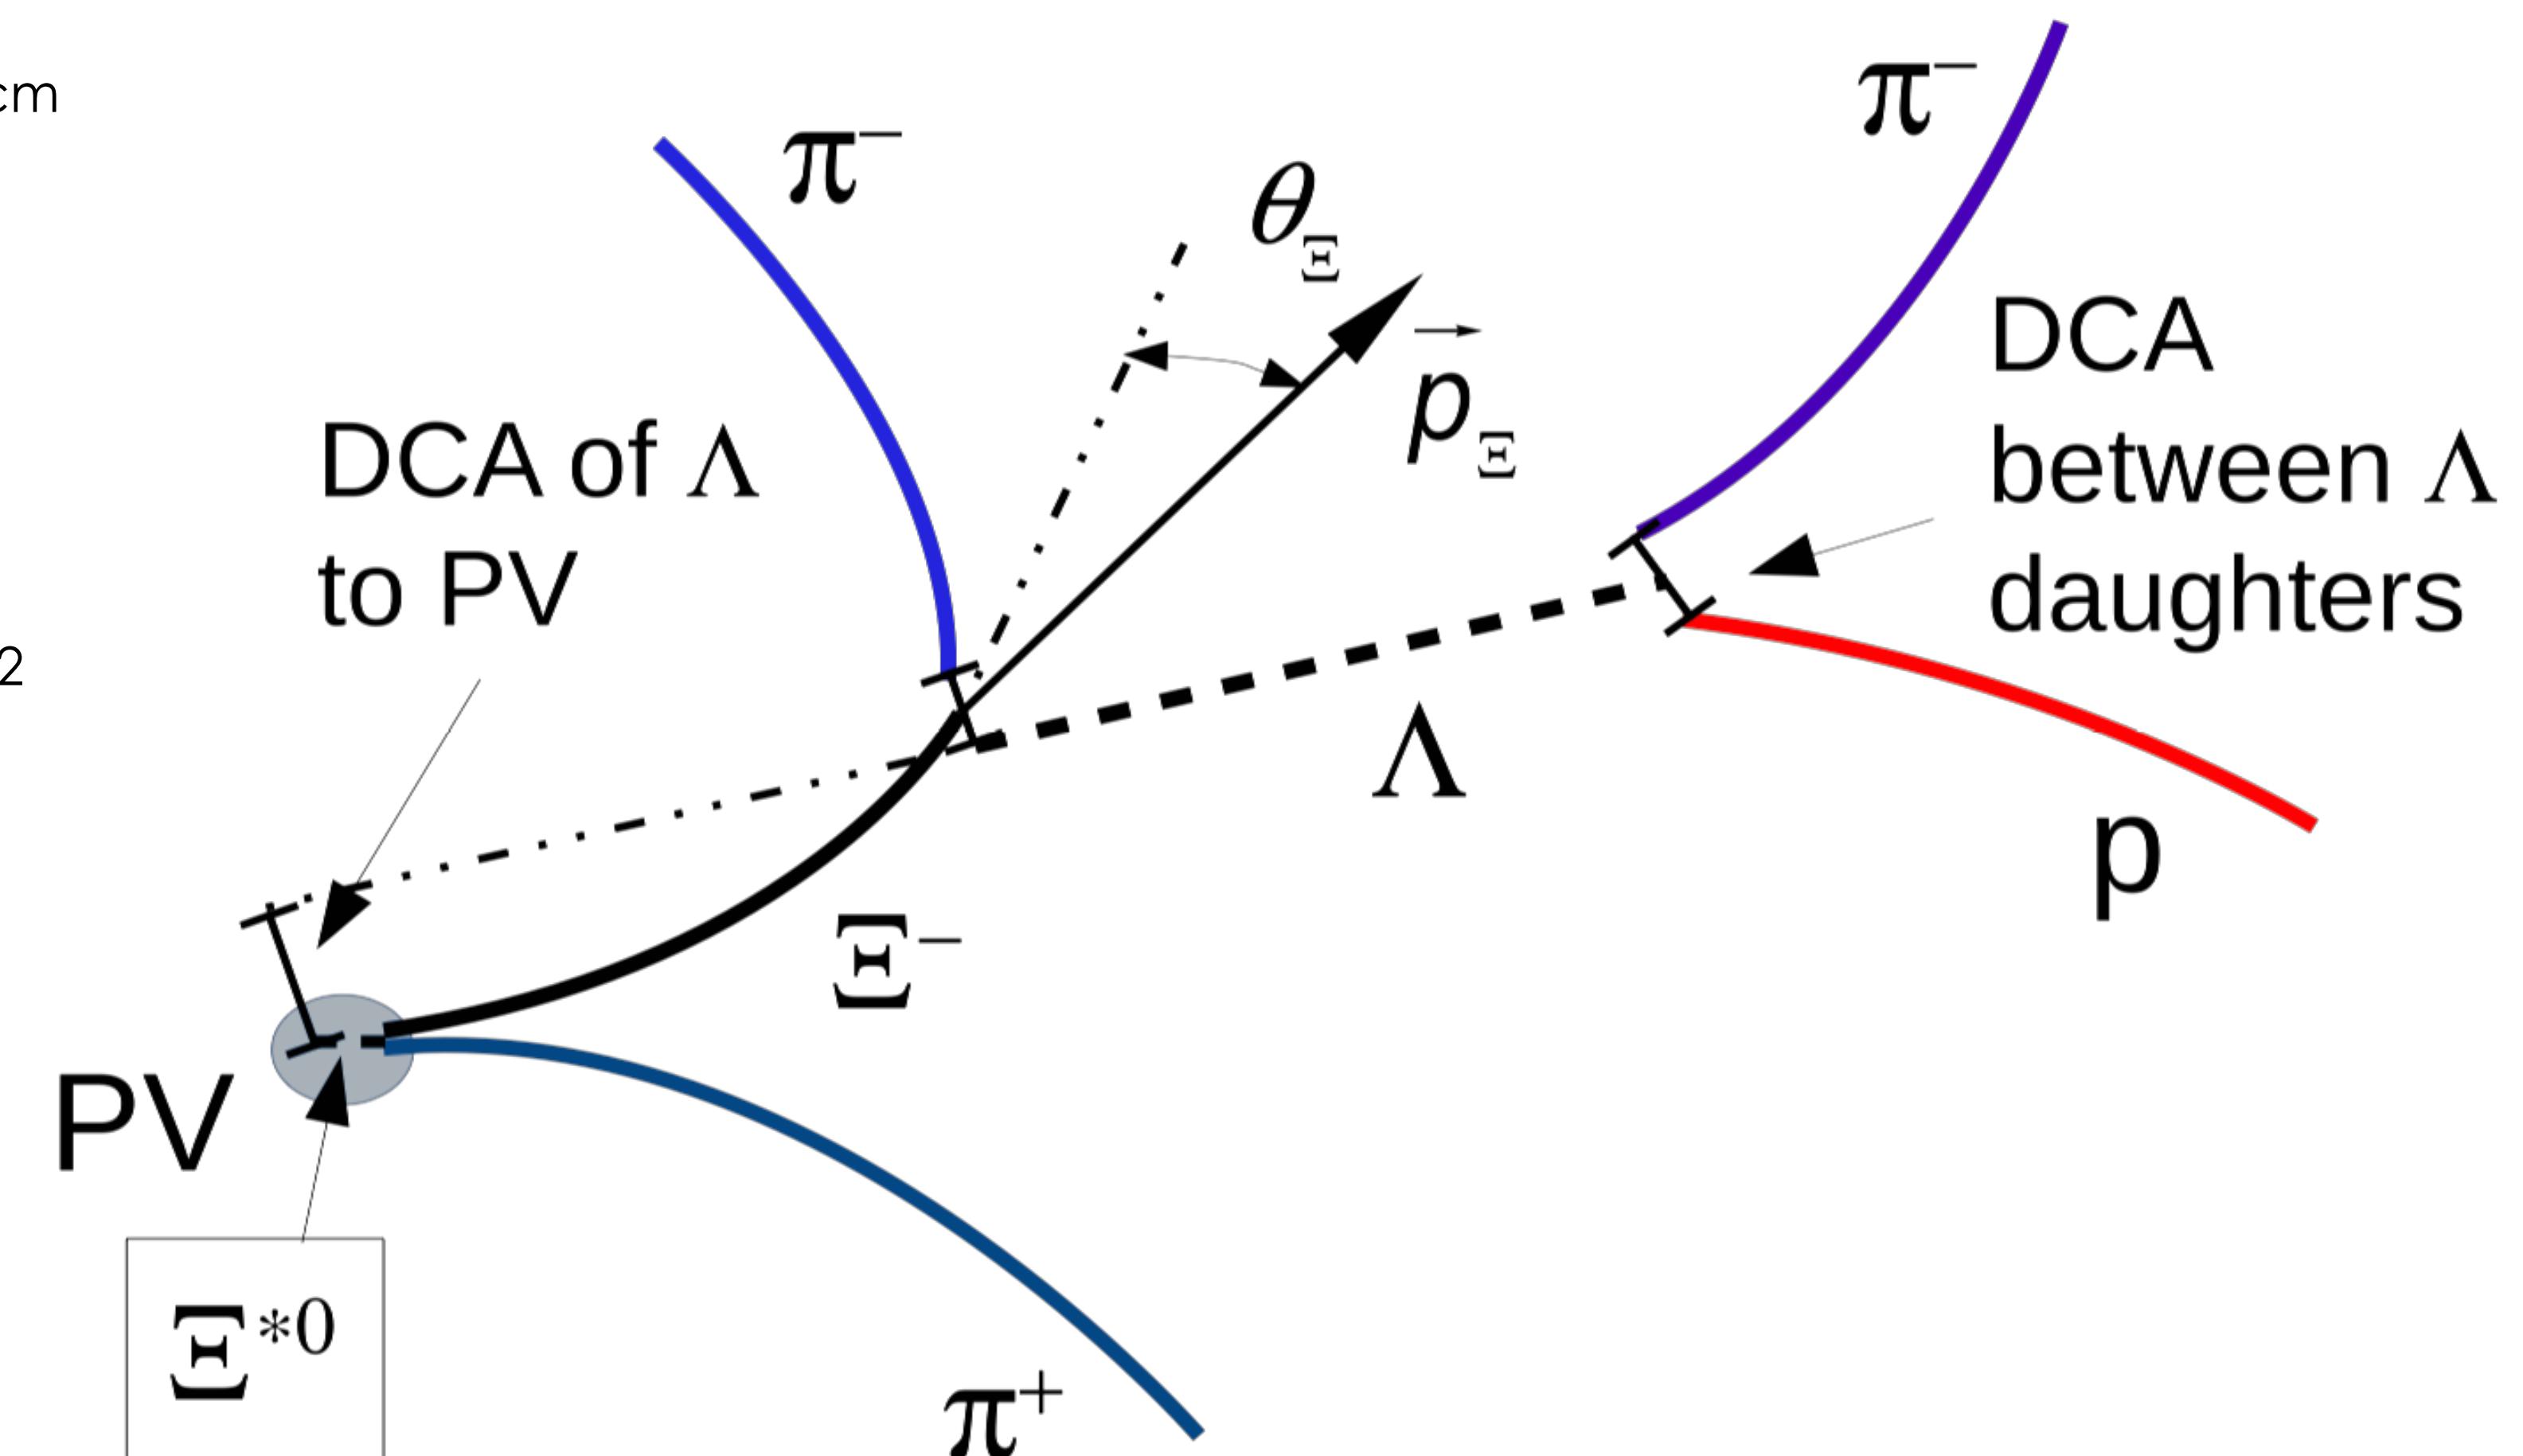

- **Decay channel:** $\Xi^* \rightarrow \Xi^- + \pi^+$
- **Basic concept:** Select π , and Select Ξ and apply topological cuts
 - Good π Selection(Track cut):
 - Standard 2011 ITS-TPC Track cut([link](#)) with Primary cut option
 - $\eta < |0.8|$
 - $p_T > 0.15 \text{ GeV}/c$
 - TPC PID(π) sigma < 3
 - zVertex dispersion < 2.0 cm
 - Good Ξ Selection(Track cut):
 - Reject AcceptKinkDaughters
 - Number of Clusters in TPC > 50
 - Require TPC Refit
 - Chi2 Per Cluster TPC < 4
 - $p_T > 0.15 \text{ GeV}/c$
 - TPC PID(π, p, Λ) sigma < 3

Event Selection → Track Reconstruction → MC Correction → Final Result

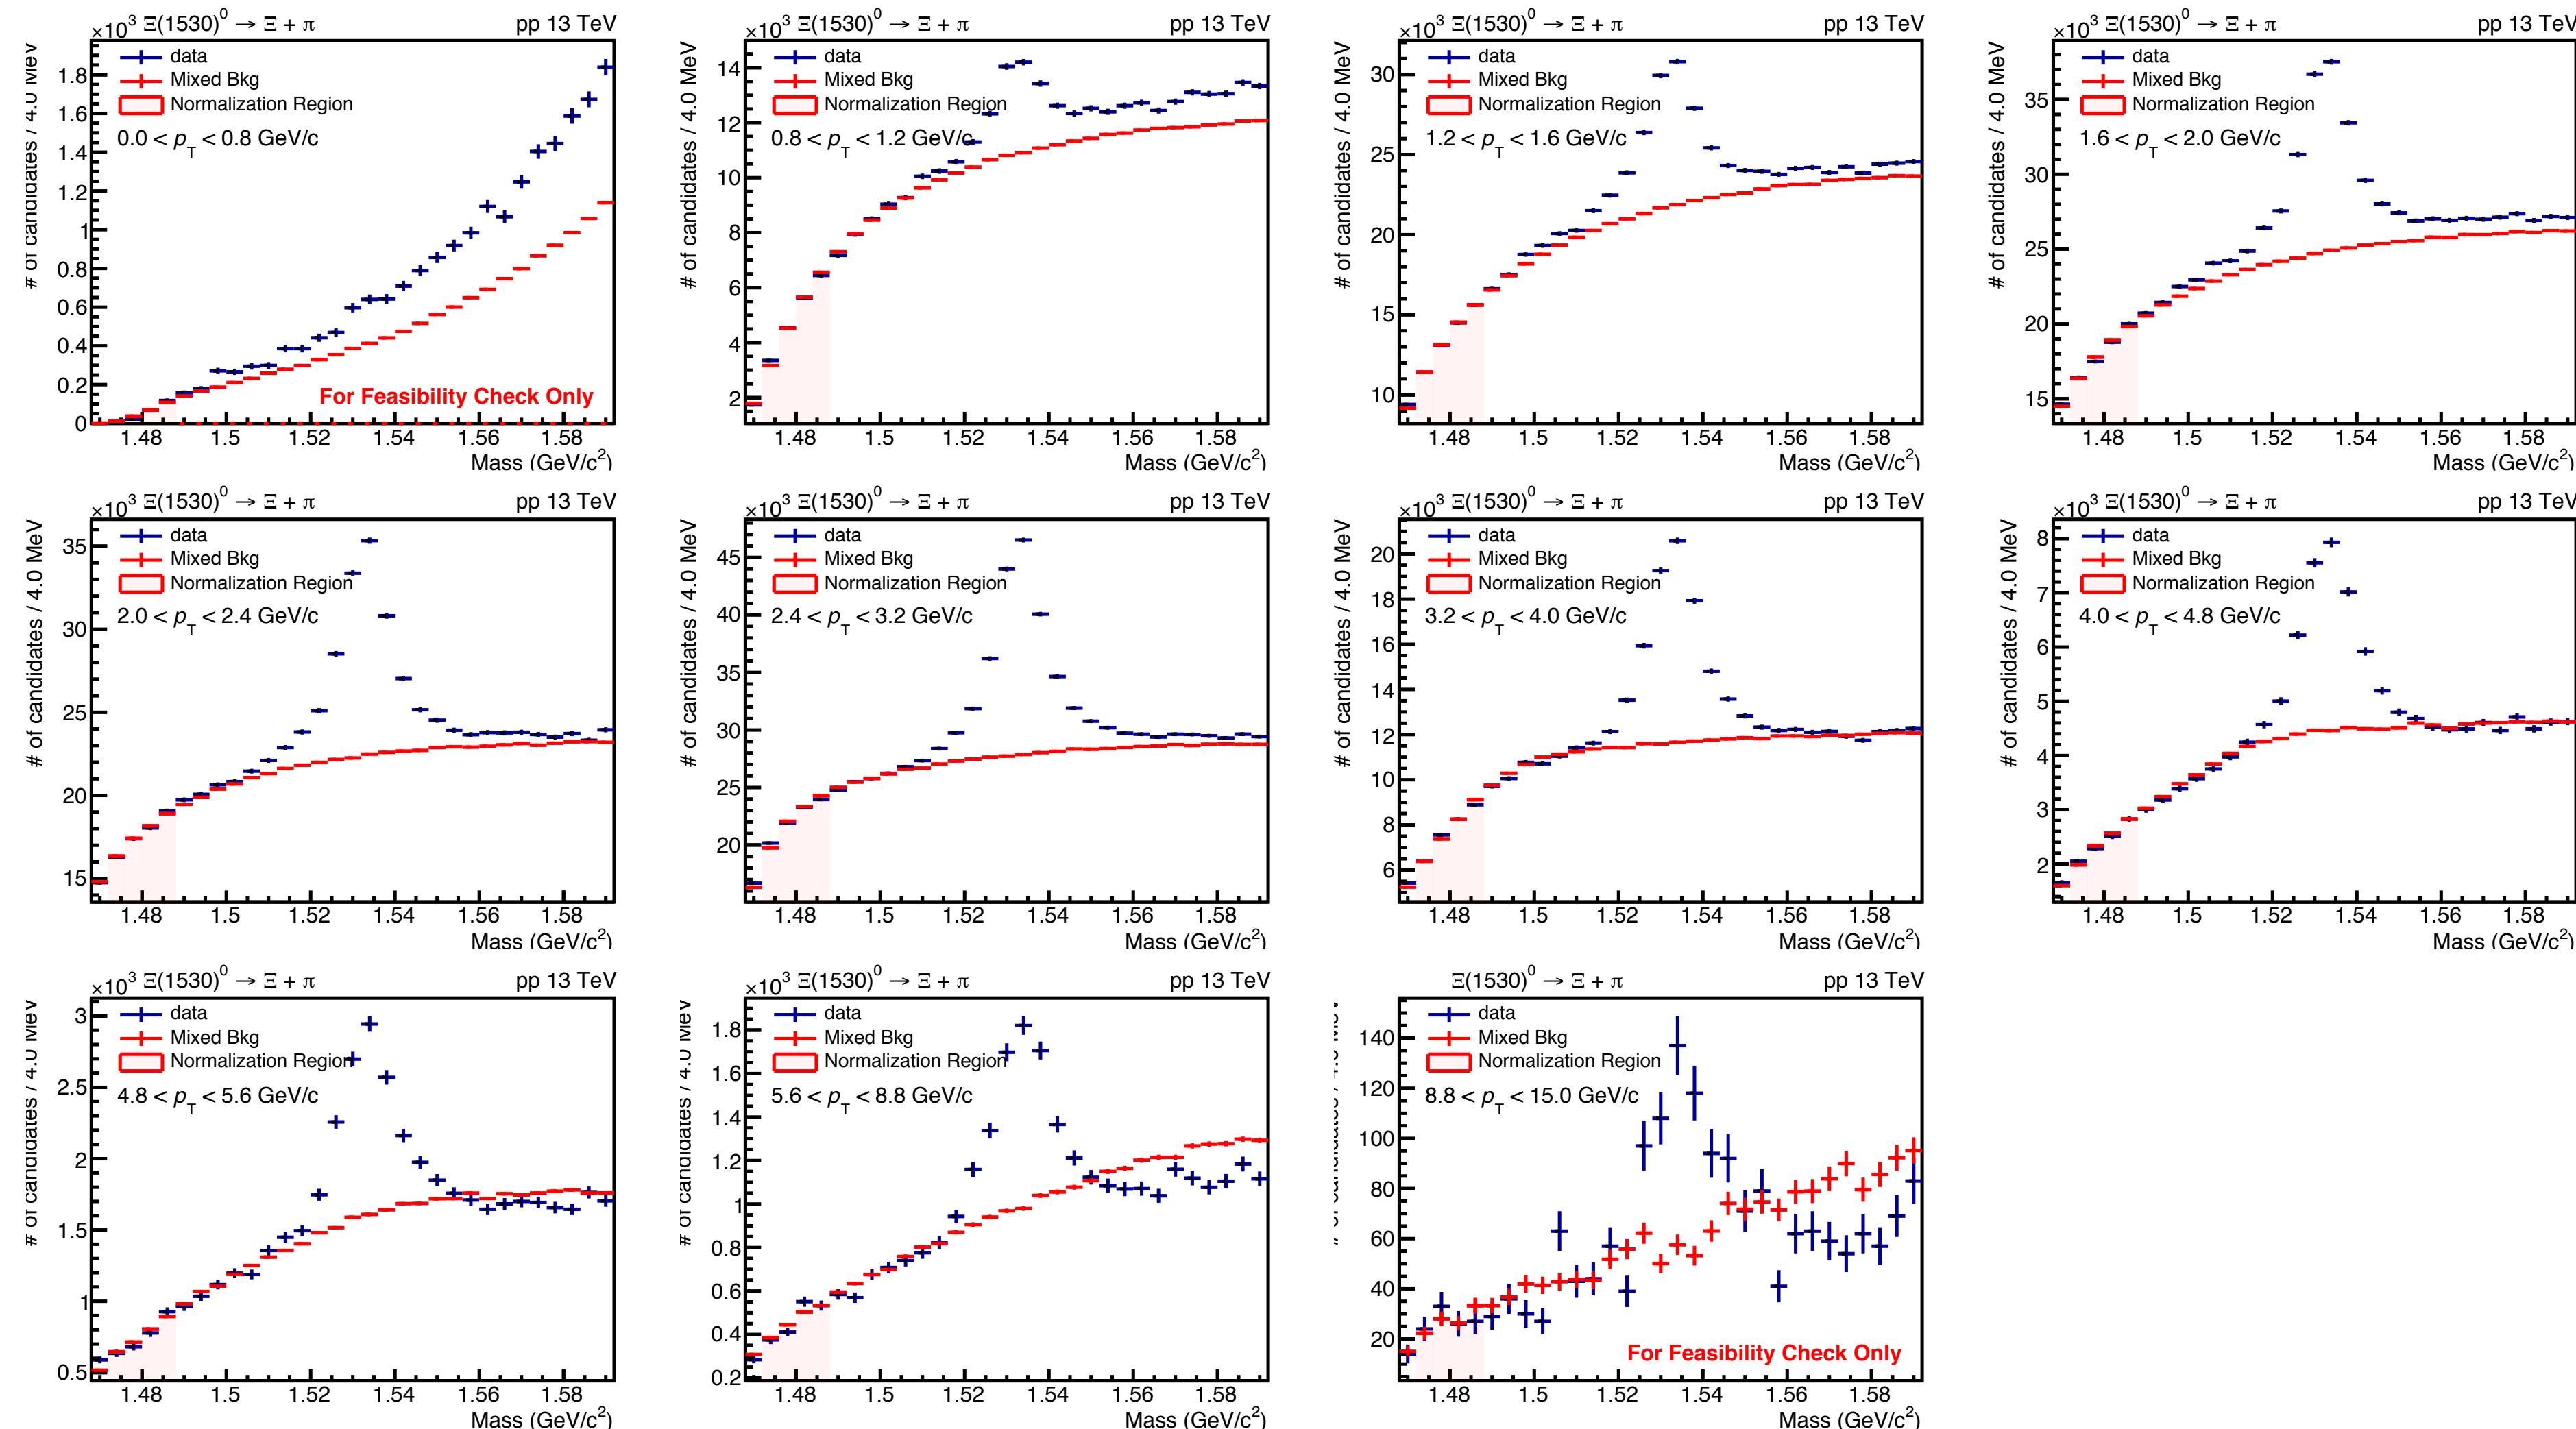

- **Topological Selection:**

- DCA of Λ to PV > 0.07 cm
- DCA between Λ daughters < 1.6 cm
- DCA Λ and second emitted pion < 1.6 cm
- Decay length xy of Λ > 1.4 cm
- Decay length xy of $\Xi\bar{\Xi}$ > 0.8 cm
- Fiducial limit of Λ and $\Xi\bar{\Xi}$ = 100 cm
- Cosine of pointing angle of Λ > 0.97
- Cosine of pointing angle of $\Xi\bar{\Xi}$ > 0.97
- Mass Window of Λ and $\Xi\bar{\Xi}$ = ± 6 MeV/c²
- $\Xi(1530)0$ $|y| < 0.5$

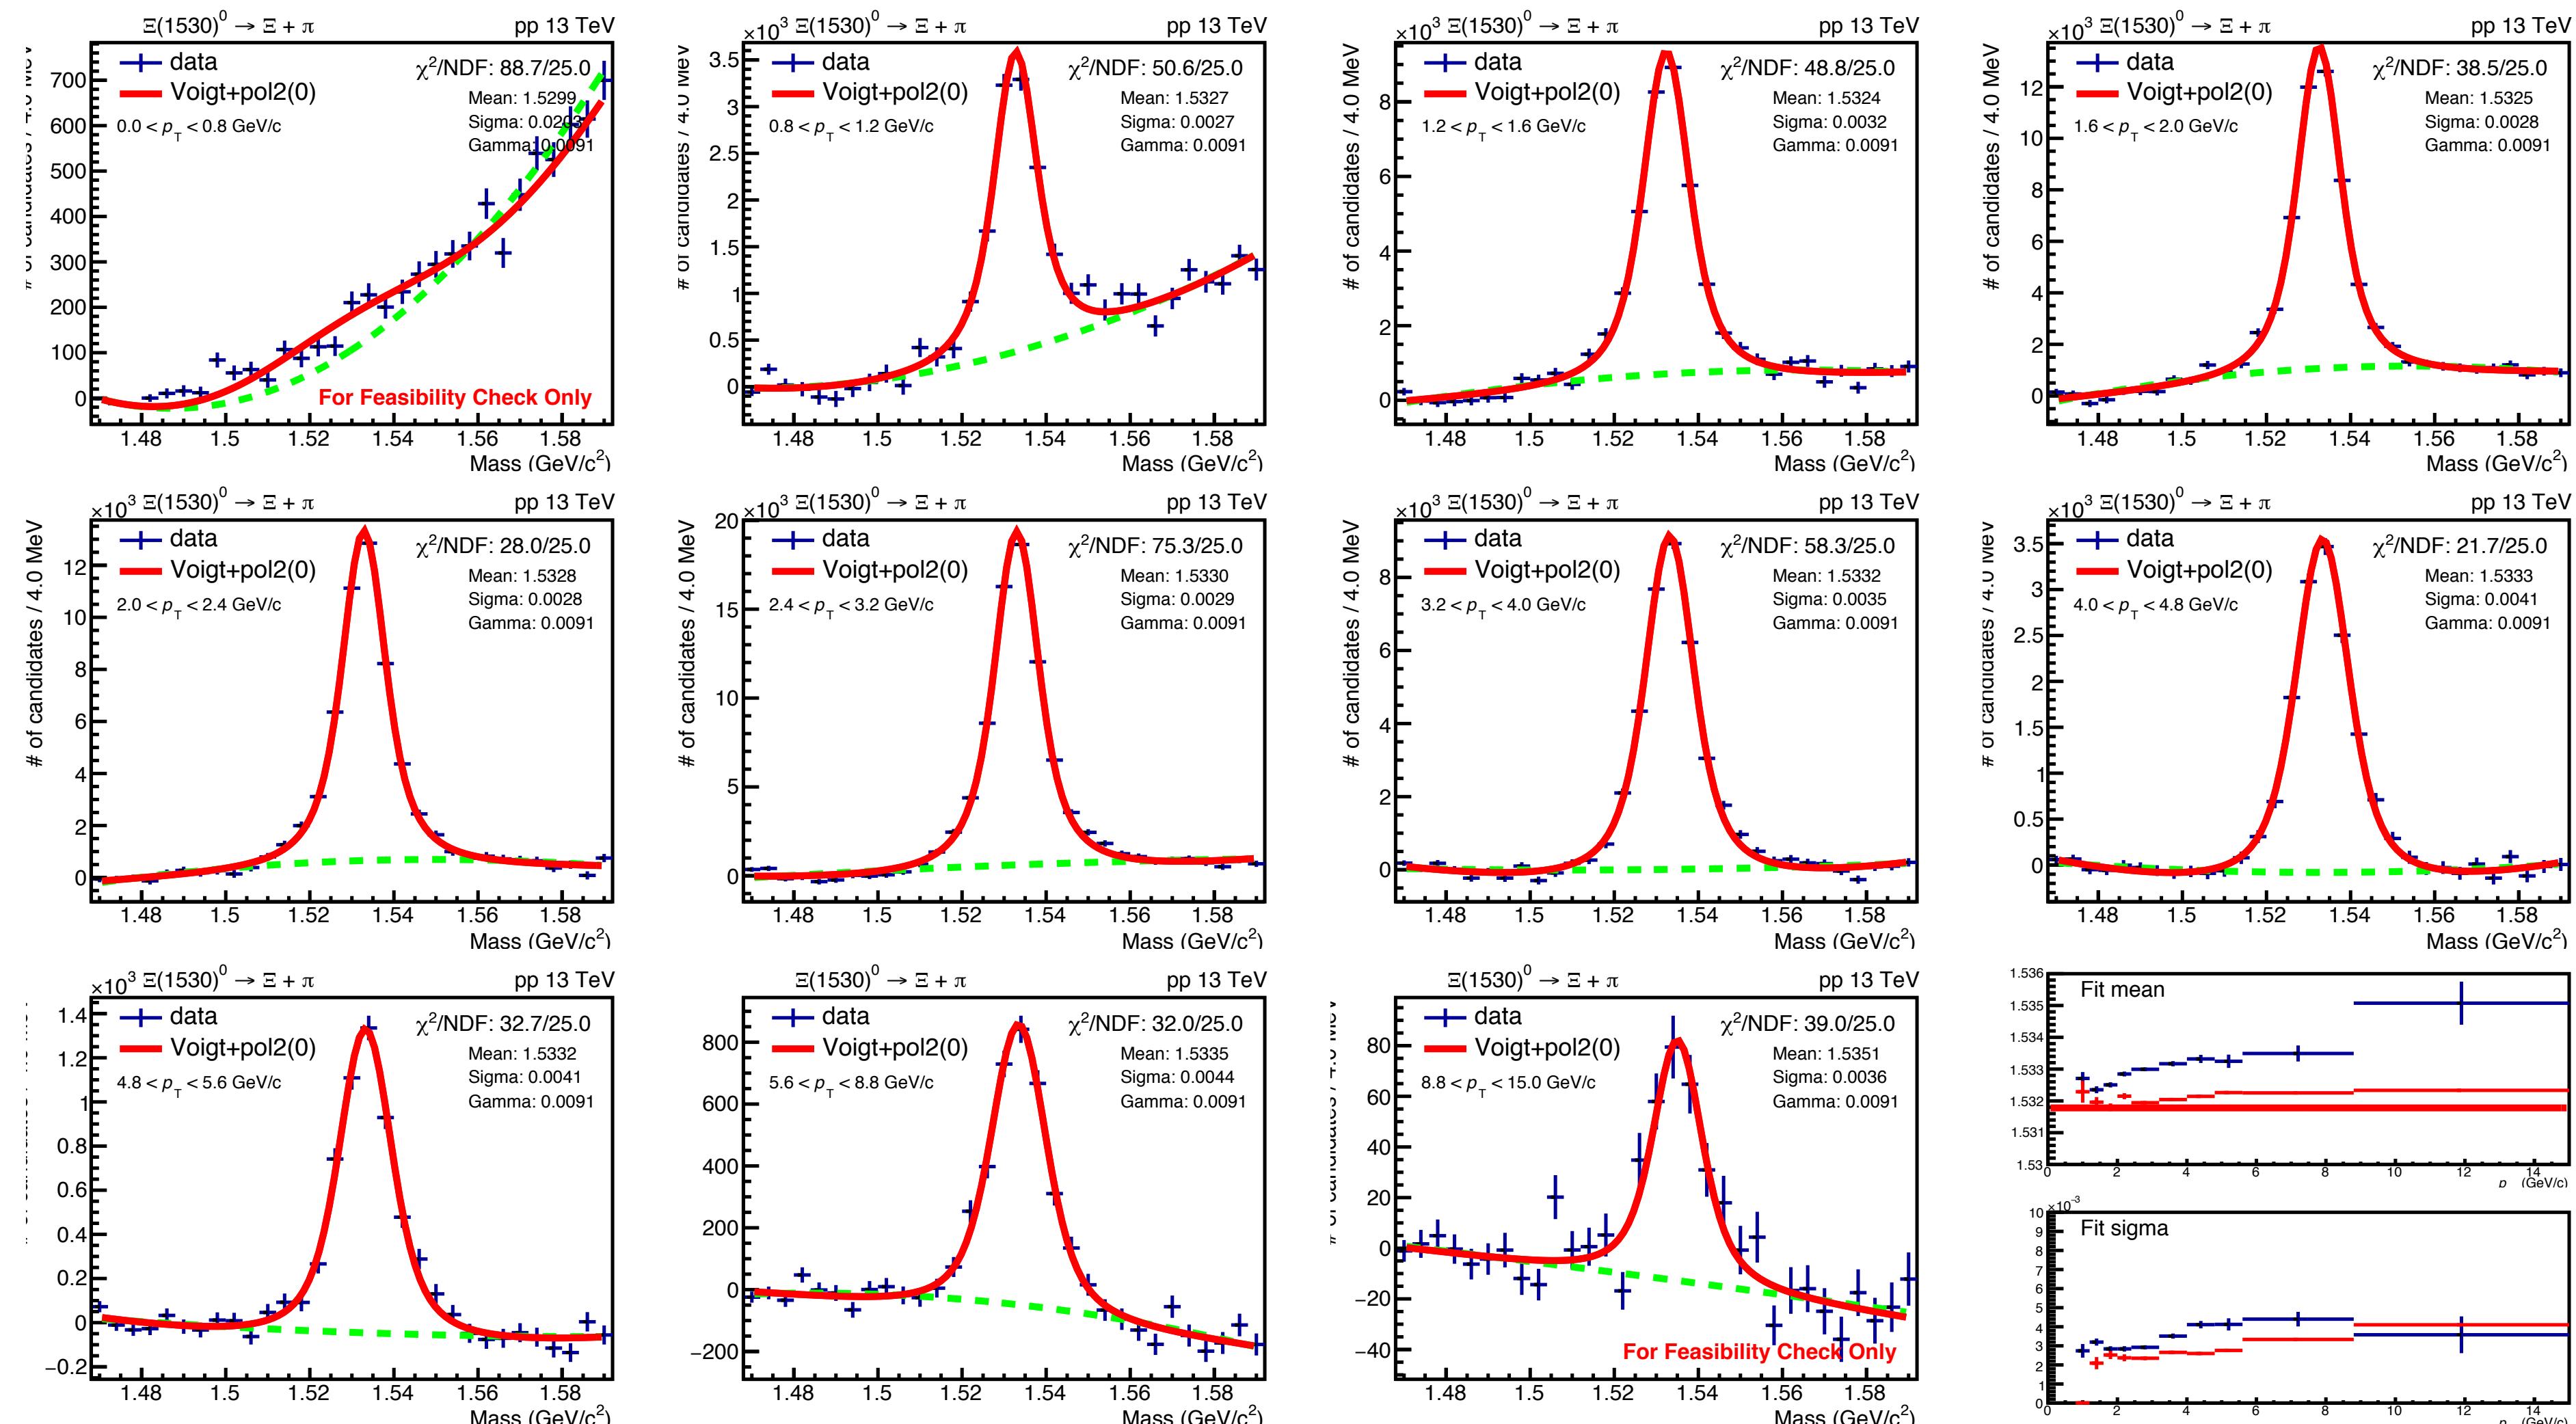

Event Selection → Track Reconstruction → MC Correction → Final Result

- Reconstructed Signal + Background (0-100% Minimum Bias)**

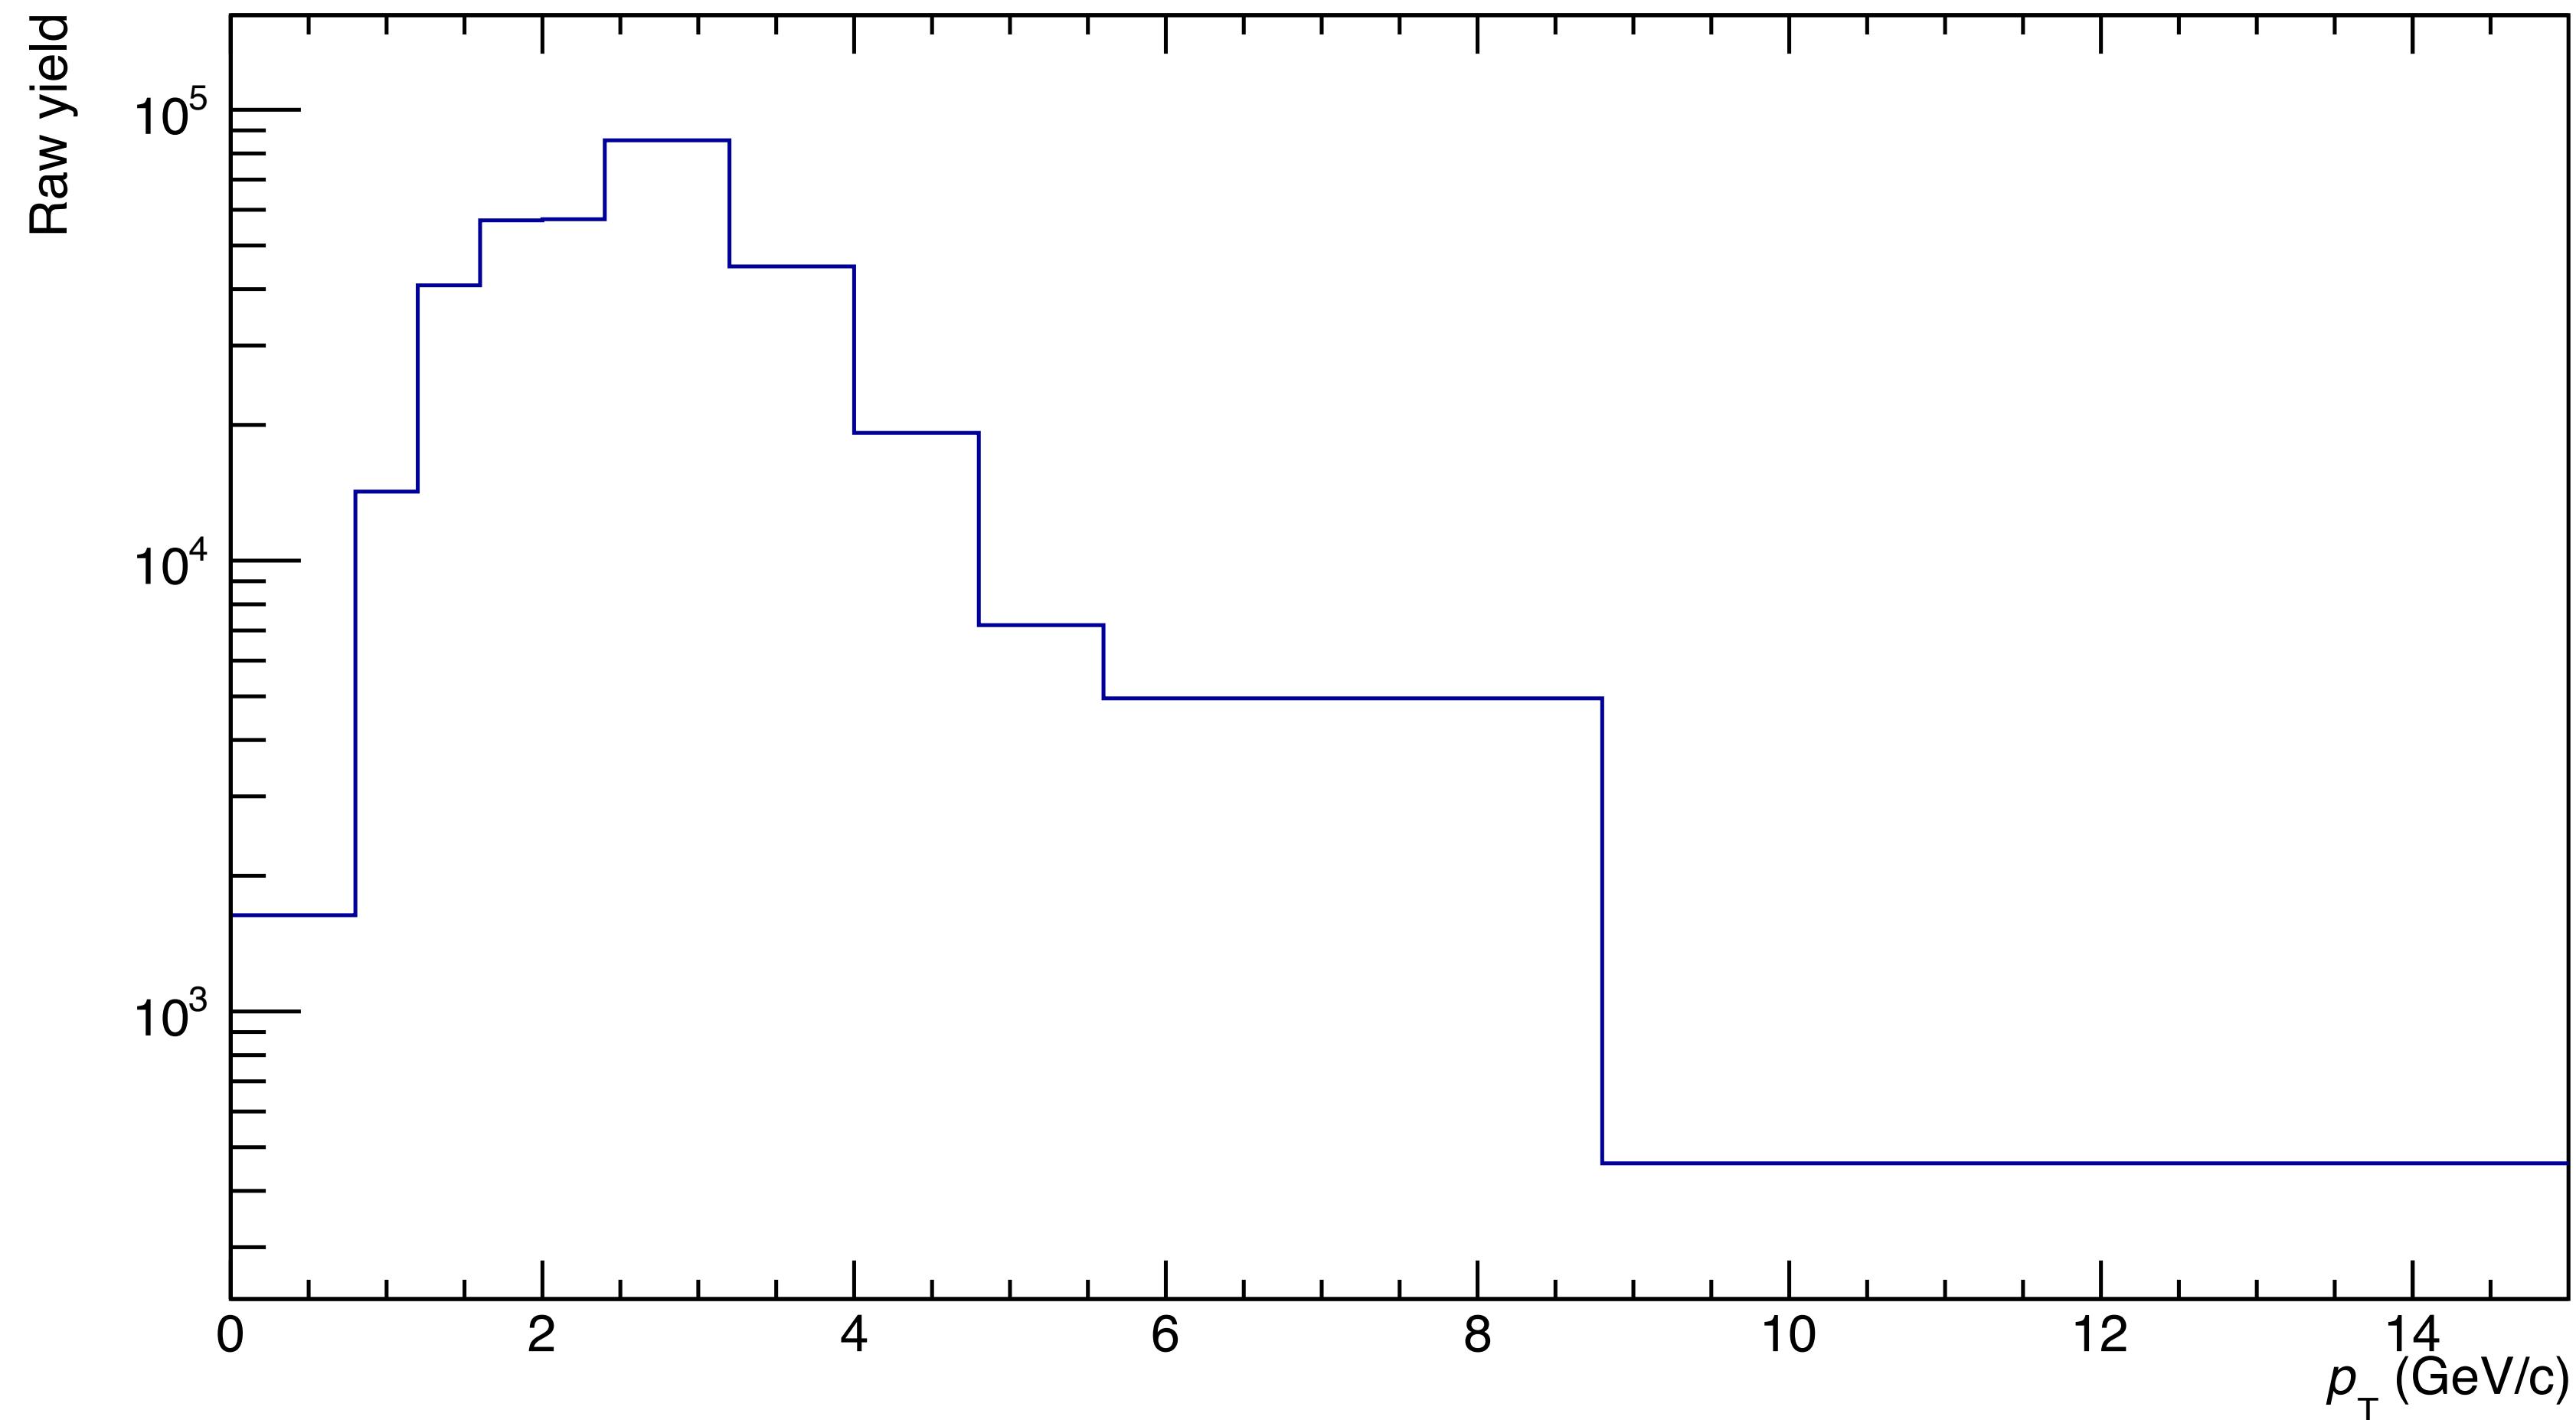

Event Selection → Track Reconstruction → MC Correction → Final Result

- Reconstructed Signal - Background, fit (0-100% Minimum Bias)

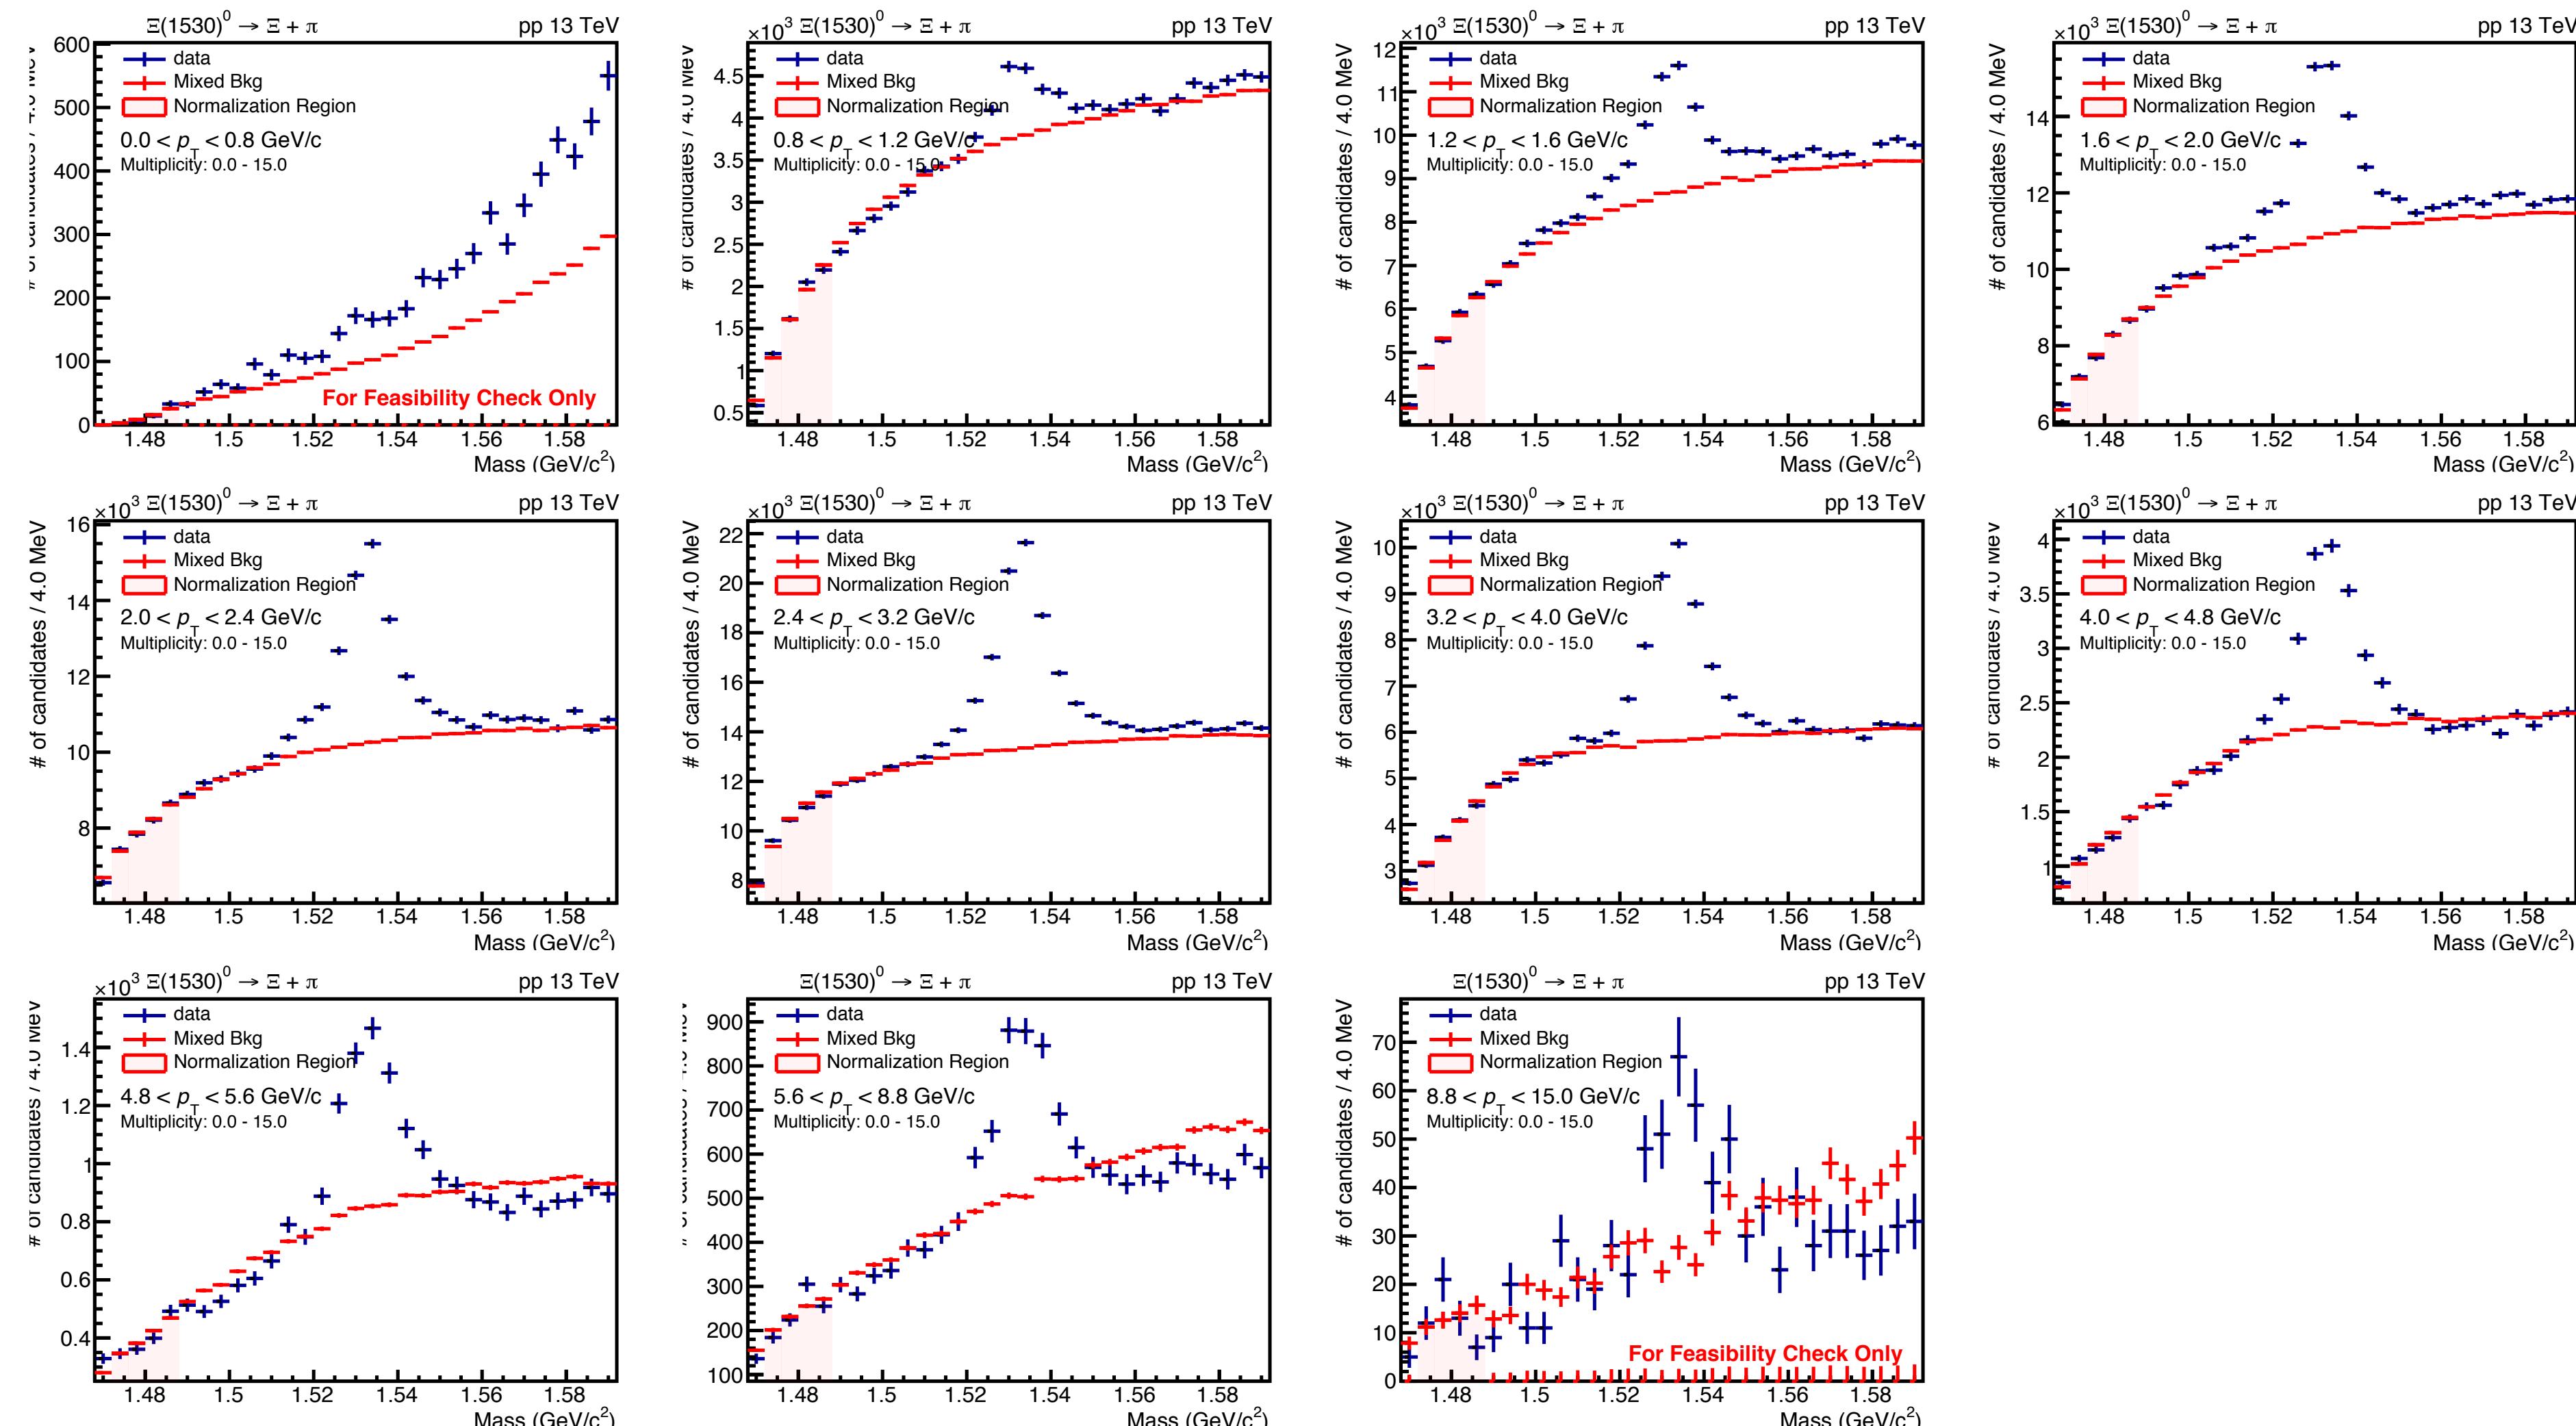

Event Selection → Track Reconstruction → MC Correction → Final Result

- Raw yield distribution

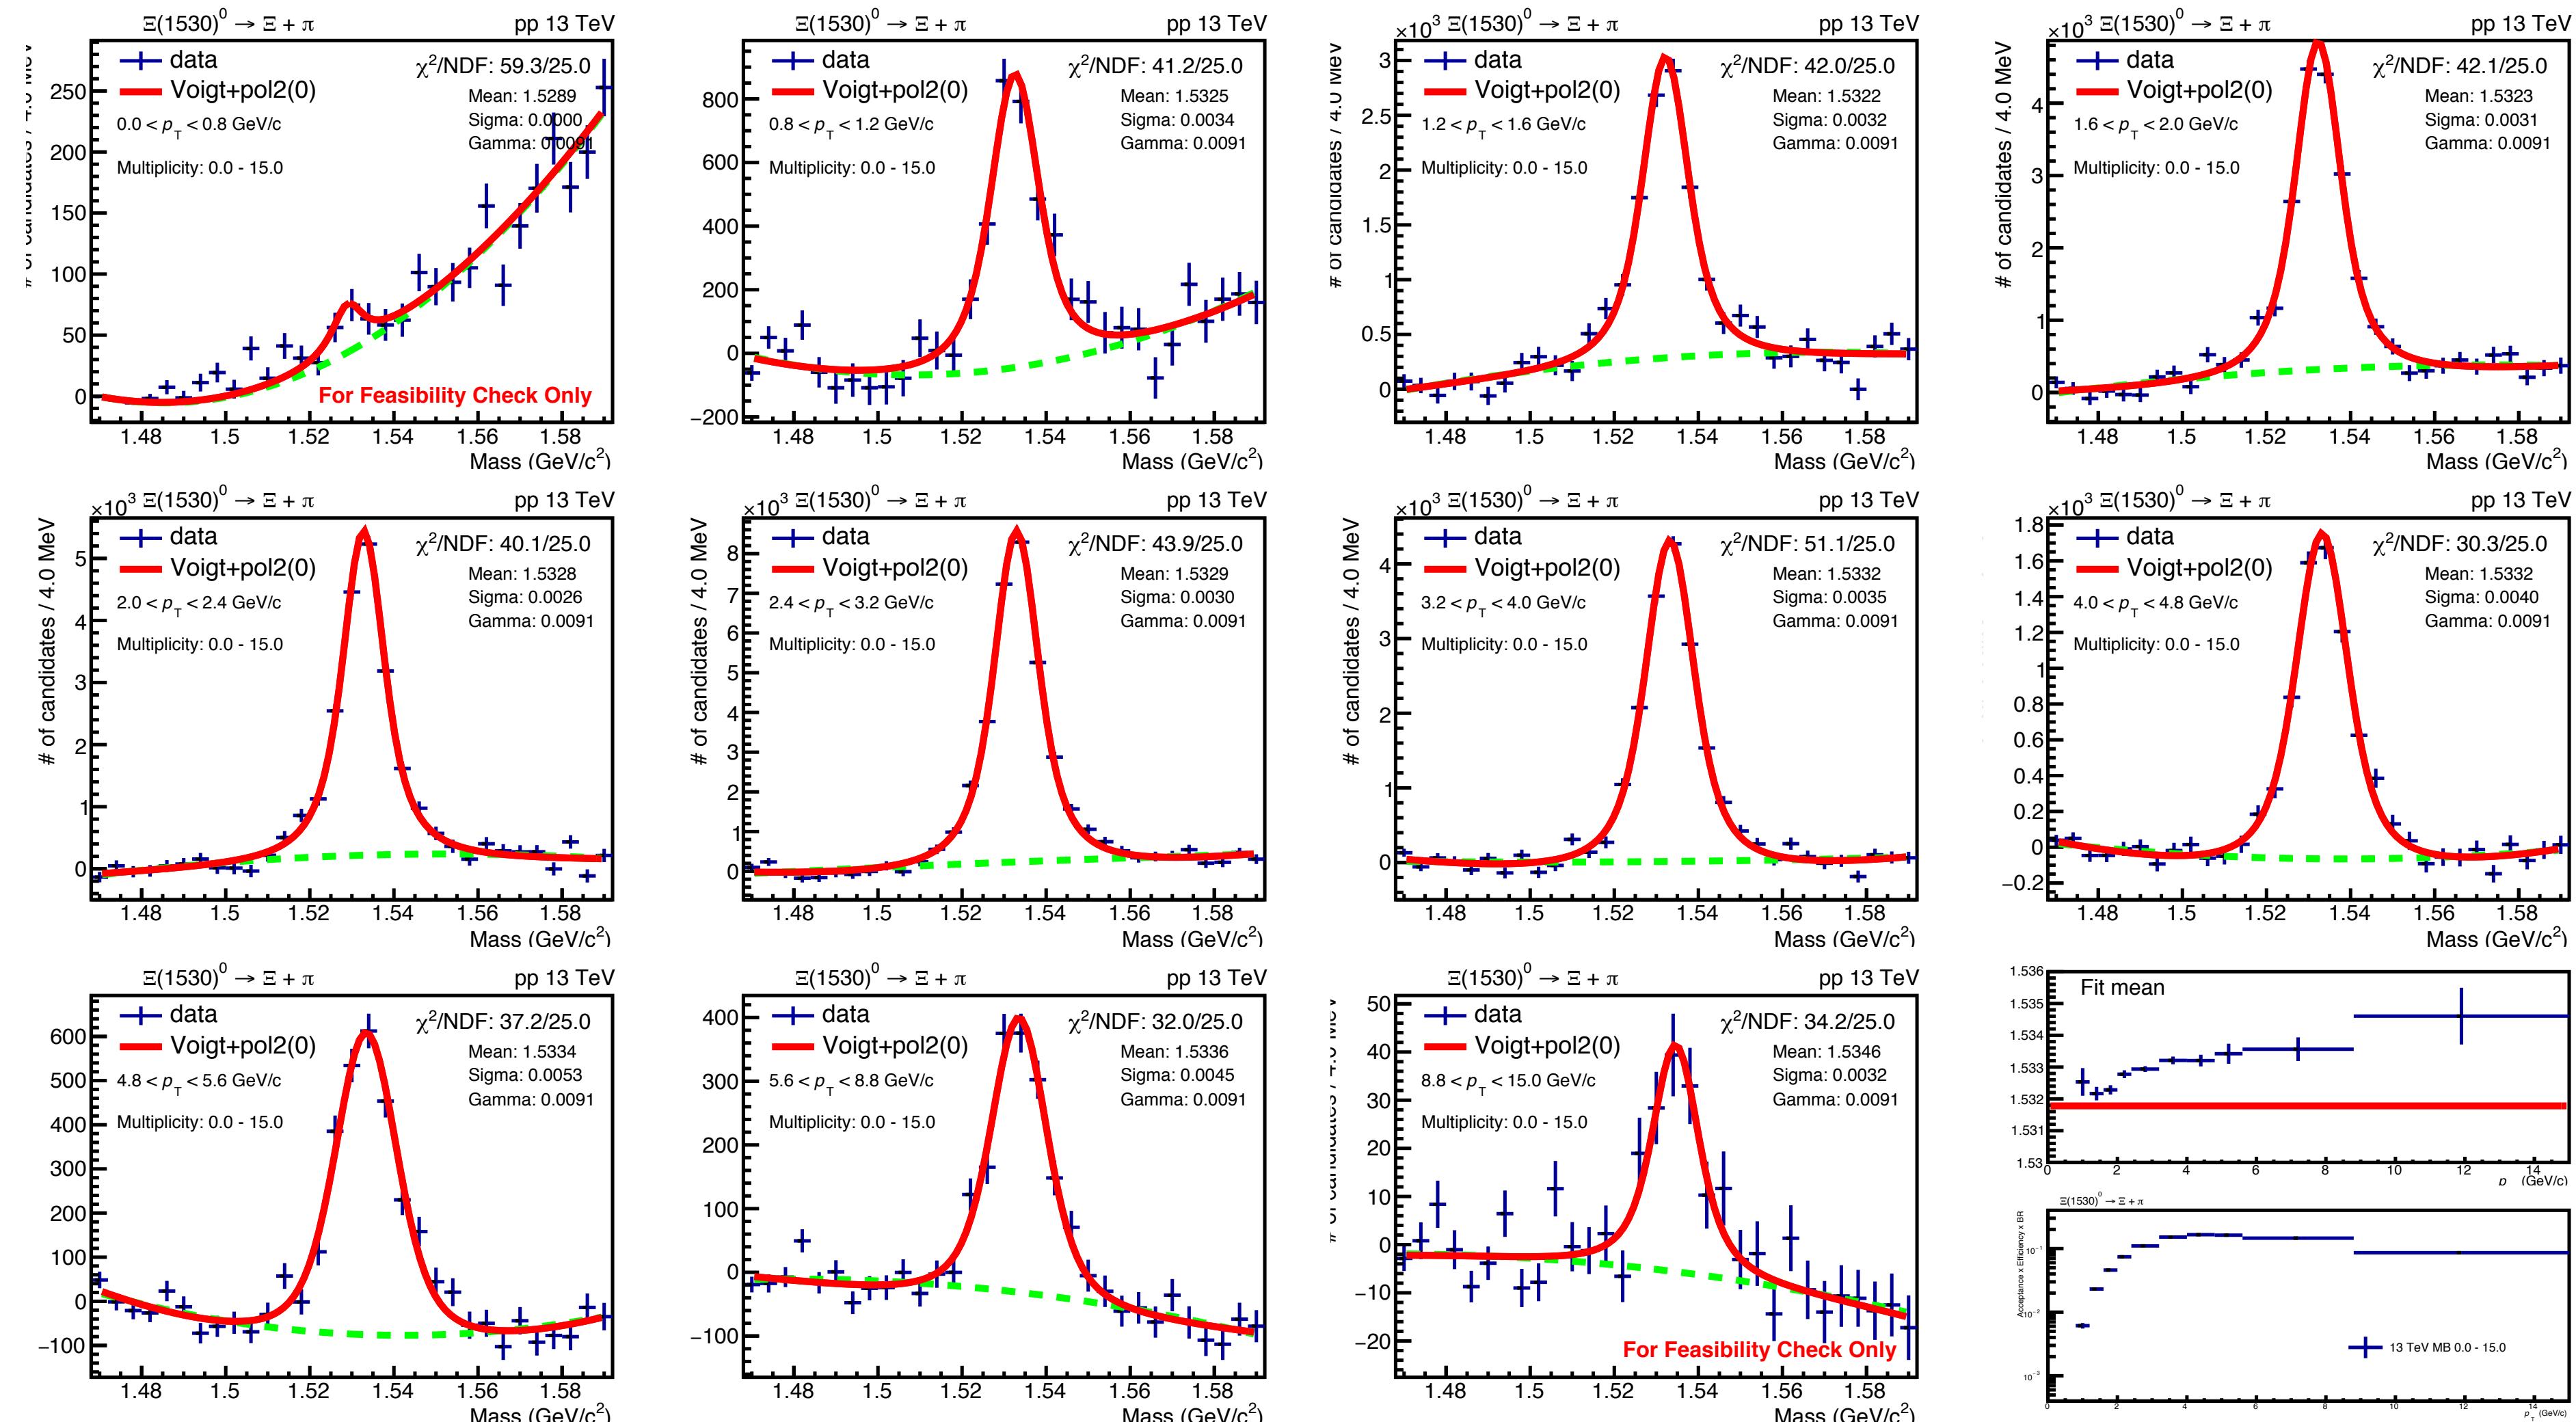

Event Selection → Track Reconstruction → MC Correction → Final Result

- Reconstructed Signal + Background (0-15%, 15-30%, 30-50%, 50-70%, 70-100%)

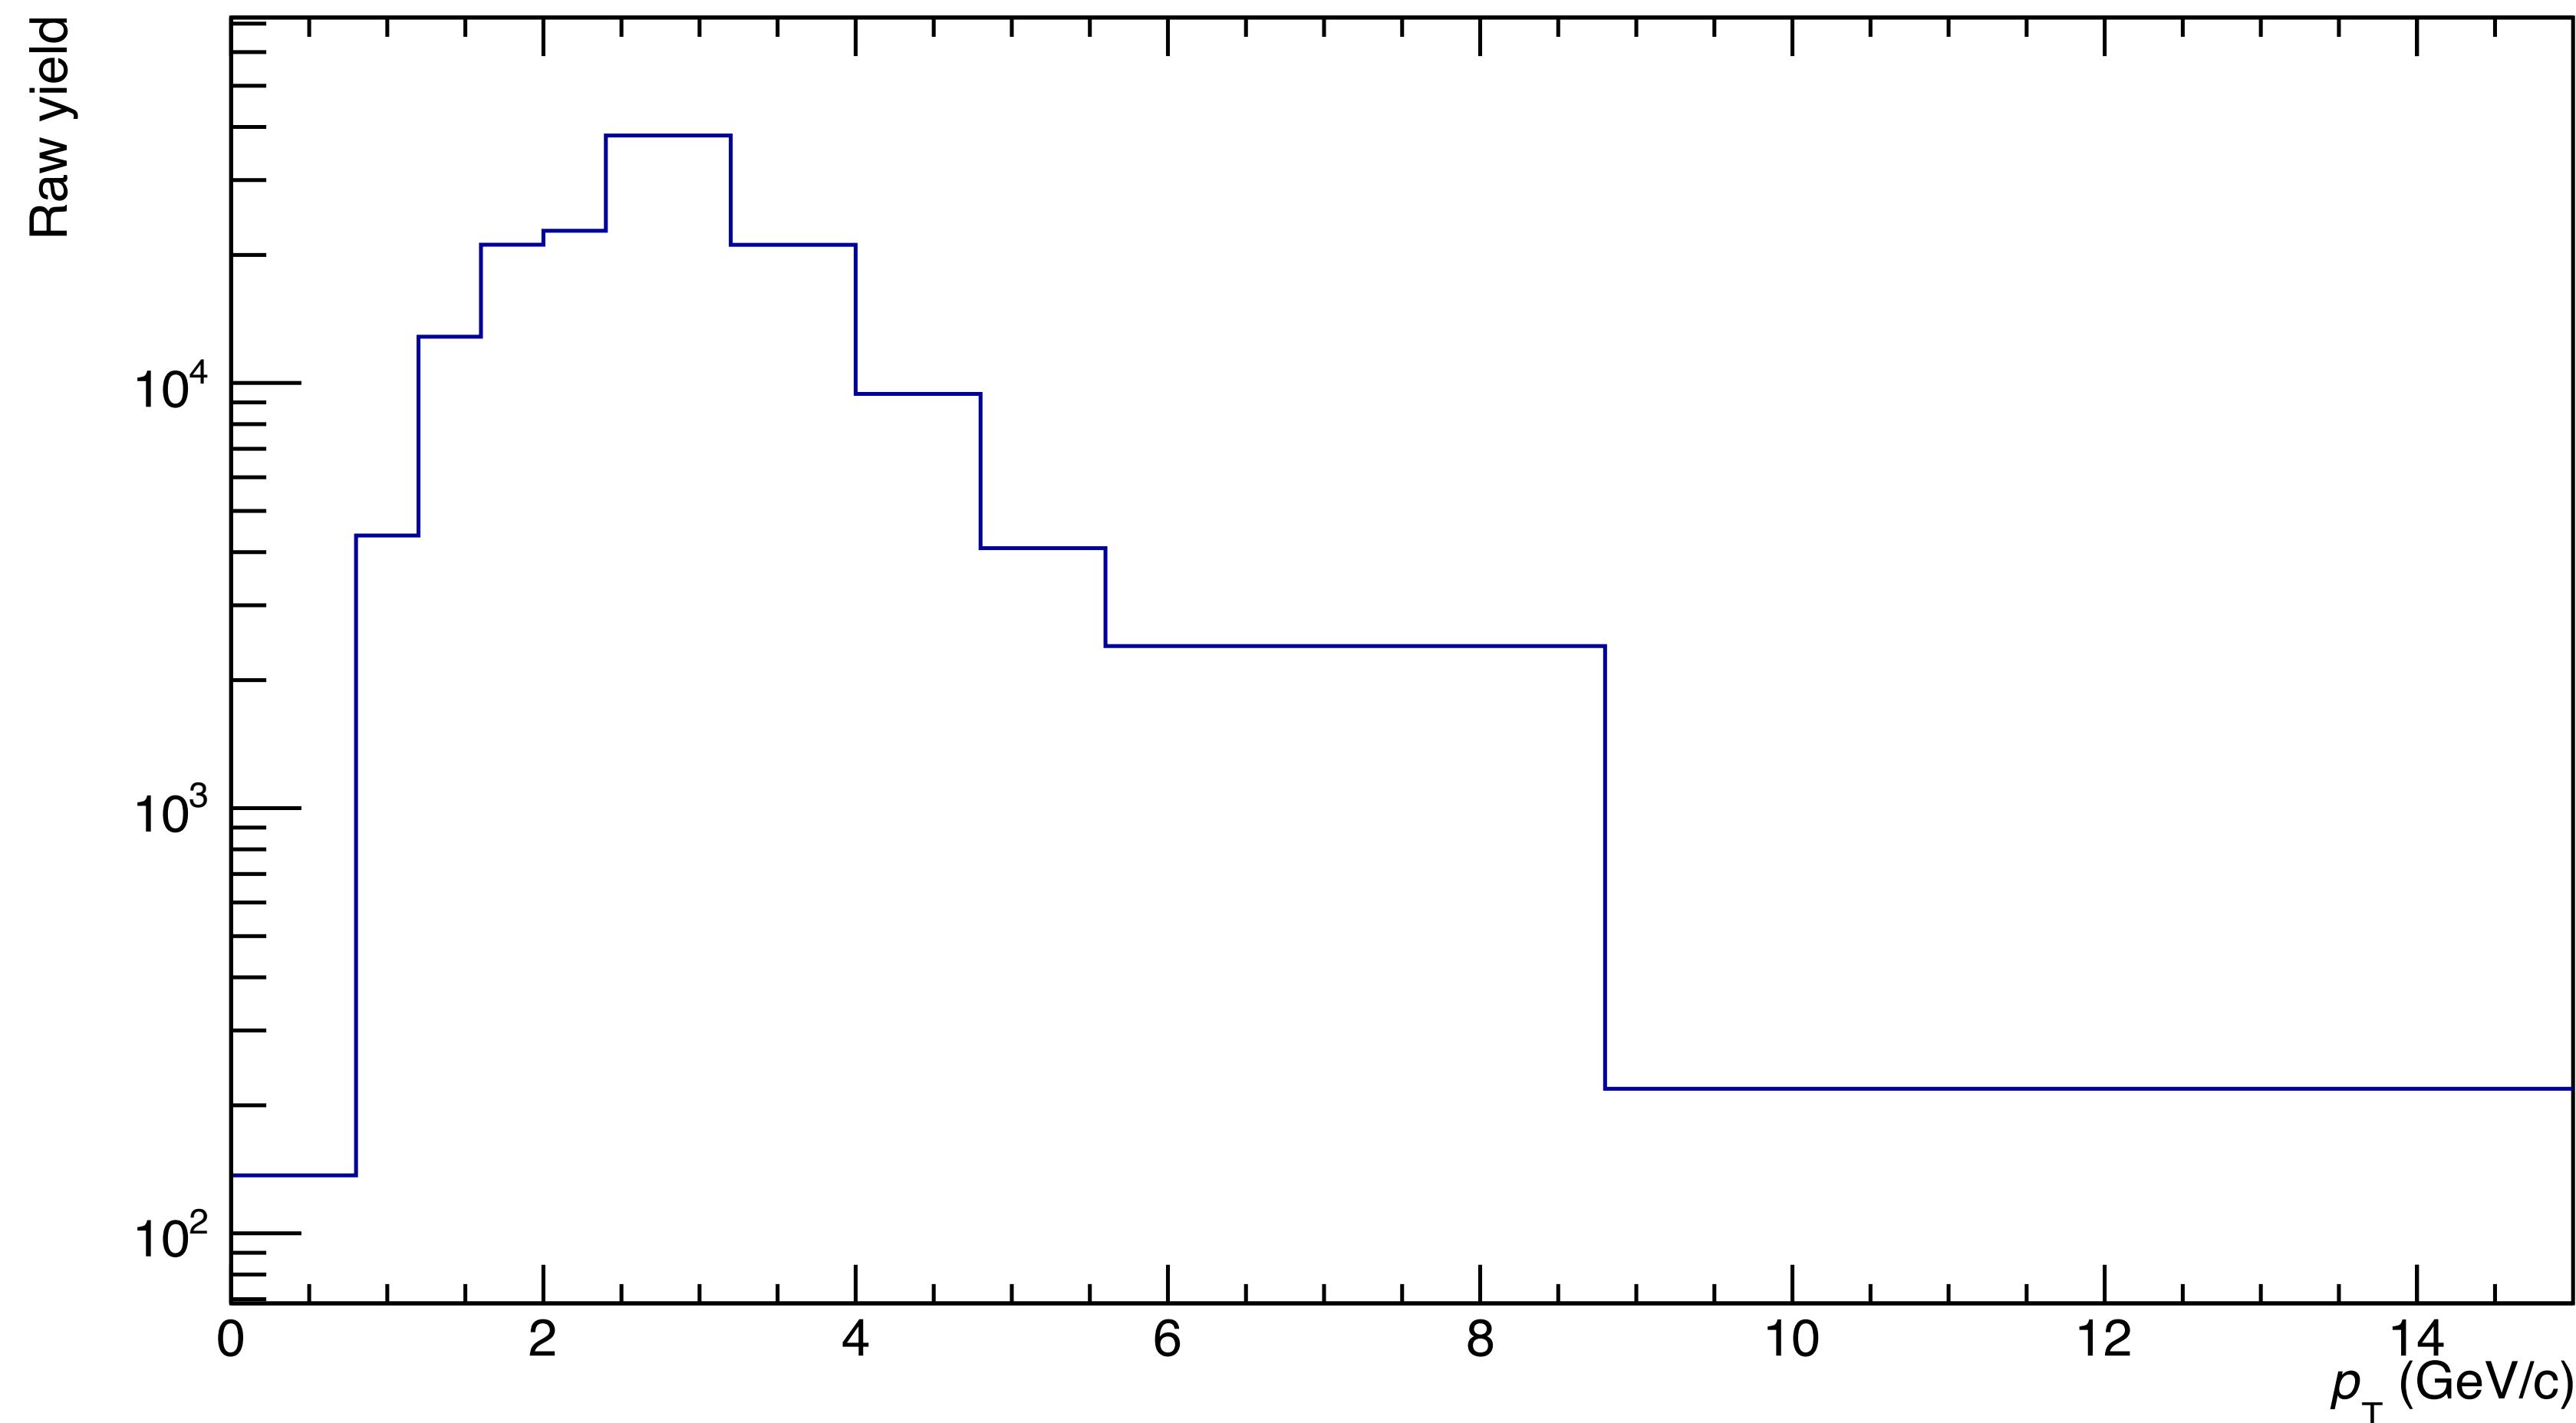

Event Selection → Track Reconstruction → MC Correction → Final Result

- Reconstructed Signal - Background, fit (**0-15%, 15-30%, 30-50%, 50-70%, 70-100%**)

Event Selection → Track Reconstruction → MC Correction → Final Result

- Raw yield distribution (0-15%, 15-30%, 30-50%, 50-70%, 70-100%)

Event Selection → Track Reconstruction → MC Correction → Final Result

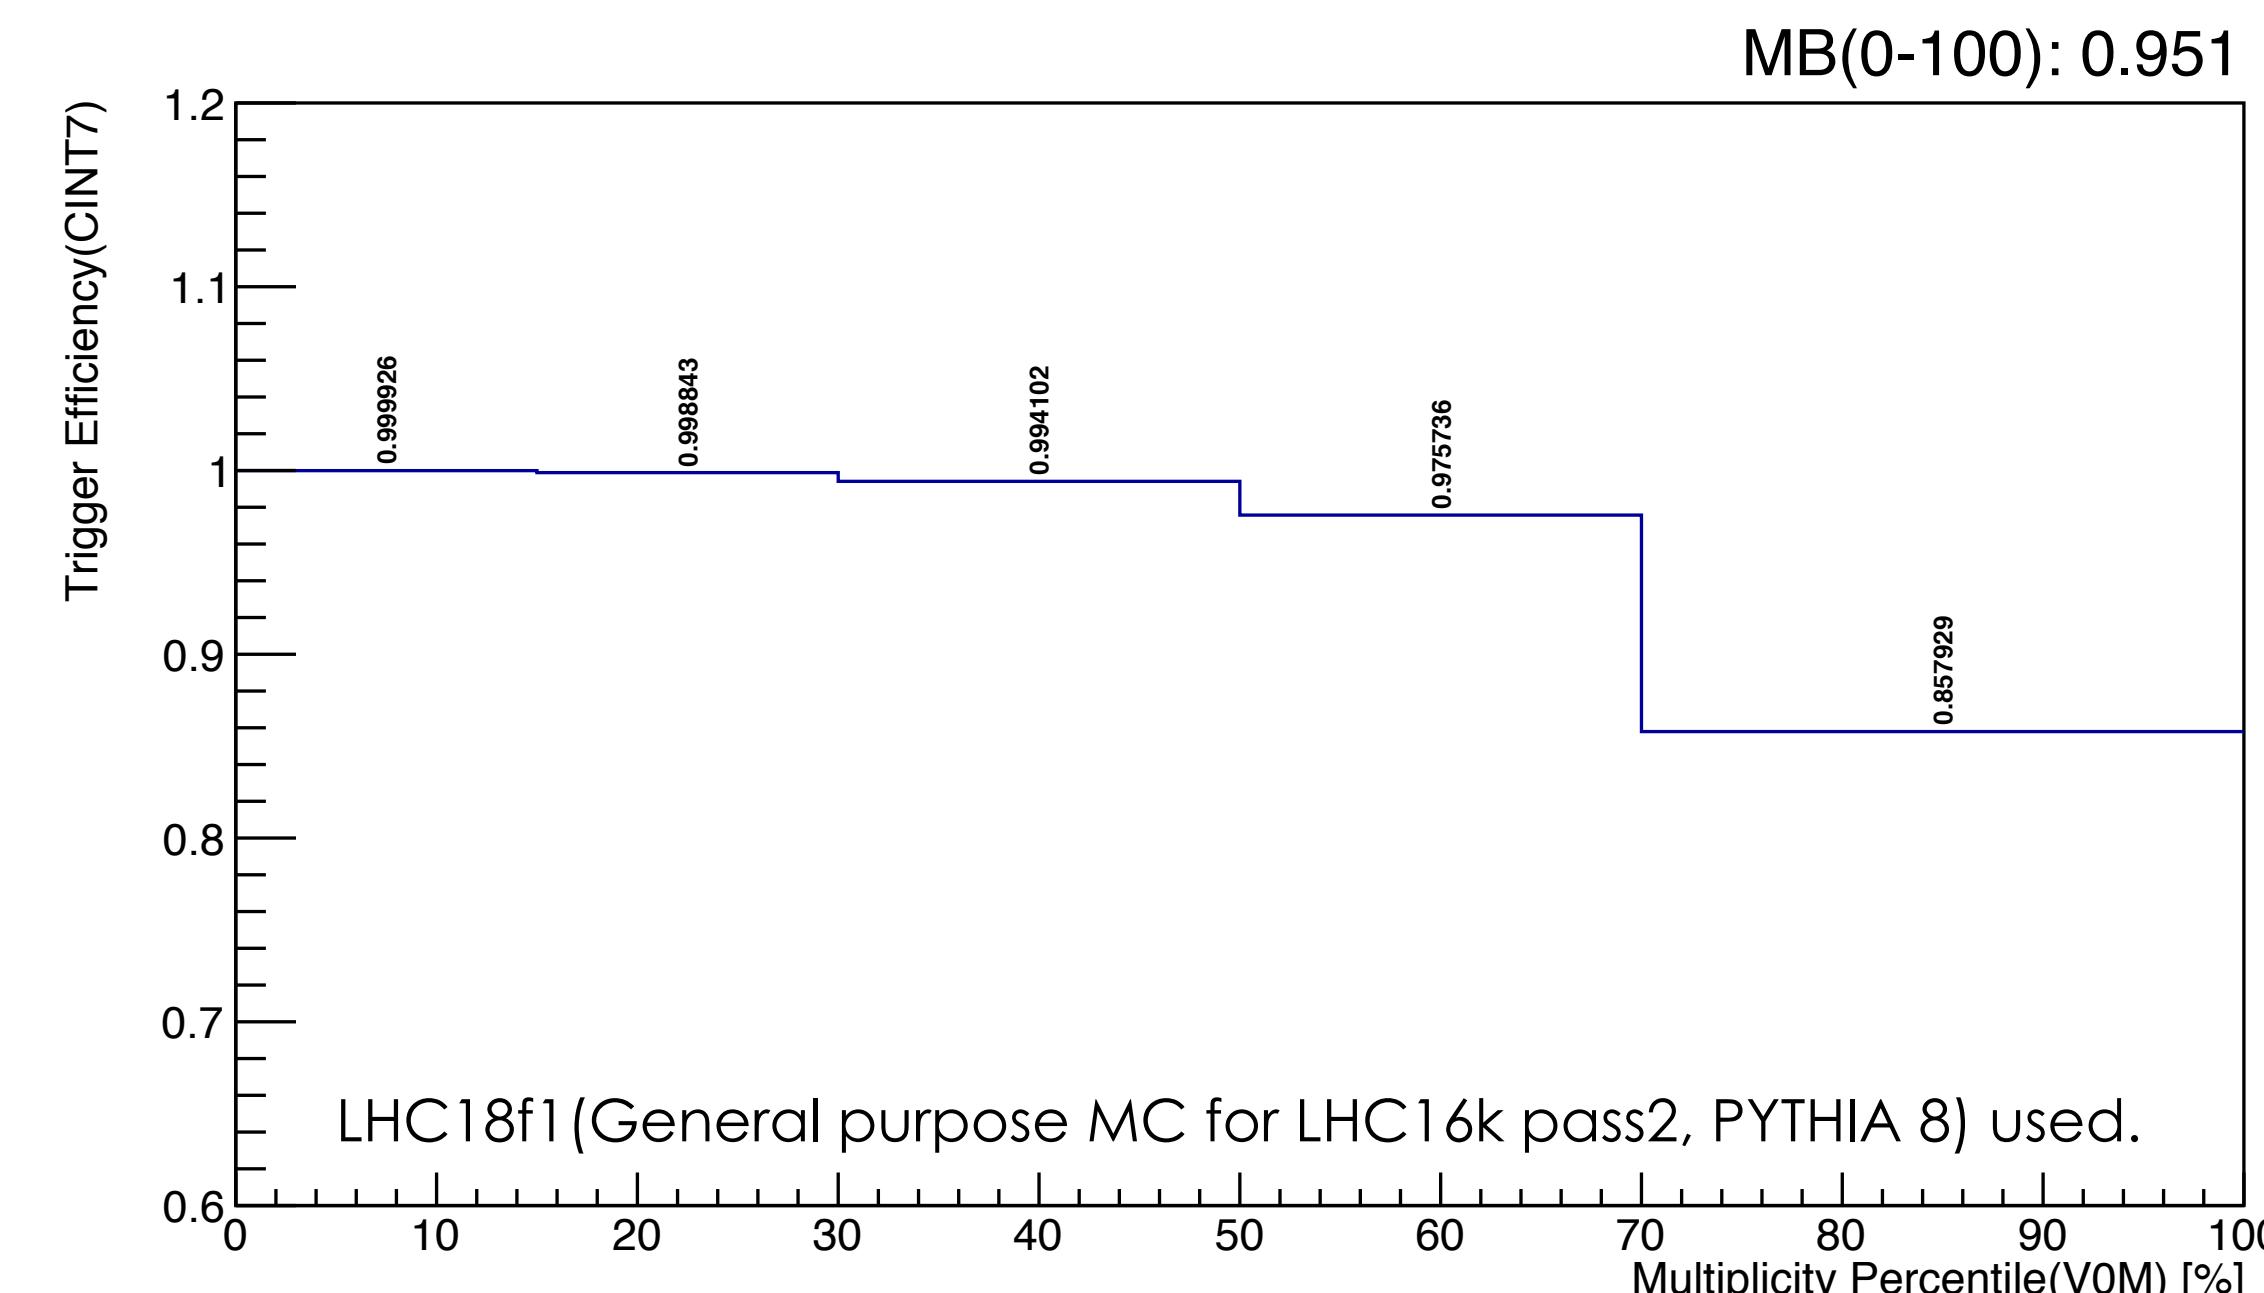

- Corrections:**

- **Trigger Efficiency**
- Reconstruction Efficiency
- Signal Loss

$$\frac{1}{N_E^{INEL>0}} \frac{d^2N}{dydp_T} = \frac{\epsilon^{trigg. INEL>0}}{N_{E,PhysSel}} \frac{N_{raw}}{\Delta p_T \Delta y \Delta Multiplicity\ percentile} \frac{1}{\epsilon_{MC}} \frac{1}{(S.L.)}$$

What we want to get Event Selection Reconstruction MC Correction

- **Trigger Efficiency:** # of triggered events / # of MC True INEL>0 events
 - 1.0 in Pb-Pb event, but pp case...

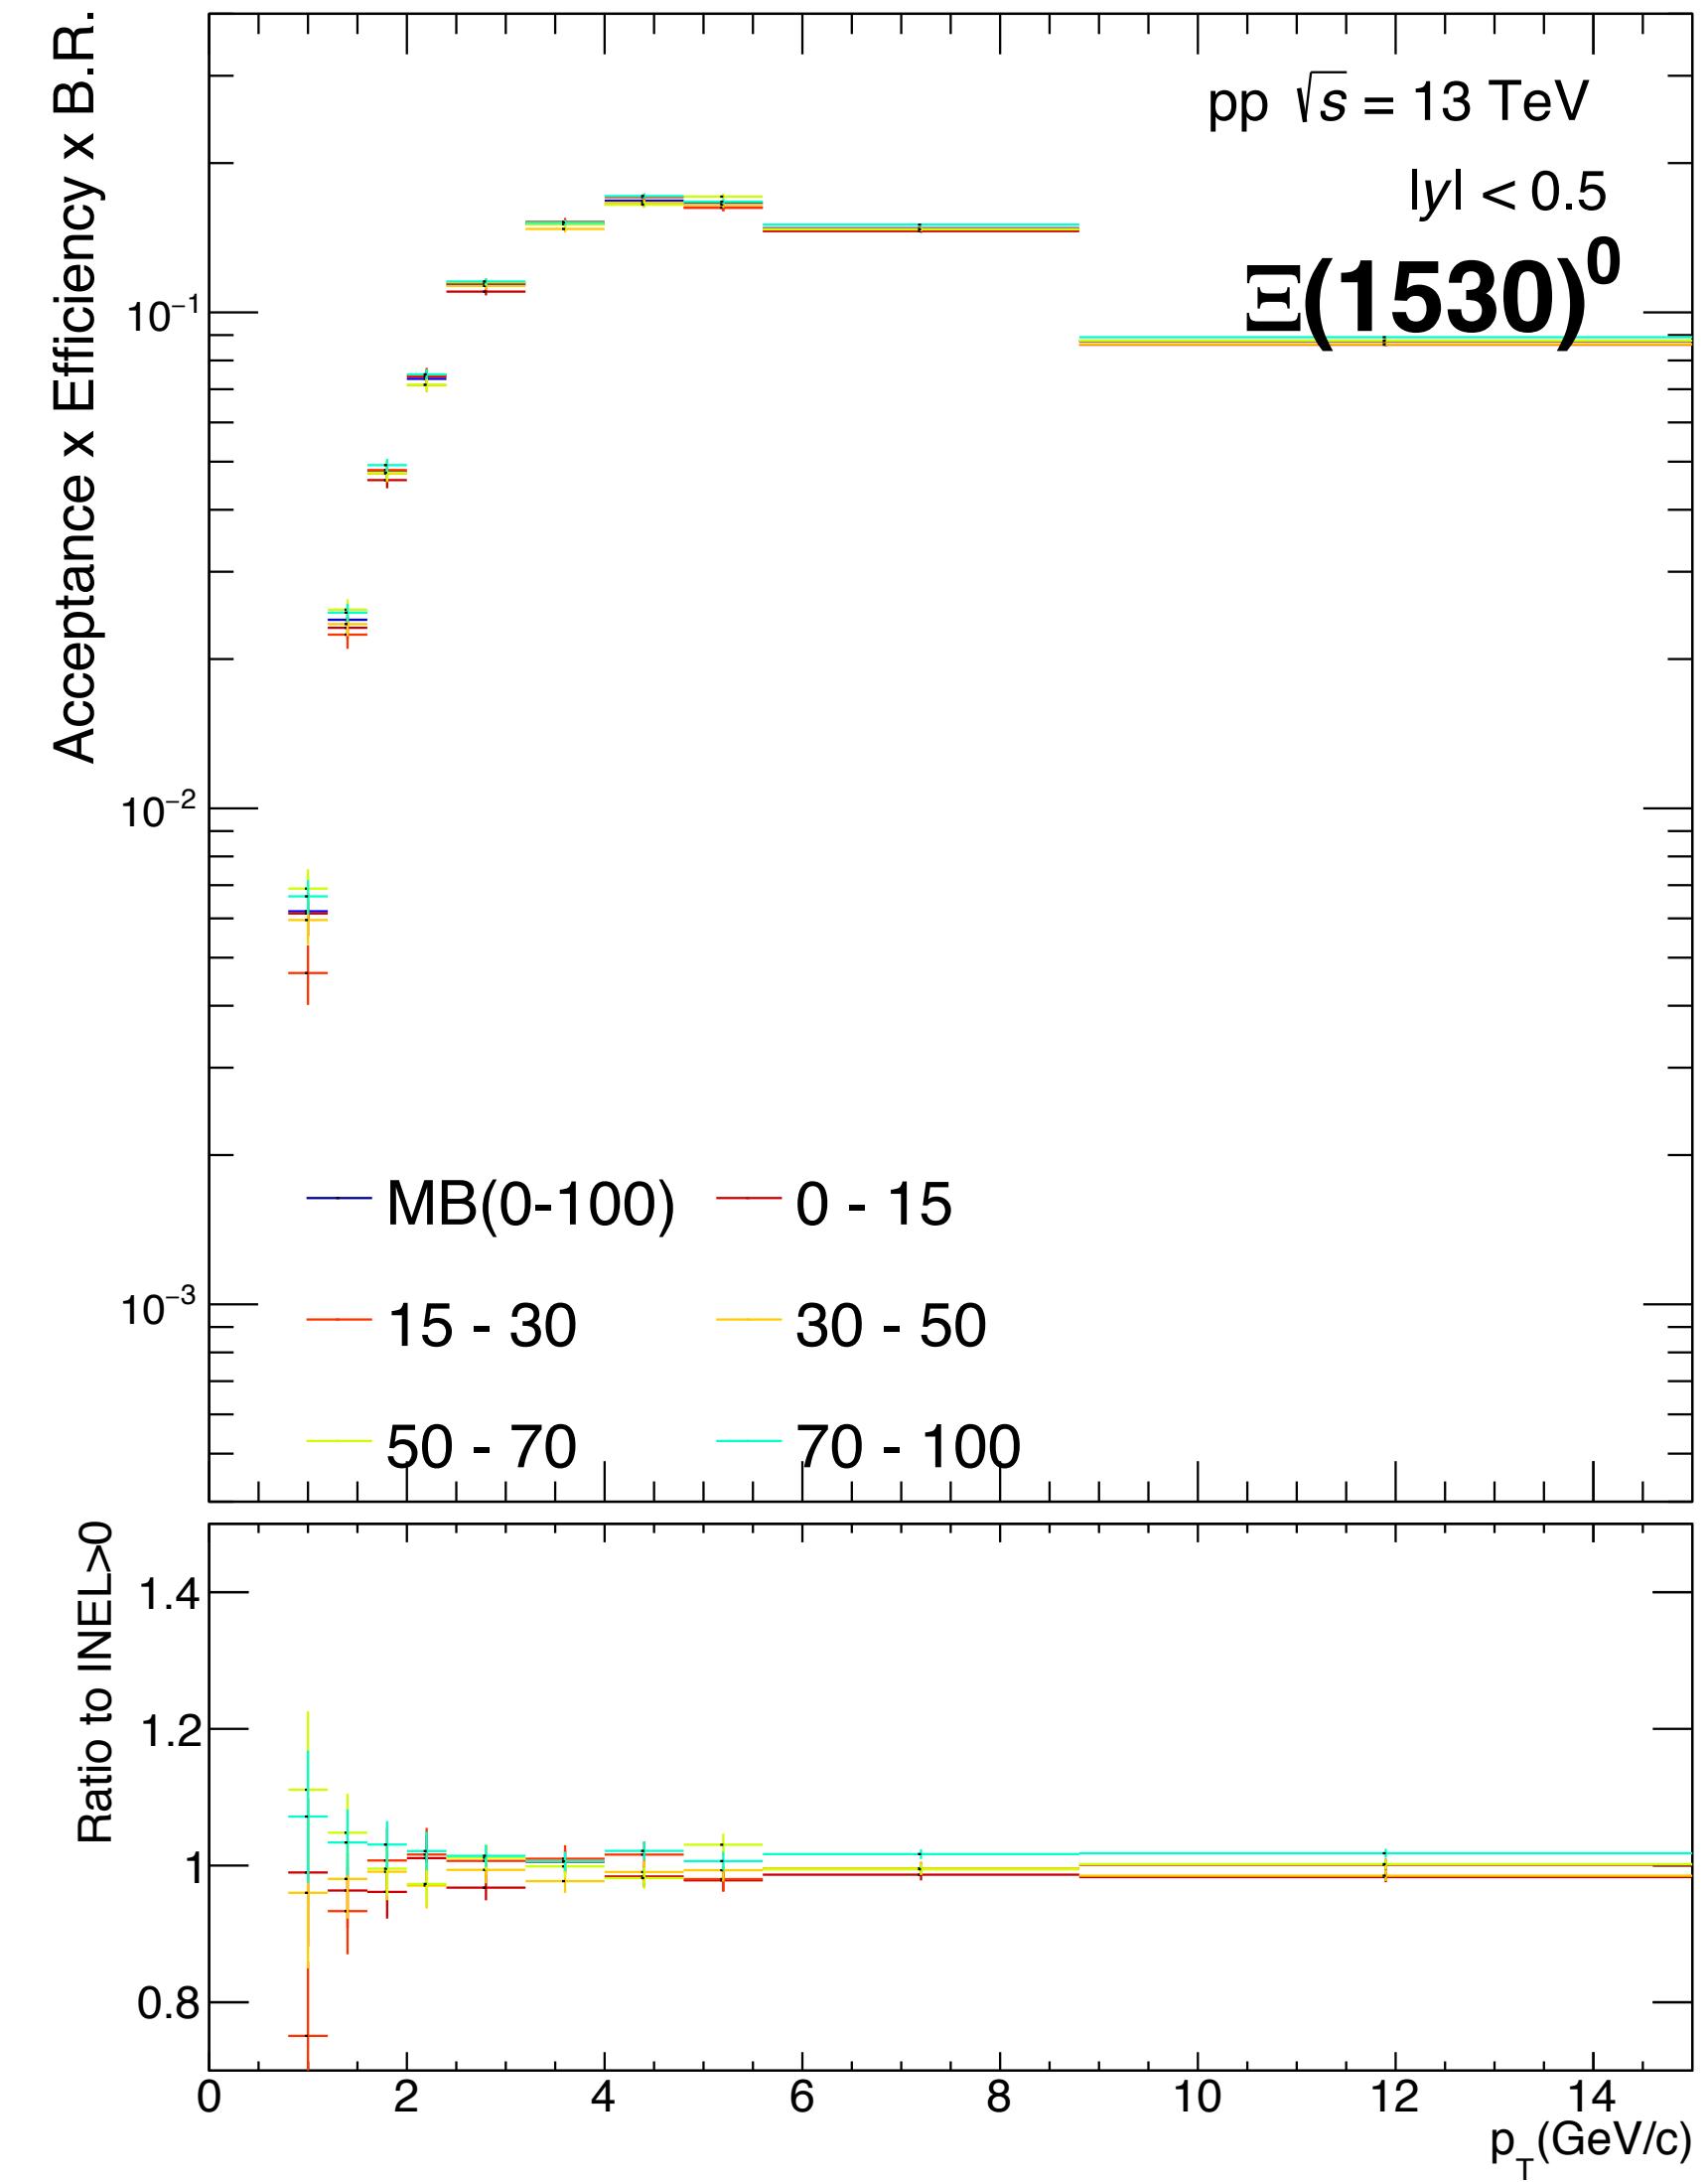

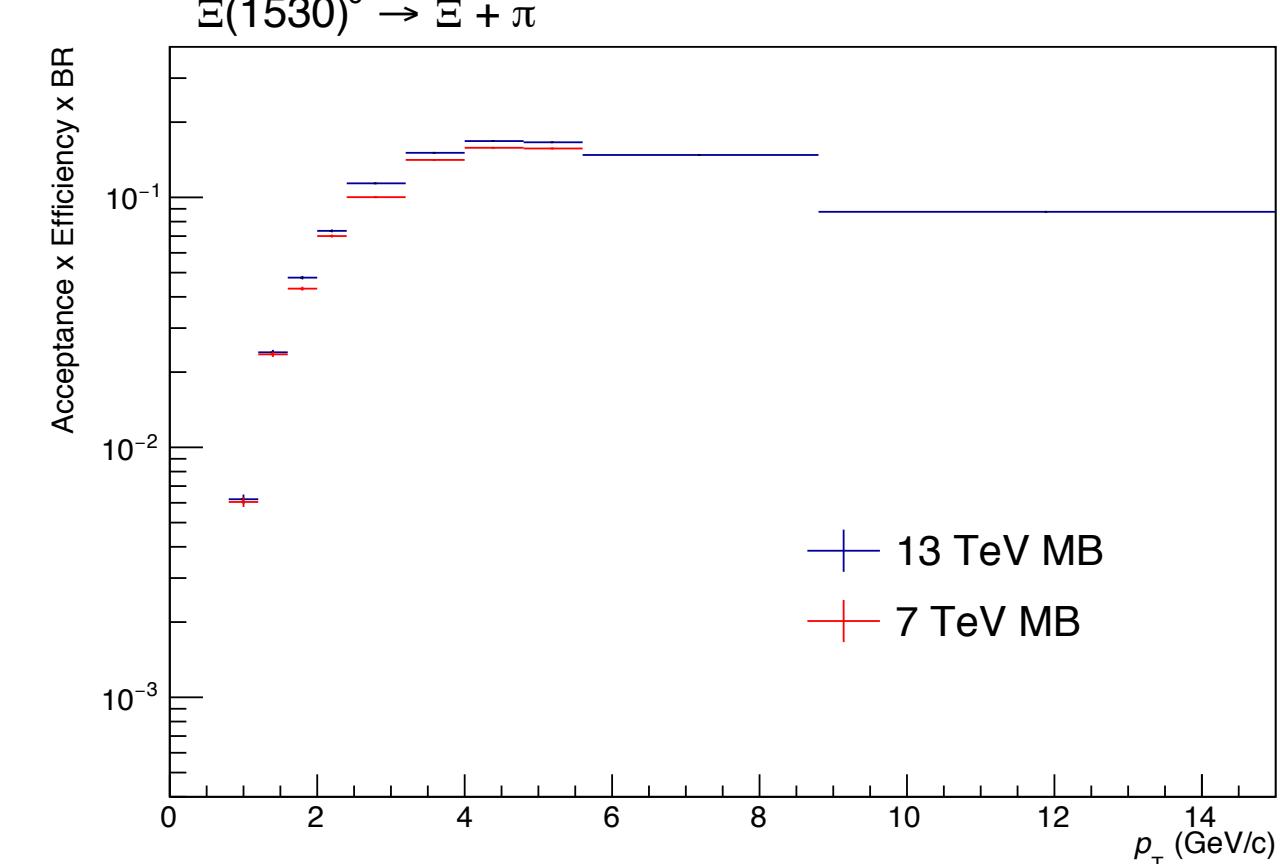

Event Selection → Track Reconstruction → MC Correction → Final Result

- Corrections:**
 - Trigger Efficiency
 - Reconstruction Efficiency**
 - Signal Loss
- Reconstruction Efficiency:**

of Reconstructed particle / # of MC True particle after Event Selection.

 - Acceptance and Branching Ratio are calculated together.
 - All Reconstruction Efficiency through several multiplicity bins are look.
 - Test data → **More statistic needed! / planed!**

Analysis Detail:

Event Selection → Track Reconstruction → MC Correction → Final Result

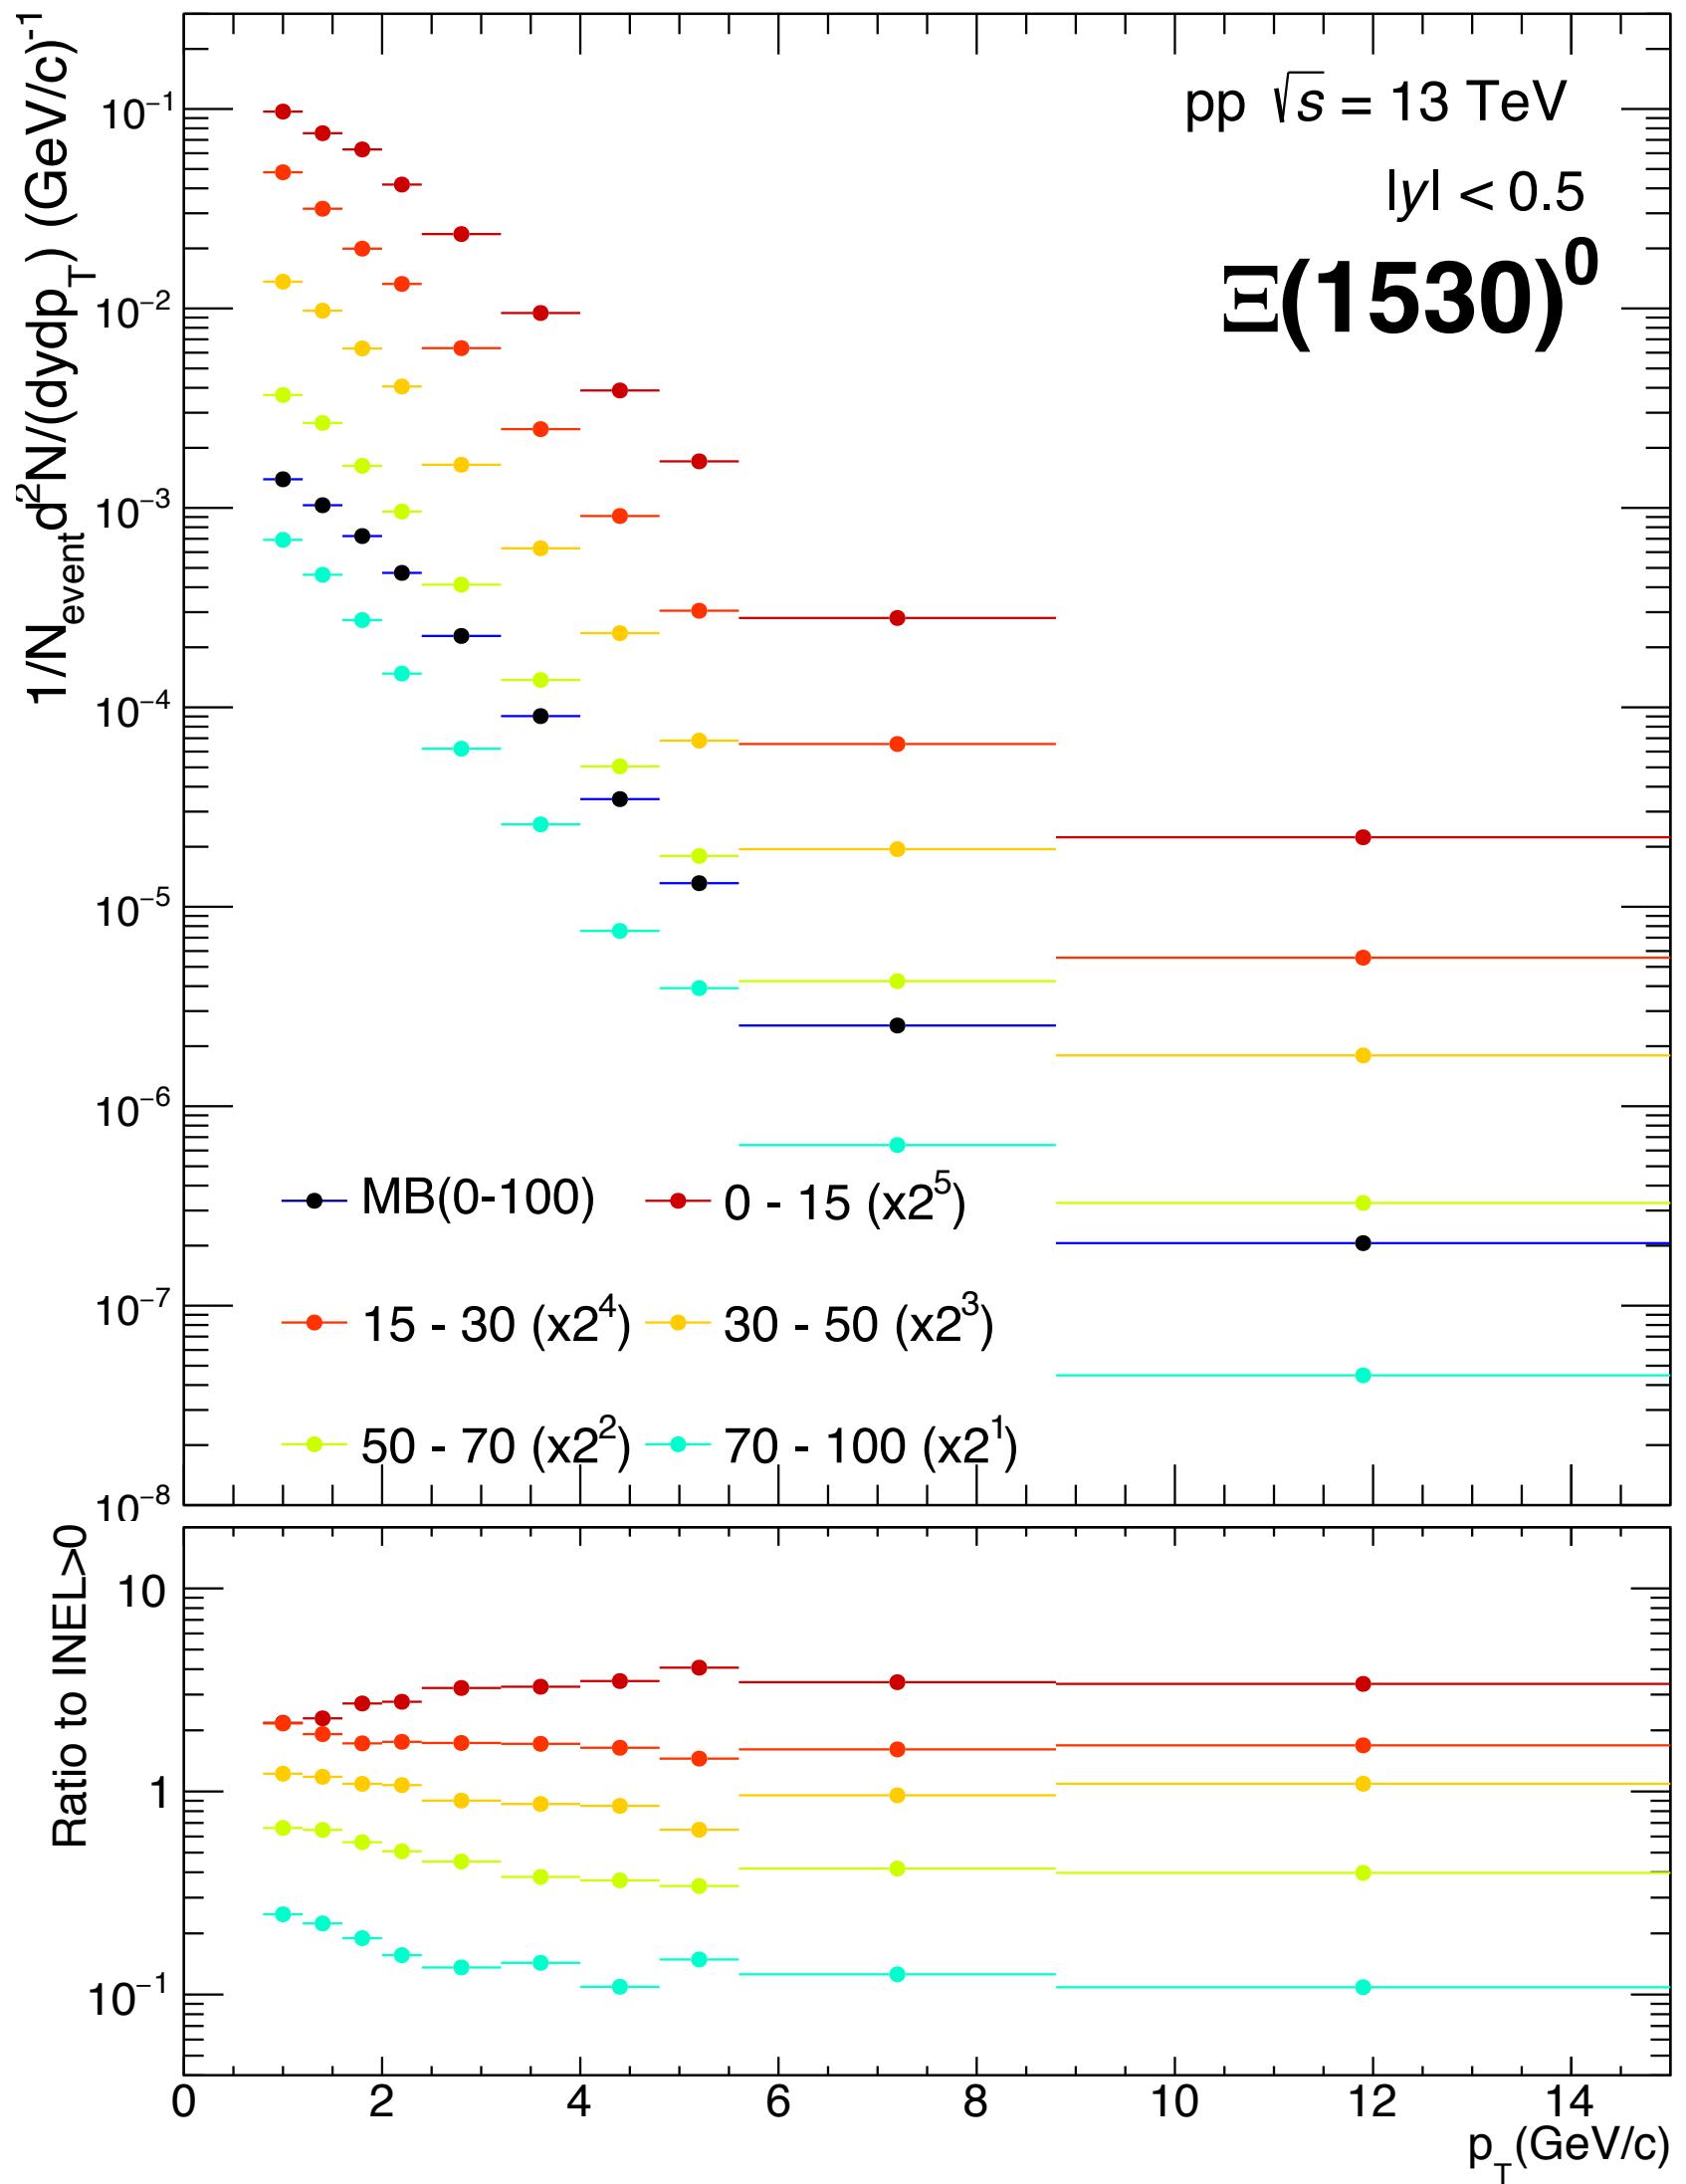

- **Corrected Spectra in MB(0-100%)**
 - Comparison with 7 TeV results ([Link](#))
 - Yields in 13 TeV have increasing trend, $\Xi(1530)^0$ also follow

Event Selection → Track Reconstruction → MC Correction → Final Result

- Corrected Spectra**

- With Multiplicity percentile bin: **0-15-30-50-70-100**
 - High Multiplicity results (**0-0.01-0.05-0.1**) will be added.
 - (issue) Error bar is not well describing errors from the Efficiency.
 - (Plan) Systematic Error will be added.

- Mainly moved to CERN, starting ALICE DATA Analysis
- A Lot of Central Shifts done, including Expert shift during PbPb period.
- Study on the multiplicity dependent $\Xi(1530)^0$ in pp 13 TeV
 - All procedures are explained: Event Selection, Track Reconstruction, MC Correction
 - MB/Multiplicity results are in final stage
 - Results are compatible with 7 TeV Results. (Efficiency/Yields)
 - Increasing trend through p_T observed, good agreement with other results.
- Outlook
 - High Multiplicity triggered data will be added soon.
 - Preparing Systematic Uncertainty Study

Thanks for your attention!!
